Foals of 1905, the progeny of Stallions duly nominated to be entered and named by midnight of Friday, December 15, 1905. Colts and geldings at \$10 each, fillies at \$5 each, the only forfeit if declared by December 15, 1906. If left in after December 15, 1906, and declared by April 20, 1907, colts and geldings to pay \$30 each, fillies \$15 each. If left in after April 20, 1907 colts and geldings to pay \$60 each, fillies \$30 each. Starters—colts, geldings and fillies to pay \$100 additional. The Westchester Racing Association to add \$5000, and the remaining 50 per cent of the stallion entrances of which \$1200 to the second and \$600 to the third. The nominator of the winner to receive \$1000 out of the subscriptions and starting money. Of the subscriptions for stallions, the nominators of the sires of the first, second and third horses shall receive 25 per cent, 15 per cent and 10 per cent, respectively. Colts to carry 122 lbs.; geldings and fillies 119 lbs. The produce of stallions which have not produced a winner prior to December 15, 1905, allowed 5 lbs., if claimed at time of entry. By filing with the Westchester Racing Association prior to December 15, 1906 an accepted transfer of the foal's entry, the original subscriber shall be released from liability as to the engagement of the horse, except for the original forfeit of \$10 or \$5. Five Furlongs.

Both the National Stallion and the Matron, as above, are to be run under the Rules of The Jockey Club and Westchester Racing Association applicable to the conditions of each and both of them, viz.: Rule 54, Par. III, Rule 63, Par. III Rule 72 and Rule 5.

SPAVIN CURE

Our Written Guarantee is a Legal, Absolutely Binding, Contract.
Read the Following and You will Understand and Appreciate Why.

NOTE THE DIFFERENCE IN DATES OF THESE TWO LETTERS.

PLANTERS HOTEL.

C. M. DAVIS, Proprietor.

Steam Heat. Rates, \$2 Per Day.
New Sample Rooms

LOUISIANA, Mo., Nov. 2.

TROY CHEMICAL CO.
DEAR SIR:—Inclosed find draft for \$5, for which please send me at once a bottle of "Save The Horse". It has done good work on my horses' Tendons, also Splints. But on a horse that has a Curb, I can't see that it has reduced or removed that much. Send medicine "Save The Horse" at once.
Yours,
C. M. DAVIS.

PLANTERS HOTEL.

C. M. DAVIS, Proprietor.

Steam Heat. Rates, \$2 Per Day.
New Sample Rooms.

LOUISIANA, Mo., Nov. 6.

TROY CHEMICAL CO.
GENTLEMEN:—The Curb on my horse that I was complaining about your medicine, "Save The Horse," not removing, has disappeared, as if by magic. It was of two years' standing. You can't tell he was ever curbed. Only used one bottle.
Yours truly,
C. M. DAVIS.

Positively and permanently cures Bone and Bog Spavin, Thoroughpin, Ringbone (except low Ringbone), Curb, Splint, Capped Hock, Wind Puff, Shoe Boli, Weak and Sprained and Ruptured Tendons, and all lameness.

"SAVE-THE-HORSE" is indicated for any enlargement, the result of an injury which leaves a thickened condition of the skin or tissues.

Cures without scar, blemish or loss of hair. Horse can be worked as usual.

Copy of guarantee, valuable booklet on diseases and injuries affecting horses and copies of personal letters from bankers, noted trainers, manufacturers and business men of prominence the world over, telling of the wonderful cures it made for them, sent upon application.

We advise frankly of possibility of remedy in any specific case. Give explicit particulars; state age, location of swellings, lameness and the way horse holds and carries the leg.

\$5.00 per bottle at all druggists and dealers, or express paid.

TROY CHEMICAL COMPANY, BINGHAMPTON, NEW YORK. Formerly TROY, N.Y.

State Agricultural Society

OCCIDENT STAKE OF 1908

TROTGING STAKE FOR FOALS OF 1905

To be Trotted at the California State Fair of 1908. Entries to Close January 1, 1906, with ALBERT LINDLEY, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1907; \$25 to be paid January 1, 1908, and \$50 thirty days before the race. The Occident Cup, of the value of \$400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six tenths; second colt, three tenths; and third colt one-tenth of the stakes. Five to enter, three to start. A horse not winning a heat in the first three shall not start for the fourth heat unless said horse shall have made a dead heat, but horses so ruled out shall have right to share in the prize according to their rank in the summary at the close of their last heat. Otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1908 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1906.

ALBERT LINDLEY, Secretary.

B. F. RUSH, President.

San Francisco, Saturday, December 9, 1905

THE GREAT BROOD MARE ELSIE, by Gen. Benton, died at the farm of her owner, Mr. Geo. A. Cressey of Modesto, on the 26th day of last month. She had lived more than twenty-three years and produced fifteen foals. The cause of her death was pneumonia. Old Elsie was a famous mare and the history of the standard bred horses of America will never be complete without many allusions to her and her produce. She was bred at the famous Palo Alto Stock Farm, and was sired by Gen. Benton, her dam being the great brood mare Elaine, half sister to the mighty Electioneer. Elaine was not only a champion trotter of her day, being the fastest three-year-old of 1877, and the fastest four-year-old of 1878, but was a great producer in the stud, her lists of standard trotters numbering five, among them being the fast stallion and sire Iran Alto 2:12½. Elsie was Elaine's first foal and was put to breeding as a four-year-old. She was a handsome big chestnut mare, with small star and near hind ankle white, standing full sixteen hands. Her first foal was a filly by Piedmont 2:17½ that died. She was returned to Piedmont that year and in 1888 produced a colt that was called Salvini and took a record of 2:30. Her next foal was the filly Novelist by Norval 2:14½, that took a two-year-old record of 2:27. Elaine failed to produce a foal in 1890, but the following spring foaled the bay colt Rio Alto by Palo Alto that afterwards took a trotting record of 2:22½, and a pacing record of 2:16½. In 1892 her foal was a filly that was named Mary Osborne and trotted in 2:37 as a yearling and in 2:28½ as a two-year-old. She was by Azmoor 2:20½. Elaine's foal of 1893 was the chestnut filly Palita, two-year-old record 2:16, by Palo Alto. The following four years her foals were Ellen Houser by Truman, Elsidor by Azmoor, Eligido by Altivo, and Elsie Mac by McKinney. The last named died. Elsie failed to produce a foal in 1898, but was bred again to Azmoor that year and in 1899 foaled a bay colt that was afterwards gelded. In 1900 she was again barren, and the following year produced a filly by Mendocino.

At the Palo Alto sale of brood mares held at William G. Layng's Occidental Horse Exchange in this city January 30th, 1902, Elsie was among those catalogued. A few hours before the sale she gave birth to a fine bay colt in her box stall. The mare and foal were knocked down to the late Henry Pierce of the Santa Rosa Stock Farm for \$775. A few minutes later Mr. C. A. Durfee purchased this colt from Mr. Pierce for \$387.50, to be delivered when the colt was weaned. That colt is now known as Galindo, and is one of the most promising young horses in California. Mr. Pierce bred Elsie to his stallion L. W. Russell and she produced a fine colt, now a two-year-old. The mare and foal were sold to Mr. Geo. A. Cressey of Modesto. He bred Elsie to Chas. Derby and the produce is a fine weanling. This year she was bred to Bonnie Direct 2:05½. Although she had lived to a greater age than the majority of brood mares reach, she was a well preserved mare up to this season, and it was thought she would live to produce several additional members of her already numerous family. She has given to the trotting world five standard performers, one producing son and three producing daughters, and her blood is breeding on.

BON VOYAGE, the fastest three-year-old trotting colt of this year, with a record of 2:12½, winner of the Horse Review and Kentucky Futurities of 1904 and the Hartford Futurity of this year, and owned by Mr. W. A. Clark Jr., will make the season of 1906 at Agricultural Park, Los Angeles, at a fee of \$50.

Bon Voyage was the fastest two-year-old colt of 1904 and three-year-old colt of 1905. He was bred by the well-known veteran trainer and breeder, Chas. Marvin of Lexington, Kentucky, who raced him as a two-year-old, gave him a record of 2:15 in the two-year-old division of the Kentucky Futurity which he won, and then sold him to Mr. Clark for \$10,000. The breeding of Bon Voyage is a study worth while to those who interest themselves in pedigrees. His sire, Expedition 2:15¾, is one of the most fashionably bred sons of Electioneer, being out of Lady Russell, who is credited with five other standard performers, and was by Harold, her dam the renowned Miss Russell, the dam of Maud S. 2:08¾, Nutwood 2:18¾, and five others in standard time. On the maternal side he springs from another great family. Bon Mot, his dam, is also the dam of Endow (2) 2:14¾, who holds the world's record for a two-year-old trotting gelding, and, besides, has produced Bequeath (2) 2:23, (3) 2:20¾—both by Cecilian (2) 2:22. Bon Mot was by Erin 2:24¾, a son of Belmont 64, and her dam was Farce 2:29¾, a daughter of Princeps. This is a very choice combination of the best speed producing blood lines, and one that will undoubtedly commend itself to the progressive breeders of this State. Bon Voyage will be in charge of Mr. J. O. Gerrity, 4607 Agricultural avenue, Los Angeles, to whom all communications should be addressed.

THE FIRST holiday paper to reach our desk this season is The Breeders' Gazette of Chicago, a journal that stands at the very head of its class, and is more widely read than any paper devoted to live stock interests in this country. This edition is beautifully illustrated with half-tone engravings of cattle, sheep, and other farm animals and contains much that is interesting and of value to the live stock breeder. The cover page is by the well known artist F. Whitney, and is most artistic.

CHAMPIONS TO BE OUT IN 1906.

Dan Patch, against his own world's record, which embraces all the choice marks from a quarter of a mile to two miles, sulky and wagon included, coupled with Cresceus, champion trotting stallion of the world, will be the double bill offered as an attraction at harness meetings within another year.

The purchase of Cresceus recently by M. W. Savage, owner of Dan Patch, has been followed by his statement that the trotting champion and the present king of pacers will be sent on a tour which will be noteworthy for the first time in harness history that a pacing king and a champion trotting stallion have been exhibited against time together.

Cresceus still clings to the world's stallion record for trotters. During the 1901 grand circuit season he hung up a mark of 2:02¾, which reduced the then world's standing mark held by The Abbott, which was not lowered until Lou Dillon commenced her marvelous series of performances which placed the best time first at 2:00, then at 1:58½, which still holds as the world's record, wind shields not barred.

But Cresceus' claim to stallion honors holds good, and there are many horsemen who believe that there is still a faster mile in the "monarch of the home stretch," and that Trainer Hersey, who has proven himself one of the greatest conditioners and drivers in the world, will be able to bring him to the post fit to trot better than ever.

BOARD OF APPEALS, N. T. A.

At a meeting of the Pacific District Board of Appeals held at 36 Geary street, on Thursday of this week it was ordered that the mare Norda be released from suspension and that the money paid by G. W. Bonnell for removal of this suspension against the mare be returned to him, and that Sanford & Donahue, who entered her without authority, be held suspended. It was also ordered that F. E. Wright be returned the \$50 fine imposed upon him at the Los Angeles meeting and that suspension against him be released. Mr. Wright was fined at the Los Angeles meeting last July, but the fine was not collected and he was told by officers of the association that it was remitted. This they had not the power to do under the rules, so Mr. Wright paid the fine under protest.

BETTER GET THE PAMPHLET.

The ailments of stock are now so closely studied by specialists that we may expect a new and more effective class of remedies than has been available in the past. One of these, we believe, has already arrived. It is Craft's Distemper & Cough Cure, advertised in another column. This remedy is not a cure-all but is intended only for the cure of distemper, epizootic, pink eye, coughs and ailments affecting the mucous surfaces. This remedy is endorsed by thousands of the leading horsemen, and is always sold under a guarantee of money back if it fails. This is a remedy that may at any time be worth hundreds of dollars to stock owners, and our readers should be familiar with it. If you will write at once, mentioning this paper, to the Wells Medicine Co., 13 Third street, Lafayette, Ind., a copy of "Veterinary Pointers," a valuable pamphlet, will be sent you.

Molle S., 2:16¼, by Anthedon, owned by George Thompson, DeKalb, Ill., has sent to J. B. Chandler at Louisville. She is an extremely fast trotter and a candidate for 2:10 honors.

The man who thinks the judges are always wrong, and himself always right, is usually the fellow who lost the race.

MONTANA NEWS.

In the death of Hon. Frank G. Higgins of Missoula an enthusiastic horseman has been lost to Montana. During the past few years the health of Mr. Higgins has been such that he could not participate in racing as he wanted to and his horses were idle. During his racing career the Higgins Bros. owned some of the very best horses in the Northwest. Ruby H., thought to be one of the fastest of green pacers, was recently taken to California by Chas. Jeffries, and there are others at Missoula now. In the past Higgins Bros. have owned such horses as Irino Trlx, Rena N., Bill Howard, Midget, St. Croix, etc.

Frank G. Higgins was born in Missoula in 1863, his father, Captain Higgins, owning what is now the city of Missoula. Few men were more highly esteemed among pioneers than was Captain Higgins. Frank Higgins was the first native born Montanan to sit in the legislature and the first to be elected to a state office.

Cy Fleming of Spring Lake Farm has returned from Canada, where he sold a car of young horses, sired by Bob Fitzsimmons 2:07¾, p. This is the second shipment of Fitzsimmons colts sold at Portage la Prairie, and they brought fair prices. Mr. Fleming states that all the colts sold a year ago are coming along nicely and that there is a great deal of interest in the harness horse throughout the Northwest. Pacers are plentiful, but trotters are as scarce there as here.

Rita Huber, Senator Hoffman's pacing mare, has gone to the trotting gait, and is being worked that way. Joe Huber states that the mare will be entered in the trots next year and that she is moving along naturally at the new gait.

R. C. McFall, owner of Floy Direct, was in Helena a few days ago after the mare Josephine, and has taken her to Great Falls. The mare went wrong last year at Bozeman, and for a time was very lame, but she seems all right now and has been taken to Great Falls. She has a world of speed and there are some good horsemen who believe that she is as good a race mare as Montana has.

Higgins & Little of Helena, having sold Modicum 2:13¼, p., have bought the trotter Howard L. from James Donovan. He is a very level gaited young horse and is a first class racing prospect. He is by Prodigal—Stockman and Farmer.

MR. RUDOLPH SPRECKELS' PONIES TO RACE.

The running turf has gained a new recruit on this Coast entirely through the development of the California Polo and Pony Racing Association. President Rudolph Spreckels having seen his chance, with green fleur de lis and cerise sleeves and cap, carried to victory in the pony races, has determined to try the bigger game for the pleasure it will afford him to see his thoroughbreds run.

His horses have been training at Ingleside, and as the next meet of the Polo Association is some weeks off he will test their speed in faster company than that in which they have been running. The horses have been carrying 150 pounds and upward in the Polo Association races. What they will do with feather-weight jockeys up is a problem Mr. Spreckels wishes to see solved.

The horses which will sport his colors are Uetma, a bay mare by Salvador-Lightning; Althomer, a chestnut mare by Homer-Altivo; Cariolly, a chestnut mare by St. Carlo-Folly, and Honoma, a chestnut mare by Homer-Noma.

That the people of California are interested in having the State built up with a good class of citizens is evidenced by the numerous responses from the notices printed in this and other papers over the State, asking that names of Eastern friends be sent to The California Promotion Committee, at San Francisco. The committee has received hundreds of answers and has sent literature and personal letters to all of the parties named in the responses. Already a partial result has been attained as some answers have been received from the Easterners who are sitting close to their fires when they received the literature telling of the balmy climate in California and showing some of the wonderful productions of the State. It is estimated by the California Promotion Committee that these letters will be the means of bringing a large number of new settlers to California within the next year. Let the good work go on. If you have any friends or acquaintances in the East who you think would make desirable citizens for California send their names and addresses to the California Promotion Committee, 25 New Montgomery street, San Francisco, and that organization will do all in its power to make your friends fall in love with California and come out here to live.

"THE BEST LINIMENT I HAVE EVER USED."

"Send me one bottle of Absorbine, as it is the best liniment I have ever used for soft bunches on horses. I used it on a pinto of six years' standing and it removed it," writes Mr. W. S. Ranken, Hillsdale, Iowa, under date of May 20, 1905. It will do the same for you. Absorbine is a pleasant remedy to use—does not blister or remove the hair, and horse can be used during treatment. Price \$2 per bottle from your druggist, or delivered upon receipt of price by W. F. YOUNG, P. D. F., 54 Monmouth St., Springfield, Massachusetts.

Harness racing is growing in popularity in Europe, especially in Austria. Statistics for the trotting season of 1905 in Austria show that it comprised sixty-six days of racing, during which 471 races were given, of a gross value of 1,179,600 kronen, or over \$275,000. Vienna led with four meetings, including 205 races; Baden gave three meetings, with 117 races; Budapest and Presburg gave two meetings each.

Total of nine days' sales, 1,014 head for \$423,450; grand average, \$418.

Record of Old Glory Sales.

1899,	810 horses	\$315,110
1900,	702 horses	352,180
1901,	920 horses	499,355
1903,	944 horses	333,940
1904,	987 horses	447,175
1905,	1,014 horses	423,450

SIXTY PER CENT. HIGHER.

Under late date John Splan writes a gossip letter to the editor of the Western Horseman from Lexington, Ky., in which he says, in part:

"If I remember rightly, a short time ago you and I were about the only 'bulls' on the horse market. Everybody else predicted that the automobiles would put the horses on the gravel train, and the reform governors, by prohibiting betting on the trotting races, would put the owners to carrying the hod. I am glad to state to you that the 'bears' were entirely mistaken. The trotting horse breeding business never looked better to me than now. There never was a time when a good horse would bring any more money I am safe in saying that good horses are sixty per cent higher now than they were ten years ago. Ten years ago I bought Col. Kuser and Bravado, two first-class race horses, for half the money I can buy the same kind of a horse now. I think the European market was never as good for the American trotter as it is at the present time. I am shipping from New York to Europe on the 11th of this month one of the most expensive consignments that I have ever shipped. In the lot is that good horse, Harrison Wilkes, whom I think has amply proven by his public performances that he can be called a first-class type of the American trotting horse. He was bought for Mr. Joseph Setana (Signor Guiseppe Setana), of Bologna, Italy, who expects to race him and afterwards use him for breeding purposes. In the same lot is Harry Simmons, with a record of 2:12½, who goes to Mr. Lamma, the gentleman who has helped to make the American trotting horse famous abroad with Kirkwood, Jr., whom he owns and drives himself, and when you take into consideration that Mr. Lamma is not a light-weight and that he trained and drove and conditioned Kirkwood, Jr., in a manner that made him beat the best horses in Europe, and also the two-mile record for that country, you can imagine that Mr. Lama must be a finished horse-man; and I can also add from my own knowledge that he is a polished gentleman and one of the right sort. I want for export the best trotting mare for racing purposes in this country. Which one is it? I also want the highest class pair of trotting-bred coach mares that can be found. Give me a little of your assistance."

The annual meeting of the League of Amateur Driving Clubs was held at the Hoffman House, New York, on Thursday, November 23rd. The principal business transacted was the election of officers for the ensuing year, which resulted as follows: President, H. K. Devereux, Cleveland, O.; vice-president, J. D. Callery, Pittsburg, Pa.; secretary-treasurer, T. L. Quimby, Boston, Mass. The following directors were elected for the ensuing year: H. K. Devereux, Cleveland, O.; W. C. Brown, Chicago, Ill.; S. T. Harbison, Lexington, Ky.; Horace White, Syracuse, N. Y.; T. L. Quimby, Boston, Mass.

Sober up on Jackson's Napa Soda.

ARIZONA FAIR POSTPONED.

PHOENIX, Nov. 28, 1905.

Breeder and Sportsman: The elements have played our fair management a bad turn. The worst storm that has visited this territory in fourteen years has just been sweeping over this section and it has resulted in so crippling the railroads and weakening their bridges in this neighborhood as to make it uncertain as to when they can be in shape to insure the prompt movement of live stock and other exhibits for the fair; and under these circumstances, our fair commissioners have deemed it best to change the dates of the fair to December 25-30. We have therefore reopened our purses for class races, to close December 16th, and have notified all nominators in our races to that effect.

It seems hard that we, who have never known bad weather here at this season of year, should be compelled to postpone our first fair on account of the weather; but under the circumstances it seems such a course will be for the best interests of all concerned, and as our dates will still have the advantage of not conflicting with meetings at any other points, it will probably be of little, if any, inconvenience to visiting horsemen. The weather has now cleared up nicely, and the storm had no harmful effects locally, except to injure the railroad roadbeds and bridges, and as it is uncertain just when proper repairs can be made, our commissioners did not want to take the chance of having any horses delayed on the road that might be shipped here, and so thought it best to change the dates and reset them far enough in advance to insure settled conditions and prevent any further inconvenience to those wishing to attend or bring horses from a distance.

Kindly make mention in the Breeder and Sportsman of the change of our dates, and that our purses will be open till December 16th. Yours very truly,

W. N. TIFFANY, Superintendent of Speed.

MORNING STAR 2:04¾.

Star Pointer's son, Morning Star, that sold for \$10,500 at the Old Glory sale last week, is described by Murray Howe as follows:

Morning Star is a pacer, and the sort of a pacer that any turf writer, familiar with his short career, could write a book about. In 1904 he made his initial start at Detroit as a green horse and fought it out with the best in the land every week during the entire racing season. In thirteen starts he was six times first and seven times second, taking a record of 2:04¾ in a winning race. During the fall meeting at Memphis he joined Mr. Billings' stable and was booked as a new pole mate for Prince Direct. In their first assault against the watch this pair startled the turf world with a mile in 2:06, which mile is still the world's amateur record. Afterwards the pair took a shy at the world's half-mile record and lowered it to 1:00¾. Both of these performances were to wagon driven by their owner. As everyone expected, Morning Star trained on and has not only won championship laurels in the amateur world the past season, but has shown form that warrants the prediction that he will eventually beat two minutes. In all his numerous trips against time he has finished first, and in his races, including the free-for-all cup events at the Chicago & Pittsburg Inter-City matinees, he easily defeated his fields. He finished the season with a matinee record to wagon of 2:03, and was never given a trial to sulky. One of his last stunts was a quarter in 28 seconds to wagon, driven by Mr. McCrea of Chicago. On another occasion earlier in the season he was driven by a lady who had never pulled a line over him before a mile in 2:07. In point of looks Morning Star is a picture, his manners in and out of harness could not be improved upon, and taking all his qualities in consideration it is doubtful if his equal is in existence.

Mr. Fred Pabst, one of Milwaukee's leading whips, and who is well versed in requirements of show ring winners, has decided to breed trotting bred show horses on a large scale. Twenty years of study of what the market requires, convinces him that the American market still offers opportunities for a profitable investment of this kind, providing stock of the right size, conformation and action, of proper breeding, is secured as a foundation. It is hoped that Mr. Pabst will launch his venture in the neighborhood of the smaller breeders in rearing the kind of horses for which there is a market, on a paying basis. Horsemen generally hail Mr. Pabst's advent with satisfaction, and hope to see him compete successfully in our coming horse shows and state fair exhibits, realizing that the breeding industry will be decidedly benefited by so well posted an acquisition.

REX BOOK.

Rex Book, the Veterinary Guide, is an exhaustive treatise, just off the press. It contains 160 pages and more than 150 illustrations, with attractive cover. It treats, from the experienced Veterinarian's point of view, nearly every subject that could possibly be of interest to the owners of Horses, Cattle, Hogs, Sheep and Poultry.

Any reader of Breeder and Sportsman can secure a copy free by sending to The Rex Company, 800 South 16th Street, Omaha, Nebraska. The book weighs nearly a pound.

Only Lou Dillon and Major Delmar remain now to C. K. G. Billings of all his magnificent string of roadsters. The foals out of his fast record mares are to be developed later, according to general belief, and in a few years more Mr. Billings may be seen on the track driving horses of his own breeding.

NOTES AND NEWS.

Davis sale next Tuesday night.

High class trotters, pacers and thoroughbreds will be sold.

Sir Albert S., 2:03 $\frac{1}{4}$, brought \$1,075 at the Old Glory sale.

The sooner after the first of January California associations announce their intention of giving a harness meeting in 1906 and claim dates the better the circuit will be.

A good Zombro always brings good money. J. E. Reeves, of Cornelius, Ore., has sold to J. W. Cowan, of Killarney, Manitoba, Canada, though his agent, W. W. Smith, of Lafayette, the 3-year-old stallion, The Zoo, by Zombro, dam Boulah, by Altamont. Consideration, \$2,000.

James Thompson, who enjoys the reputation of being one of the best conditioners that ever fitted a harness horse for a race, and who has the happy faculty of bringing his horses home sound and all right after a hard campaign, has opened a training and sale stable at Pleasanton track and invites correspondence from owners and breeders. Mr. Thompson is in close touch with a number of eastern gentlemen who are always ready to pay a fair price for a horse that just suits them. Mr. Thompson has just returned from a tour of the Grand Circuit with Mr. J. C. Kirkpatrick's good gelding John Caldwell, and while he did not win a very big pile, owing to the fact that he was continually meeting fields that were trotting around 2:05, he "made expenses" and brought the gelding back in such fine shape that he was able to win both his races in straight heats on the Southern California circuit last month and broke the California trotting race record when he won two heats of his Los Angeles race in 2:08 $\frac{1}{2}$.

H. S. Hogoboom is working six head of trotters and pacers at the Woodland Stock Farm race track and all are doing well. Among them is the fast but hitherto unruly pacing mare Mildred O., which seems to have mended her ways considerably under Mr. Hogoboom's care. The track is in fine shape, and a prosperous season is expected by the Yolo county farmers and stock men. Mr. Hogoboom has the stallion Iran Alto, 2:12 $\frac{1}{4}$, in fine order for the coming season.

Mr. C. L. Griffith, of Pleasanton, recently secured a long lease of about 250 acres of rolling hill land just east of that town and is building a residence thereon and will reside there with his family. There are about 250 acres of farming land, which will be sown to grain and grasses and used for hay and pasturage for Mr. Griffith's mares and the mares sent to be bred to Bonnie Direct, 2:05 $\frac{1}{4}$, and Bonnie Steinway. The place is an ideal one, the residence occupying a beautiful site on the crest of a hill overlooking the entire valley, where it is sheltered by immense pine and eucalyptus trees, which however, do not shut out any of the beautiful views. Mr. Griffith is having the barns and paddocks put in first-class condition and there will be no finer horse farm in the country when all the improvements are made. Bonnie Direct and Bonnie Steinway and the colts by the first-named that will be worked for speed will be kept at the Pleasanton race track heretofore.

Every person who attended the recent meeting given by the Los Angeles Harness Horse Association expresses the opinion that the racing was the best they ever saw on any track.

A movement is on foot among a number of gentlemen with capital to erect in this city a building where horse sales can be conducted in an up-to-date manner. San Francisco has been sadly in need of such a building, and nothing will aid the horse market here more than the erection of one that will not only furnish good accommodations for fine horses, but also a sales ring and auditorium where people who attend can be comfortably seated during day or evening sales and in all sorts of weather. We hope the project will be carried out and are certain that such a building will pay a good profit on the investment.

Don't make any mistake. Get some of those well bred Rey Directs that Geo. A. Davis will sell at Fred H. Chase's salesyard next Tuesday evening. There are some very choice ones among them.

The green mare Czarina Dawson, whose sale for \$10,000 was the real feature of the recent New York auction, cost the man who sold her, Oliver H. Bain of Philadelphia, \$3,000 two years ago. She is seven years old and by Czar (3) 2:12 $\frac{1}{4}$, son of Russia 2:29 $\frac{1}{4}$, by Nutwood 2:18 $\frac{1}{4}$, her dam being Ionne, by Walkill Prince. The demand for her was due to the fact that she trotted a very easy second to Mainsheet in 2:08 $\frac{1}{2}$ at Lexington last month.

A. N. Brady, of New York, who paid \$105.00 for Morning Star, 2:04 $\frac{1}{4}$, will present him to one of his sons as a Christmas gift while his other son will find the fast trotter, George G., 2:06 $\frac{1}{4}$, in his stocking on Christmas morning. Morning Star was shipped to Cleveland and will remain in "Doc" Tanner's stable until it is decided as to who will train the fast pacer next season. George G. is also at the Glenville trainer's stable.

The Phoenix, Arizona, meeting had to be postponed until December 25-30, on account of the big rain last week. This is the first time in fourteen years that a storm has visited Phoenix the first week in December.

A pair of Shetland ponies with a double harness and two seated surry are to be sold at the Davis sale next Tuesday evening. The ponies are well matched, five years old, and the surry and harness were made to order. Here is a chance to make a Christmas present.

Barney Simpson is training a very promising two-year-old trotter by Clay S. 2:13 $\frac{1}{4}$ out of a mare by Major, second dam Orphan Girl by Buccaneer. Major is a son of the Nutwood stallion Cornelius, and out of mare by Anteeo.

Will Fleming, owner of Bill Bailey, Go Direct and other pacers, is wintering at Portage la Prairie, and will have some part in the winter racing there. He has enlarged his string since he left Montana, and Bailey is among the first-class ones of the East.

There is a report that L. E. Hanchette, who recently effected the purchase of the San Jose, Santa Clara and Alum Rock electric railway for a company of capitalists, has also just completed negotiations for Agricultural Park, San Jose. Whether the race track will be kept up is not yet known.

Mr. T. W. Barstow, the well-known horseman of San Jose, leaves today for a trip to Canon City, Colo., from where he has been receiving many flattering offers to locate. He will look over the situation there and if it meets with his approbation will probably remove his entire stud of stallions, brood mares and horses in training to that point. He owns the stallion Nearest, 2:22, a full brother to the great trotter John A. McKerron, 2:04 $\frac{1}{2}$, and sire of Alone, 2:09 $\frac{1}{4}$, and other very fast ones. He also owns a two-year-old McKluney stallion that is one of the best bred McKinnays living, as well as one of the most promising. His dam is by Nearest, brother to John A. McKerron, 2:04 $\frac{1}{2}$, second dam Fanny Menlo, dam of Claudius, 2:12 $\frac{1}{2}$, third dam by Anteeo, 2:16 $\frac{1}{4}$, fourth dam (the dam of California Nutwood), by George M. Patchen. Mr. Barstow will take about twenty head of horses with him if he decides to locate at Canon City, where there is an excellent half mile track and fair grounds, located in the midst of a thriving farming community. Nearest will be greatly missed by the breeders of Santa Clara county, where he has received a large patronage. His colts are all fine individuals, large and fast. The three-year-old pacer Highfly, by Nearest, owned by Mr. Barstow, stepped a half in 1:00 $\frac{1}{2}$ at San Jose last summer, the last eighth in 14 seconds. This colt is one of the coming sensations. He carries several crosses of the blood of Williamson's Belmont in his veins, getting one through his sire Nearest, another through Bismark, sire of his dam, and a third through his great grandam, who was by this thoroughbred ancestor of so many fast ones, including Lou Dillon, 1:58 $\frac{1}{2}$; John A. McKerron, 2:04 $\frac{1}{2}$; Sweet Marie, 2:04 $\frac{1}{2}$, and many others. Mr. Barstow promises to give us his impressions of the country around Canon City on his return. If he decides to locate there the accession of his stud of grandly bred horses will be Colorado's gain and California's loss.

The only world's record that went down the past season was that of Dan Patch, who reduced his own record a second.

The Sacramento Fire Department has a pair of horses in service that are 21 years old. They have been in active use in the department for twelve years, and respond to a fire alarm now as well as younger horses, and seem to have as much speed as ever. They are a handsome pair of blacks and have evidently had good care.

M. T. Grattan, the Preston, Minn., breeder, has just sold another colt through his established practice or selling to the highest bidder, the bids to be mailed or filed in writing and are then opened, on a certain date, which is previously set, when they close. By this method G. E. Powell, of Parsons, Kan., has secured the weaning colt Superb McGregor, an own brother to Alice McGregor (4) 2:22 $\frac{1}{2}$, for \$233.

North Star 2:13 $\frac{1}{4}$ by Nutwood Wilkes won all the big three-year-old trotting stakes in California this year and closed the season with over \$5000 to his credit. If you want your foal of this year to duplicate North Star's performance you will have to start right by entering in all the stakes of 1908. The Occident Stake, which is the richest of them all, closes January 1st.

William Darling, one of Chicago's veteran drivers of trotters, died recently in a sanitarium. His mental condition had been failing for some five or six years. He was a contemporary and competitor at the old Dexter Park track of such men as Sam Crooks, Simon Anderson and Geo. Logan. Among his pupils was the late George West, who was one of the most successful reinsmen the great West ever turned out to invade the precincts of the Grand Circuit.

The fastest trotting team in Canada, Mary Scott, 2:14, and Jennie Scott, 2:14 $\frac{1}{2}$, were recently purchased by Mr. John Crabtree, of Boston, Mass., for \$5,000. They are own sisters, sired by Bryson, 2:15, son of Simmons, and were owned, developed and successfully campaigned several seasons by Mr. A. Collins, a prominent knight of the sulky of Hamilton. The great span of mares were named in honor of the daughters of Mr. Hugh Scott, of Toronto, who formerly owned Bryson, 2:15.

Many tracks in California are condemned for winter training just because they are not properly drained. Even an adobe track can be used a day or two after a rain storm if it is built so that the water does not stand on it. A good deep ditch at the inside rail to carry off the water, and the track slanted to this ditch all the way around, with a culvert under the track at the lowest point to carry off the water, will make a winter training track of many that are considered useless for this purpose.

Lady May, the brood mare by Port Leonard, owned by Col. Exall of Texas, is now the dam of seven standard performers, all by his stallion Electrite. The fastest is the trotter Blondie 2:13 $\frac{1}{4}$, one of the most noted horses on the New York speedway.

If there is anyone that doubts the permanent value of trotting stock let him look over the summary of the Old Glory sale at New York that closed last week. Over a thousand horses were sold and they averaged nearly \$600 each.

If the managers of California tracks will meet and make an early announcement of a California circuit, with fair purses for trotters and pacers, harness racing will have a big boost on this coast. A good circuit will secure entries from all the best trainers on the coast, and keep several at home who have heretofore raced on the Grand Circuit. With Chas. DeRyder, Millard Sanders, James Thompson, Monroe Salisbury, and several others racing on the California circuit, the sport would have a greatly increased interest.

Rey del Valle, the two-year-old that Geo. Davis sold last year for \$2500, has since paced a trial in 2:06 $\frac{1}{4}$ and is expected to go down the Grand Circuit next year in his four-year-old form. A two-year-old full sister will be offered at the Davis sale next Tuesday evening.

An advertiser has a very fine young roadster for sale at a very reasonable price. Particulars at this office.

A three-year-old filly by Rey Direct 2:10 out of Stemwinder, the dam of Directum 2:05 $\frac{1}{4}$, will be offered at the Davis sale next Tuesday evening at Fred H. Chase & Co.'s salesyard. This filly is related to the royal families all right and is as good as her breeding.

Our Los Angeles correspondent "Hidalgo" was in error when he stated in his letter last week that James Thompson was behind Albata in the 2:12 class pace. Ben Walker drove Albata in that race. The fact is that while Mr. Thompson has given Albata all his training and took him through the Grand Circuit this year, he has never driven him in a race.

Will Hitchings has leased the Old Saugus track for two more years. This indicates that the harness racing game will be a feature in old Massachusetts next season.

Don't fail to enter your foal of this year in the Occident Stake of 1908. Full particulars in our advertising columns.

Laconda, by Allerton 2:09 $\frac{1}{4}$, came out as a four-year-old, scoring a record of 2:13 $\frac{1}{4}$. This he reduced to 2:07 $\frac{1}{4}$ at five, to 2:05 $\frac{1}{4}$ at six, to 2:03 $\frac{1}{4}$ at second and to 2:02 this year at eight. Such consistent yearly improvement—always in races—is almost unequaled.

General Nelson A. Miles was elected a life member and honorary president of the Riders and Drivers' Association at the Metropolitan Hotel, Washington, D. C., recently. The District Commissioners and Colonel Bromwell, U. S. A., also were honorary members. P. V. DeGraw, Fourth Assistant Postmaster General, presided.

If Tom Axworthy 2:07 goes sound next season, Geers will race him.

Axtell 2:12 is now credited with ninety-three trotters and twelve pacers in the standard list.

Bollivar 2:06 $\frac{1}{2}$, purchased last spring in Humboldt county by Monroe Salisbury for James Butler of New York, is the leading money winning pacer of the year, with \$9820 to his credit.

F. R. Janvier of New York last week purchased from George Starr the well known sire The Director General, 3:17 $\frac{1}{2}$, by Director 2:17, dam Winifrede by William L., 4:24; second dam Princess Eloise by Mambrino King 1279. He is the sire of the sensational stallion Mainsheet 2:08 $\frac{1}{2}$, winner at Cincinnati and Lexington and considered a sure 2:05 trotter. The price is private but is reported to be in the neighborhood of \$12,500.

The report that Charles Marvin would train next season for Henry Exall, the Texas horseman, is denied.

The \$10,500 paid for Morning Star 2:04 $\frac{1}{4}$ at the Old Glory sale is the highest price ever paid at auction for a pacing gelding.

John Splan has purchased the great little two-year-old trotting Silko 2:17 $\frac{1}{2}$, by Moko-Silko 2:12 $\frac{1}{2}$, of Charles Marvin and Brook Curry, Lexington, Ky., for a long price. He will ultimately be sent abroad, but will be raced in this country in 1906, in the three-year-old Futurities, first.

Mary Lou 2:17, the dam of Budd Doble's great stallion Kinney Lou 2:07 $\frac{1}{4}$ is now owned by Mr. B. L. Tuft of Salem, New Jersey. She will be twenty-one years old in the spring and is now heavy in foal to Silent Brook 2:16 $\frac{1}{2}$.

THOROUGHBRED DEPARTMENT.

By RALPH H. TOZER.

The long-continued run of bad luck experienced by Jake Holtman in the starting business at Emeryville is the talk of the track and the cause of much teeth-grashing among the owners and trainers. There have been threats galore, to take big strings away to some other ship where Holtman is not at the helm and there was even talk of visiting wrath upon his young head, but it was thought better of—when they thought of Jake's size and strength. The truth of the whole matter is that the system of starting in vogue at Emeryville is bad and not the starter that is so much at fault. Do away with the bull whips and the "hold-on" boys—"the assistant bookmakers," as a wag terms the holders of heavily-played horses—and try the walk-up-slowly-in-a-line plan so successfully used by Mars Cassidy. The result will be quicker starts, better send-offs, no leaving of horses at the post that have been played for thousands of dollars, no holding on, whippings or vexatious delays, no jam-'em-up-close starts where there are collisions a-plenty before the field has been on its way a sixteenth of a mile. The much-dreaded "schooling list" will look as meager as a bone gnawed upon by a hungry dog for three days, and peace will be restored between the starter and the admission-paying public and horsemen. It has to my mind been amply demonstrated during the past month that the present plan of starting race horses is as full of flaws as a sieve is of holes. As said before, Holtman is as good a barrier-wielder as there is in the business, and all that is needed is to put aside the plan that has been tried, found wanting and extremely costly and in its stead use one that has been wonderfully successful and proved pleasing to all who give "the sport of kings" their moral and financial support.

The return to the turf in the near future of Thomas H. Williams Jr., president of the New California Jockey Club, will be hailed with pleasure by his host of friends, for Mr. W. never does things by halves, and will doubtless gather together a lot of tried racers with winning ways, as he did twelve or thirteen years ago. At that time he had probably the most select stable in America, containing, as it did, Raeline, the record-breaker, the first horse (he was a three-year-old) to run a mile in 1:39½ over a circular track in a race; Rinfax, conqueror of Geraldine in a match race at Bay District and a stake-winner in the Far West, Middle West and East; Homer, about the best handicap horse of his day; Flirtation, the champion American two-year-old filly of her year, and the fleet little mare Tigress, besides a few others that earned fame and coin. George Covington trained the horses and George Miller, of Morello memory, did the piloting. It is the intention of Mr. Williams to race in the Middle West if there is any good racing around Chicago, next year; if not, to go to the far East. Unlike most track owners who also possess race horses, the N. C. J. C. president does not believe in racing horses over his own track, consequently sold out when he became the head of turf affairs here, and this reflected great credit upon him and did away with all talk of desiring "a shade." The purchase of the horses that will make up the string will be watched with great interest in this part of the world. As Mr. W. does not believe in two-year-old racing, it would not be surprising if his stable were made up of three-year-olds and older horses.

Richard Croker, formerly the Tammany "boss" of New York, heads the list of winning owners in Ireland by a large margin this season, up to November 11th, his horses having won thirty races and about \$26,500 in our coin. Vain Glory, an unbeaten two-year-old by Wildfowler, is his principal money-winner and stands second on the Irish list in respect to money won. Mr. Croker is much more popular in Ireland than in England. It seems that the English could not "stand for" his political record in New York, and even if he were a multi-millionaire and a staunch pillar of the turf, the best people of the "tight little isle" did not "eotton" to him, and he moved to a more congenial clime. Ed Corrigan, I am informed from a good source, stood very high in turf circles during his stay "across the pond," and although he had a decidedly blunt way of expressing himself, it was readily realized that "old man Ed" was "a diamond in the rough."

The winner of the Dundrum Plate at the recent Leopardstown (Ireland) meeting turned up in Yankee Bill, a colt with the most cosmopolitan breeding I ever came across, he being by Bill of Portland, an English horse that made a great success at the stud in Australia and was then brought back to his native land; the dam of Yankee Bill is Chance Shot, by our American racing champion, Hindoo; second dam, Richoehet, a Musket mare bred in New Zealand and brought to America by Capt. Thomas B. Merry, for the late L. J. Rose, if memory serves. If Yankee Bill had a touch of French or Austrian blood in his veins all the great thoroughbred-breeding countries would be represented.

Wildfowler, son of Gallanule and Tragedy, and head of the winning stallions' list in Ireland this season, is but nine years old. He was a St. Leger winner. Bushey Park, by Hampton-Sunshine, is second, and the former leader, Hackler, by Petrarch, is third, closely pressed by the dead Isosees, by Isonomy-Belphebe. Lesterlin by Gallanule-Millora, fifth on the list, is now the property of Richard Croker. His great horse Dobbins, now dead, is nineteenth. Hackler's Pride, the double winner of the Cambridgeshire

(1904 and 1905) has been purchased for a large sum from Capt. Forester by Sir Tatton Sykes, and is now quartered at the latter's stud farm near Sledmere, England. The London Sportsman has a great mating competition on, with Hackler's Pride as the mare for which the most fitting mate is to be found. Flying Fox is barred, and the contest is open to March 1, 1906. A very representative committee has been appointed, taking in all the great breeding countries of the world.

Flying Fox again heads the list of winning stallions in France. In three seasons the progeny of this wonderful young horse have won \$520,000 in our money. Winkfield Pride is a good second this season. Finasseur, his splendid three-year-old son, being his mainstay. Childwick's big winner is Clyde.

The great Rancho del Paso dispersal sale began at the Fasig-Tipton Co.'s place last Monday in New York under favorable auspices. Ninety-nine head of brood mares were disposed of the first day for \$53,675, or an average of \$530. It is now thought the total for the sale will run very close to the million-dollar mark.

The top price, \$6000, was paid for a California-bred Midlothian mare, Arnette, dam of Reliable and Edna Jackson, Whitney & Oxnard, joined A. J. Joyner in boosting the figures, until the mare was knocked down to Joyner, who was probably acting for the new Thomas-Paget turf alliance. Joyner also secured Afric Queen, dam of Africander, for \$5100. Whitney and Oxnard again taking part in the bidding. Bellane, dam of St. Bellane, one of the best long-distance performers during the recent season, went to Joyner, also for \$3800. John Mackey, manager of the Haggin breeding industry, paid \$5000 for Colonial. Oxnard purchased thirty-four mares in all, paying \$2000 each for Duchess of Towers and Andrisa. Another liberal buyer, C. Smith, got Anglia. Joyner made other purchases before the sale was over, getting Braw Lass, dam of Niblick, for \$2500, and Brillar, dam of Sir Brillar, for \$1600.

The coming sale of Antrim Farm yearlings in this city contains twelve youngsters, the get of imp. Kismet, Herald, Cromwell and All Green, and most of them out of good producing mares. Cromwell is already a sire of winners and about the most fashionably-bred son of St. Blaise in the country, his dam Florina being an own sister to Fides, the speed marvel. Kismet and Herald have been successful as sires and are well known. Of All Green (son of Knight of Ellerslie and Lizzie Pickwick, by imp. Mr. Pickwick) I predict wonderful things as a sire, if there is anything in blood lines. Through Knight of Ellerslie and Eolus clear to Eclipse there is nothing but success, while the first six dams of All Green produced horses of stake caliber and were by great brood mare sires.

The second day of the Rancho del Paso dispersal sale in New York saw another large crowd of breeders and turfmen in attendance. Ninety-eight brood mares realized a total of \$72,675. With \$53,675 paid for ninety-nine mares on Monday, the grand total so far foots up \$126,350, with an average of \$641. The star of the second day's sale was Florahurst, dam of Hurstbourne, winner of \$38,710, Sandhurst and Minerva II. She was knocked down to John Mackey for \$8500. Mackey, who is manager of the Haggin studs, made many other purchases, presumably for his employer. Margerique, dam of Nasturtium, for whom the late W. C. Whitney paid \$50,000, brought \$6500. She will be sent to the Whitney stud. Linda Vista, dam of Cairngorm, winner of \$47,750 this season, was sold to A. J. Joyner for \$6000. Linda Vista, who was bred by the late Col. H. I. Thornton, will probably be bred to Hermis, who will be the leading stallion at the new establishment. A number of young mares, not bred yet, were sold to E. R. Trooper, who represented the English remount troop, it was said, and was making selections for use in the British cavalry.

When the third day's sale of the Rancho del Paso mares ended a total of 102 had changed hands for the day, and the amount realized was \$64,050, an average of \$628. For the three days the number sold was 299, and the gross amount footed up to \$190,440, an average of \$638. The highest figure reached today was \$4100 for Sister Jeanie, a six year old Midlothian mare, bred to Watercress. She was finally sold to John Mackey, who is James B. Haggin's stable superintendent. A peculiar thing is that Sister Jeanie's dam, Fannie Louise, brought but \$450 here last Monday night.

At the salesyard of Fred Chase & Co last Monday night the horses belonging to the estate of the late Michael Fox were disposed of at auction, as follows: ReCarlo, ch. c., 2, by St. Carlo-Reseda II, P. Ryan, \$2300; Masco, ch. g., 4, by Maxio-Reseda II, \$1200, F. Israel; Fannie Louise and Reseda II, two superior brood mares, brought the ridiculous sum of \$450 each, Molera & Joseph being the lucky purchasers. Antinous, Edna Rose and the weanlings by Orsini and St. Carlo brought smaller sums.

Jockey Arthur Redfern's injury turns out to be more serious than at first supposed. He cannot lift his hand above his head, and his injured member resists the treatment of high-priced specialists.

The Havana (Cuba) Jockey Club was formally organized last Wednesday, and plans for the building of a \$250,000 race track are being discussed. The course will be within three miles of the city on a handsome and popular highway. They hope to make it an ideal winter racing point and to attract Americans.

Watercress has been purchased by Harry Stover of Steve Judge for \$800.

There has been a lot of "boosting" and claiming in selling races of late. Tuesday Possart was claimed by Tom Davies after the latter's Christine A. had been run up several hundreds. Wednesday The Roustabout was run up from \$400 to \$800 by Dan Meek, owner of Titus, which ran second, and Owner Keene retaliated by claiming Titus. Firm Foot, owned by old Dave Bridges, was run up from \$600 to \$1100 by J. E. Case, who formerly owned Possart.

BURNS & WATERHOUSE SALE.

The most successful sale of thoroughbred yearlings held in California in many a day came off at Fred H. Chase & Co.'s salesyard in this city Thursday evening of this week when the colts and fillies from the Hopland farm of Burns & Waterhouse were offered. The principal buyer was President Thos. H. Williams of the New California Jockey Club, who is gathering a string of horses to race on the eastern tracks next summer. He paid the top price of the sale, \$3000, for a chestnut colt by Altamax, out of Picnie. The prices realized follow:

Rosal, brown colt by Eddie Jones-Rosewar, Thomas H. Williams, \$350.
Pocahonto, bay colt by imp. Galveston-Jaunita, A. Josephs, \$250.
Amia, bay filly by Altamax-Amida, A. Josephs, \$250.
Shastamax, chestnut colt by Altamax-Shasta Water, Barney Schreiber, \$350.
Hipoteca, chestnut filly by Altamax-Mortgage, A. Josephs, \$850.
Palomico, bay colt by imp. Galveston-Paloma, Billy Magrane, \$225.
Huerfano, brown colt by Eddie Jones-Free Love, Thomas H. Williams, \$500.
Califa, chestnut filly by First Tenor-Callista, S. Crane, \$150.
Hilo-de-Oro, bay colt by Altamax-Ray of Gold, Thomas H. Williams, \$1500.
Peligrosa, bay colt by Altamax-Dangerous Maid, Billy Magrane, \$400.
Inbree, chestnut colt by Colonel Wheeler-Happy Maiden, T. Zimmer, \$350.
Banasta, chestnut filly by Altamax-Miss Ban, B. Dennison, \$250.
La Ultimo, bay filly by First Tenor-Early Star, Charles Brown, \$150.
Costados, chestnut filly by Colonel Wheeler-Cosette, Adam Andrew, \$400.
Prejudicio, brown colt by imp. Galveston-Prejudice, Thomas H. Williams, \$1500.
Altanero, chestnut colt by Altamax-Picnie, Thomas H. Williams, \$3000.
Dulzura, bay filly by Altamax-Dulcie Larondie, E. Fitzgerald, \$125.
Kruko, chestnut colt by Altamax-Kruna, B. Dennison, \$150.
Roalta, chestnut colt by Altamax-Miss Rowena, Thomas H. Williams, \$2000.
Alta Spa, bay colt by Altamax-Spainwar, C. Earl, \$375.
Edna Felice, brown filly by Eddie Jones-Felice, A. Josephs, \$225.
Talentosa, bay colt by imp. Galveston-Talluda, Thomas H. Williams, \$1000.
Tony Boy, chestnut colt by Altamax-Bit of Fashion, A. Josephs, \$225.
Macita, chestnut filly by Colonel Wheeler-Palomacita, Charles Brown, \$1500.

END OF RANCHO DEL PASO SALE.

New York, December 7.—Watercress, brown stallion, 16 years old, by Springfield-Wharfale, bred by Lord Falmouth in England, was sold at auction today for \$71,000 to J. B. Haggin, who already owned a half interest in the horse through the Haggin-Tewis partnership in the famous Rancho del Paso stud. Today marked the end of the four days' dispersal sale of all the thoroughbreds of this stud. Over 400 head were sold, bringing a grand total of \$405,275.

The price paid for Watercress was the third largest ever paid for a horse by an American owner. The stallion Ormonde, sire of Ormondale, winner of this year's Futurity, was bought by Mr. Macdonough for \$150,000.

St. Blaise brought the highest price ever paid at a sale in this country, being bid in for \$100,000 at the dispersal sale of the stable of the late August Belmont.

Watercress is the sire of Watercolor, Waterboy, Nasturtium and many other horses prominent on the American turf. He will be sent to Mr. Haggin's Elmdorf stud in Kentucky.

Star Ruby, sire of Africander, Sombbrero, Animosity, Shooting Star and other well known performers, was bid in by Mr. Haggin today for \$30,000. Mr. Haggin also secured Goldfinch and St. Gaiten at \$16,000 each. Golden Garter, sire of Mechanus, was sold to A. J. Joyner for \$10,000. As a four-year-old he carried top weight and won twelve stake races in England. H. T. Oxnard got Glenheim for \$3100. For imported Toddlington the bidding was lively. Joyner finally getting him for \$8000. Toddlington is out of Minerva, daughter of Nydia, who was the dam of Optime, the dam of Sysonby.

Twenty-two untraced fillies were sold, bringing a total of \$29,375, or an average of \$1335 per head. Thirteen yearlings were sold at good prices, the lot bringing \$11,800. Star Ruby and Watercress colts bringing the highest bids. Among these was a chestnut filly by Star Ruby out of Irony, which went to R. Bowen for \$5500.

Jackson's Napa Soda cleanses the stomach and renders the eye clear.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

COMING EVENTS.

Rod.

April 1-Sept. 10. Or. 16-Feb. 1—Open season for taking steelhead in tidalwater.
June 1-Jan. 1—pen season for black bass.
Sept. 10-Oct. 16—Close season in tidalwater for steelhead.
Sept. 10-Oct. 16—Close season for catching salmon.
Sept. 15-April 1—Open season for lobsters and crawfish.
Oct. 16-Nov. 15—Close season for taking salmon above tide water.
Nov. 1-April 1—Trout season closed.
Nov. 1-April 1—Closed season for taking steelhead above the water.
Nov. 1-Sept. 1—Open season for crabs.
Nov. 1-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.
Sept. 1-Feb. 15—Open season for mountain quail, grouse and age hen.
Oct. 15-Feb. 15—Open season for quail, ducks, etc.
Oct. 15-April 1—Open season for English snipe.
Oct. 15-Aug 1—Deer season closed.

Bench Shows.

Nov. 30-Dec. 2—Philadelphia Dog Show Association. Philadelphia. J. Sergeant Price Jr., Secretary.
Dec. 7, 8—Toy Spaniel Club of America. New York. N. Goldberg, Secretary.
Dec. 11, 16—People's Pet Stock Show. Fort Wayne, Ind.
Dec. 13, 14—Southwestern Kennel Club's bench show at Pasadena. Entries close—
Dec. 18, 21—Colorado Springs Kennel Club.

1906.

Jan. 4, 6—Southern Ohio Kennel Club. Hamilton, O.
Jan. 17, 20—Cincinnati Kennel Association. Cincinnati, O. John C. Schomaker, Secretary.
Feb. 12, 15—Westminster Kennel Club. New York. Robt. V. McKim, Secretary.
Feb. 20, 23—New England Kennel Club. Boston. Wm. B. Emery, Secretary.
Feb. 28-March 3—Washington Kennel Club. Washington, Pa. F. C. Thomas, Secretary.
March 7, 10—Duquesne Kennel Club. Pittsburg, Pa. F. S. Steadman, Secretary.
March 14, 17—Passaic County Fish and Game Protective Association. Paterson, N. J. N. J. Mathews, Secretary.
March 21, 24—Wolverine Kennel Club. Detroit, Mich. K. G. Smith, Secretary.
May 29, 30—Long Island Kennel Club. Jos. M. Dale, Secretary.
June 1—Ladies Kennel Association of Mass. Mrs. L. M. Speed, Secretary.
June 9—Wissahickon Kennel Club. Wissahickon, Pa. J. Sergeant Price, Secretary.
Sept. 3, 6—Taunton Kennel Club. Taunton, Mass. A. J. Lee, Secretary.

Field Trials.

Nov. 21—International Field Trial Club. Ruthven, Ont. W. B. Wells, Honorary Secretary, Chatham, Ont.
Nov. 28—Virginia Field Trial Association. Martinsville, Va. Chas. B. Cooke, Secretary, Richmond, Va.
Dec. 2—Continental Field Trial Club, 11th annual trials. Waynesboro, Ga. John White, Secretary, Hempstead, Long Island.
Dec. 7—Pointer Club of America (following the Continental trials). Barber, N. C. C. F. Lewis, Secretary, 126 Maiden Lane, New York.
Dec. 12—Eastern Field Trial Club. Waynesboro, Ga. S. C. Bradley, Secretary, Fairfield, Conn.
Dec. 18—Alabama Field Trial Club. Huntsville, Ala.

1906.

Jan. 9—Georgia Field Trial Association. Waynesboro, Ga. P. M. Essig, Secretary, Atlanta, Ga.
Jan. 8—Pacific Coast Field Trials Club, 23d annual trials. Bakersfield, Cal. Albert Betz, Secretary, 201 Parrott Bldg., San Francisco.
Jan. 8—Texas Field Trial Club. 4th annual trials. Kansas City, Tex.
Jan. 15—United States Field Trial Club. Grand Junction, Tenn. W. B. Stafford, Secretary.
Jan. —National Championship Field Trial Association. Grand Junction, Tenn. W. B. Stafford, Secretary.

STATE SPORTSMEN'S ASSOCIATION CONVENTION.

The California Fish and Game Protective Association convened in sixth annual session at Marysville on the 24th and 25th inst. The visit of the attending delegates was made an entertaining and hospitable function by the Marysville sportsmen, who are noted for their good fellowship.

The meeting opened at the City Hall on Friday evening with a fair attendance of delegates and citizens. Col. E. A. Forbes presided as chairman.

Mayor Eckhart, the first speaker, welcomed the visitors and extended the hospitality of the city to the delegates. Col. Forbes in a brief address on the subject of fish and game protection introduced President H. T. Payne, who outlined the purposes and objects of the association in its work as follows:

It is my pleasant duty to return to you the sincere thanks of our association for the warm welcome that you have extended to us. We wish also to thank the citizens of Marysville and especially its newspapers, for their very generous reception.

It is true there are not many of the members of the association here, but that is principally because this is not a legislative year and consequently our labors are not as great as at the meeting in the year preceding the legislative session.

Our association meets here now in its sixth annual convention. We come, I can assure you, with no selfish purpose; we come asking for nothing for ourselves that we do not desire as freely granted to every other citizen. As an evidence of that I call your attention

to the fact that it was this association that first appeared before the legislature and asked that a limit be placed upon the number of birds or animals that we might kill in one day. Not only that, but at the last session we went before the legislature and asked for a still greater reduction in that number, because we saw that game was growing scarce while the number of guns was multiplying and hunting becoming more popular with the young men. So we asked for that further reduction, which I am sorry to say we did not succeed in obtaining. In addition to that, not wishing to see those who never hunted taxed for the preservation of the game, we went before the legislature and asked that the sportsmen, those who did hunt, should have a license imposed on them by the State in order to raise the money necessary for the protection of the game.

Now, when we do that, we certainly cannot be accused of being selfishly engaged in this work and wanting to keep the game for ourselves. We do not. We believe the game is an important factor in the prosperity of the State; that it is one of its important resources. We know that the game of California and those varieties of fresh water fish which are protected by law at certain seasons furnish the people of the State with more than 23,000,000 pounds of wholesome food every year. That being the case there can be no question that it is a valuable asset in our resources; for every pound of fish or game placed upon our tables allows the export of just that much more of other products and brings back to us the value of those other products. So the game and fish are worth that much in money value to the State. More than that, we know from observation and investigation that the game of California attracts to the Coast Eastern tourists and sportsmen who expend in our midst more than a million and a quarter annually. We also know that the sportsmen of the State, those who hunt and fish for pleasure, expend in the pursuit more than seven and a half millions every year. Who gets the money? Your railroads, your hotels, your stage lines, your livery stables? Not they, for they spend it. It also goes to your gun shops and from those it circulates in every avenue of trade. It goes into the hands of those who work for a livelihood.

The object of this association is to try to secure such legislation as will maintain the supply. We are trying to have such laws passed and trying to see that they are enforced. And we believe that the best way to secure their observance and to cure a man of violating them is not by arresting and punishing him, and thereby possibly making his family suffer for his wrongful deed, but, if we can, by going to him and talking to him and showing him wherein he is doing wrong not only to himself but to his fellow citizens, converting his heart and making him a game protectionist. For when we have once succeeded he is a game protectionist forever after and will not violate the law. Therefore we believe that educating the people as to the value of the game and the necessity for its protection is the very best way to secure the enforcement of the laws. For that reason we are endeavoring to plant local associations in all parts of the State. We have them in a great many counties now. In some, of course, they are not as active as in others, but in some they are so active that a violation of the law in that county is a rare thing, which has been brought about by the moral influence of the members.

You in Marysville can do the same. As your Mayor has stated, and which I know personally to be a fact, you have in your county and the county adjacent some of the finest hunting grounds in the State. If I should tell you the number of pounds of game the people of this city consume every year it would astonish you; and, as I said before, by consuming that you have that much more of other products to export; therefore, it is of value to you. The hunting affords pleasure to the hunters, but they pay well for that pleasure, and the money they spend in its pursuit circulates through all the avenues of business. If you will think the matter over you will soon realize that the game is one of the resources of your county; that it brings people here from abroad. They probably come first just to have a little hunt; they come again, and the first thing you know you have made a permanent citizen of the one who visited you a few times on account of your game. Some of the most prominent citizens now in the State originally came to California simply for the purpose of having a little shooting in the winter. They came once or twice and the next time they brought their families and their possessions and became permanent residents.

Many of them are men of wealth. I can call your attention to one in particular, whom you probably know well. That is Mr. Simpson of the city of Los Angeles, who first came just for a little shooting and to spend the winter. He liked the country the first year and came back a second. The third year he was a citizen of Los Angeles and to-day owns two or three of the finest blocks in that city, where he is a man of prominence. A brother of his went to Seattle for the same reason and has now become one of the leading citizens there. And so it is all over the Coast. Therefore, it behooves you, if you have good hunting grounds in your county, to try and preserve the game, because it will put money in your pockets. Probably for every duck killed in this county by men who hunt for pleasure \$2 is spent, which goes into the pockets of your business and working men. It is said that

President Roosevelt, when passing one day through a market in New York, noticing a deer hanging there, remarked: "It is possible that carcass is worth \$20 in this market, but if that deer was running wild in the Adirondacks it would be worth to the whole people of the State of New York not less than \$500." And so it is with every deer killed in the State of California. I venture to say that for each one not less than \$250 is expended. Then are they not valuable to you, if the means of putting that much money in circulation?

With the good hunting grounds you have around you here, with opportunities you have to maintain them, if you of Marysville will take hold of it as you should you will go to work right now, not wait but now organize yourselves as a Game and Fish Protective Association, have deputy wardens appointed all over the county, men you can trust, men who will perform their duties, and whenever you know of a violation of the law see that the violation is prosecuted and the violator properly punished. That is the way to protect your game, and the only way. Since I have been here I have been told that a few days ago two Japanese were arrested for a violation of the salmon law; that they were tried, and your juries turned them loose, though the evidence was absolutely positive that they were guilty. Is that right? It is simply offering a bribe to some one else to do the same thing. You should so teach your citizens that every one of them when placed on a jury to try a case of violation of the game law will be as ready to punish the violator as he would be if the man had been arrested for breaking into a house, for in one sense of the word he has committed larceny just the same, for he has stolen that which belonged to the people and which he had no right to take. Why then should not he be punished for it? But if you let him go some one else will do the same thing; will say "This man was arrested for violation of the salmon law, but they could not get a jury to convict him, and they cannot convict me, so I will go and do as I please."

You should get together and determine that the law shall be enforced in the county and that the game shall be protected not only because of its value to you, but to future generations. I do not think any of you would want the next generation to say of you, "My father was so selfish that during his day he killed off all the game there was and left none for me, his son."

The game is of great value in many ways that I have not attempted to mention tonight. At our meeting at Visalia I touched on it more extensively in showing how widely it ramified the whole business of the Union, because of the amount of raw material that had to be produced and because of the manufacture of implements and ammunition, used by the sportsman from that raw material, necessitating the employment of not only skilled but unskilled labor to a large extent. In addition to that, there are many thousands employed in the transportation of the material and the finished product and in the shops retailing the same.

So I say gentlemen, take hold of this matter seriously. Think of it seriously while it is time. Do not sit down and wait for some one else to commence, until all the game of your county is swept away. Compel those who are not willing to live up to the law to live up to it. Persuade them if you can; if you cannot, prosecute them. I always believe in persuading a man first, but if I cannot persuade him I am ready to knock him down. I am confident that most men, if they see that the sentiment of the community is against the violation of these laws, will cease violating them because of the moral force of that sentiment. But if they do not it is your duty as good citizens to see that the laws are enforced.

State Deputy Fish Commissioner W. R. Welch read an interesting paper on "The Qualifications of a Game Warden." From which is quoted the following excerpts:

Recent years have witnessed a change of sentiment in regard to game and fish laws as they become better and more fully understood by the people in general. The idea formerly so prevalent that all the game and fish belong absolutely to the person on whose land it was found, or to the person who reduced it to possession, is fast giving way to the principle that it belongs to the State, and may be captured and held in possession only under such conditions and restrictions as the State may provide by law.

In the absence of any statistics it is difficult to say just how many persons hunt and fish in this State each year, but I feel safe in saying that there are not less than 50,000 persons who either fish or hunt each year in California. Several States require both residents and non-residents to secure a license before either fishing or hunting. The returns for 1903 show that in ten States, which have such a system, viz., Colorado, Idaho, Illinois, Michigan, Minnesota, Nebraska, North Dakota, Washington, Wisconsin and Wyoming, the total number of licensed hunters was 261,241. The largest numbers in any of these States was 78,823 in Wisconsin and 92,250 in Illinois, and the average in all was 26,124.

The destruction to game and fish, song birds and forests which an army of 50,000 hunters roaming at will over the State might bring about is beyond computation. In the absence of game and fish laws these persons would be free to hunt and fish in every month of the year, to shoot throughout the breeding season, to kill song and insect eating birds for food and sport, break up nests and destroy eggs, and to destroy our valuable supply of both game and fish to the point of utter extermination. The object of game and fish laws has been to prohibit indiscriminate hunting and fishing, to limit the bag and catch, to regulate the close seasons to conform with the laws of nature,

in order to perpetuate our supply of game and fish and to protect the property of the farmer from trespass and injury by the irresponsible hunters.

The value of the service of an active fish and game warden to a community is beyond estimation, and the benefits that result to the people from an active administration of his office cannot be realized until experienced and understood. Where efficient wardens are employed violations of the game or fish laws are few and far between and the supply of game and fish consequently noticeably increases; besides this fact the farmers are saved much annoyance from irresponsible persons tramping through their growing crops or otherwise trespassing on their lands, the liability of fires is reduced to the minimum. The farm fences are not broken or their gates left open and the rights of the farmers and privileges of the sportsmen are more generally appreciated and observed.

At this time this State is threatened with an influx of foreigners. These irresponsible newcomers, ignorant of both law and language, mistake liberty for license and go afield at all times of the year, without regard to reason or law and thus not only jeopardize the property of the farmers, but also the privileges granted to sportsmen by the farmers.

It is the duty of every citizen, whether he be sportsman or farmer, to report immediately to the fish and game warden any and all violations of the law of which he may have any knowledge. Where efficient and qualified wardens exist they may have no limitation in making such reports, for the warden always considers such information strictly confidential. What are necessary qualifications of a successful warden? They are many. Above all else, he must be an honest man who commands the respect and confidence of the community; he must be courageous and firm and gifted with good common sense; he should have a thorough knowledge of the game and fish laws and the mode of procedure in the courts; he must be ever vigilant and know neither friend nor foe in the discharge of his duties. He must likewise have a thorough knowledge of the country and of the habits and haunts of the game and the fish in it, and a knowledge of the different devices and methods used in their capture. He must be a lover of nature, and one who can spend days at a time in the woods, noting the ever-changing life therein. Above all, he should be a true sportsman and thoroughly familiar with sports afield and in all its departments.

A. R. Orr, of Visalia, and other speakers also addressed the meeting.

The session held on Saturday, November 25th, was brief. All business was transacted by 2 o'clock p. m.

In the election of officers President H. T. Payne was re-elected; Dr. A. M. Barker of San Jose, T. J. Edgecomb of Shasta, Dr. J. H. Barr of Marysville, H. A. Greene of Monterey and Attorney A. R. Orr of Visalia were elected vice presidents and E. A. Mocker of San Francisco was re-elected secretary and treasurer.

The following committees were appointed by the President:

Executive Committee—Dr. C. W. Hibbard of San Francisco, Floyd S. Judah of San Francisco, Dr. A. M. Barker of San Jose, W. W. Richards of San Francisco and A. R. Orr of Visalia.

Membership Committee—A. E. Mocker of San Francisco, Dr. T. J. Edgecomb of Redding and C. L. Powell of Pleasanton.

Legislative Committee—H. W. Kelly of Los Angeles, C. W. Hibbard and Frank V. Bell of San Francisco.

During the meeting sixty-five new members to the association were elected. Many of them were Marysville sportsmen. Dr. C. W. Hibbard reported upon what had been accomplished by the association at the last session of the State Legislature, mentioning incidentally the able assistance given by Hon. Charles M. Shortridge.

A memorial resolution to the late Hon. Thomas J. Sherwood was read and adopted. The press was remembered in a resolution expressing the appreciation of the association for support and assistance in furthering the cause of fish and game protection.

The next convention of the association will meet at Monterey Friday, November 9th, 1906. Invitations were received from Sierraville, San Francisco and Redding, but Monterey had the strongest backing.

The delegates and visitors were the guests of the Tute Hunting Club at the club's shooting lodge on Saturday night. They enjoyed a delicious duck stew that evening and spent some very cheerful hours in the comfortable club house. Sunday morning a duck shoot was indulged in. Birds were not overly plentiful, but enough were bagged, however, so that each of the guests took home a small string of ducks.

Following is a published list of the delegates who attended the convention:

H. T. Payne, San Francisco; A. R. Orr, Visalia; E. A. Mocker, San Francisco; I. L. Koppel, San Jose; H. A. Greene, Monterey; J. H. Barr, Marysville; F. V. Bell, San Francisco; W. R. Welch, Berkeley; R. E. L. Cobb, Fresno; C. W. Hibbard, San Francisco; C. L. Powell, Pleasanton; J. G. McMillan, San Jose; U. M. Damon, Oroville; Dr. J. S. Wren, Loyalton; J. B. Law, Loyalton; T. J. Edgecomb, Shasta; L. McDaniel, Paso Robles; E. Dryselius, San Francisco; L. Wells, Pleasanton; Dr. A. M. Barker, San Jose; George Denne, San Jose; H. P. Dohle, San Jose; Floyd Judah, San Francisco; H. W. Keller, Los Angeles; J. H. Schumacher, Los Angeles; Dr. J. H. Sutcliffe, Corning; J. F. Godfrey, Oroville; W. W. Richards, San Francisco; J. Sub. Johnson, Visalia; S. D. Merk, Paso Robles; C. C. Rivers, San Francisco; W. E. Geach, San Jose.

On a hot day drink Jackson's Napa Soda lemonades and be refreshed.

THE QUAILS OF THE UNITED STATES.

By Sylvester D. Judd, Assistant United States Biological Survey.

(Continued from December 2.)

Young California Quail.

The food of the young birds (California quail—*Lophortyx californicus* and *L. c. vallicola*, the valley quail) differs from that of the parents, as has already been remarked of the bobwhite, but the difference is less marked with the California quail. Stomachs of thirty-two young of the western birds, from one-fourth to one-half full grown, have been examined. They were collected from the middle of July to the middle of September. The food was composed of 3.4 per cent animal matter and 96.6 per cent of vegetable matter. Thirty-nine adult birds shot in the same period had eaten almost entirely vegetable food, since only 0.6 per cent of animal food appeared in analysis. Had the young birds been collected when newly hatched, undoubtedly a larger per cent of insect food would have been found. The 3.4 per cent of insect food mentioned consisted of beetles, 0.1 per cent bugs, 0.2 per cent; grasshoppers, 1.3 per cent, and ants 1.8 per cent. The vegetable food of the young is much like that of the adult. In this case it consisted of leguminous seeds, 18.1 per cent; alfalfa seeds, 18.5 per cent; miscellaneous seeds, 54.4 per cent; browse, 6.6 per cent; grain, 0.6 per cent, and miscellaneous vegetable matter, 0.4 per cent.

Mearns Quail.

The pervading colors of the male Mearns quail (*Cyrtonyx montezumae mearnsi*) are black, white and chestnut. Its thick speckles of white and its peculiar shape suggest a miniature guinea hen. The species is found on the table lands of Mexico from the City of Mexico north to western Texas, New Mexico and Arizona, but the bird, considered here, is limited to the northern part of this range. The typical Mearns quail (*Cyrtonyx montezumae*) is a bird of the mountains about the Mexican table-land, and gives way to the paler Mearns quail (*C. m. mearnsi*) in northern Mexico and the southwestern United States.

It is a confiding bird and either from excess of curiosity or from stupidity has been known to remain on the ground to be killed by a stick. From this lack of suspicion it has received the name "fool quail." It affords the sportsman with a dog much better shooting than its more erratic crested relatives. Grassy or bushy cover is more necessary to this bird than to the scaled quail or Gambel quail. Unlike the latter species, it does not pack, though it is more or less migratory. Its nesting habits are not well known. Bendire describes a nest found in Kinney county, Texas, June 22, 1890. It was placed in a depression of the ground and contained ten eggs.

Food Habits.

The food habits of the Mearns quail are not well known. The Biological Survey has examined the contents of nine crops and stomachs, secured in Texas and New Mexico during August and November. Two of the birds were killed in a patch of cactus. They contained seeds and spines from the prickly pear, acacia, and other seeds, grass blade, and a trace of insects—weevils and other beetles—besides a large quantity of coarse sand and iron ore. The other seven birds were shot in August. Two had their crops filled with the bulbs of a lily. The others also had eaten lily bulbs, which in the five birds made three-fourths of the food. The other food was prickly pear fruit, seeds of legumes and spurge, and such insects as weevils, smooth caterpillars, hairy caterpillars, bugs, crickets and grasshoppers. Cassin states that the contents of the crop of a specimen sent him from Texas by Captain French "consisted exclusively of fragments of insects, pronounced by Doctor Leconte to be principally grasshoppers and a specimen of *Spectrum*." (Illustration of Birds of California, Texas, etc., p. 25, 1856.) According to Baird, Brewer, and Ridgway, the Mearns quail appeared quite at home in cultivated fields and stubble of the ranches. (Hist. N. Am. Birds, III, p. 492, 1874.) Away from civilization it prefers districts covered with open forest, with alternate areas of grass and scattered bushy undergrowth, or hillsides covered with grass and bushes. Its habits vary considerably with the locality. Bendire records that the species lives in rocky ravines and arroyos, but quickly adapts itself to ranch conditions and may be seen running about to gather kernels of scattered grain. He says also that it is fond of acorns, mountain laurel, arbutus, cedar, and other berries, and notes that its large, strong feet are well suited to unearthing the bulbs on which it feeds. He found holes two inches deep which it had dug for this purpose. These quail often come out into mountain roads to search for scattered grain and to dust themselves. As they are readily tamed, they could doubtless be successfully introduced into other regions.

Masked Bobwhite.

The masked bobwhite (*Colinus ridgwayi*) is slightly smaller than the bobwhite of the Eastern States, and the male differs strikingly, having the chin, throat, and sides of the head black, and the underside of the body usually uniform rusty reddish. Since the discovery of the bird little has been added to our knowledge of its life history beyond some notes on its distribution, and the fact of its probable extinction within our borders. It lived on grassy plains covering a limited area in southern Arizona, south and southwest of Tucson, and ranged into northern Sonora, Mexico. In regard to the causes leading to the disappearance of the masked bobwhite, Herbert Brown writes as follows:

The causes leading to the extermination of the Arizona masked bobwhite (*Colinus ridgwayi*) are due to the overstocking of the country with cattle, supplemented by several rainless years. This combination practically stripped the country bare of vegetation. Of their range the *Colinus* occupied only cer-

tain restricted portions, and when their food and shelter had been trodden out of existence by thousands of hunger-dying stock, there was nothing left for poor little bobwhite to do but go out with them. As the conditions in Sonora were similar to those in Arizona, birds and cattle suffered in common. The Arizona bobwhite would have thriven well in an agricultural country, in brushy fence corners, tangled thickets, and weed-covered fields, but such things were not to be had in their habitat. Unless a few can still be found on the Upper Santa Cruz we can, in truth, bid them a final good-by. (Auk, XXI, p. 213, April, 1904.)

Recent information received by the Biological Survey from Sonora is to the effect that these interesting birds still survive in parts of that region, and efforts are being made by a game association to obtain living birds from there to introduce into California. The natural home of the masked bobwhite, in the hot and arid desert of southern Arizona and northern Sonora, is sufficient guaranty that the birds would thrive in cultivated sections anywhere in southern California and the arid Southwest. It would be deplorable if so handsome and useful a bird should be allowed to become extinct, and a determined effort should be made to introduce it into suitable localities before it is too late.

Beyond what Herbert Brown has stated we have practically nothing on this bird's habits. He has told us that, like all the birds of the genus *Colinus*, the males give the well-known "bobwhite" call, and he translates their rallying note as "hoo-we." He examined the stomachs of three birds. The first contained mustard seed, chaparral berries, six or eight beetles, and other insects; the second only a single grasshopper an inch long, and the third contained twenty ants, several crescent-shaped seeds, and a large number of small, fleshy green leaves.

It is stated by Bendire that in Sonora Benson found these birds only in fields where wheat and barley had been grown. Probably then the bird's general habits may be safely assumed to be similar to those of its relative, bobwhite.

THE PROBLEM OF SCENT.

We all know by experience that under certain conditions of weather there will probably be a scent, and on a hunting morning we all like to air our views and to make forecasts as to the scenting qualities of the day; but, as a rule, we are only able to give vague guesses, and having no basis to go upon except similar instances which may occur to our mind, our prophecies are frequently unfulfilled. There can be no doubt, however, that there must be working rules for scent, as there are for all other natural phenomena, writes a contributor to the London Field. Many scientific facts have been known for centuries, but modern progress only dates from the time when, by presuming a rule from certain known facts, scientists were able to forecast other results, and so have a guide to their experiments. It would be far beyond my power to attempt to deduce any working formula for scent, but I shall endeavor to show that the problems which present themselves on all sides when we consider them are not so abstruse as they are commonly supposed. I shall first state certain facts which have been established by scientists, and then we shall see how far these facts help us to account for some of the vagaries of our subject.

Scent itself consists of extremely minute particles given off from the whole of the body, which, although much too small to be perceived by either the organs of taste or touch, are readily appreciated by the organ of smell. It has not yet been decided whether the sense of smell depends in the first instance on a chemical or on a physical process. Ramsay has a theory that the sense of smell is excited by vibrations of a lower period than those which give rise to the sense of light and heat. It is, however, necessary that the air containing the odor be forcibly driven against the membrane, and that the membrane itself be moist; if it is dry, or too wet, or covered with too thick a layer of mucus the sense is much weakened. The latter fact we have all experienced when we have had colds in the head. Any irritation, such as produced by dust or severe cold, will cause excess of mucus.

We will now consider the conditions which affect the amount of scent or particles given off by a hunted animal. This amount depends on the size, nature and bodily condition of the animal, and is an important consideration, as the greater the number of particles, the more powerful is their effect on the nose of the hound. It is obvious that the larger the animal the greater will be the number of particles given off; thus a deer has a stronger scent than a fox. On the other hand, the scent of certain smaller animals appears to be more powerful, though no doubt less in quantity. A careful observer of nature has placed this animals in order of strength of scent as follows: 1, otter; 2, martin; 3, polecat; 4, deer; 5, fox; 6, hare. The constitutional condition of the animal also affects its scent-giving capabilities, but we have little knowledge on the subject, beyond that the temperature of the body appears to exercise some influence. Thus a setting bird, which is more or less in a state of fever, has very little scent, except immediately before hatching, when the fever subsides; similarly with a beaten fox, which is also in a feverish condition, the scent fails. The pace at which an animal is going probably influences the scent. Apparently when in a state of repose or in very slow motion there is but little discharge of effluvia from the body; but with increase of action there is also an increase of scent. This is exemplified in the case of a squatting hare, which has practically no scent, and how often have foxes been drawn over and viewed after hounds have left the covert? There are probably many other factors which affect the discharge of scent, and if we knew the reasons for some of the complicated maneu-

vers which hunted animals, guided by their instinct, execute, we should learn some curious facts in physiology.

We now come to the forces which act on the particles after they have left the hunted animal. In order that there should be a scent it is necessary that they should not be scattered before the pursuer arrives, and also that there should be moisture to damp his olfactory nerves. Here we have conflicting conditions, and are confronted by the main difficulty which prevents us from correctly estimating the scenting qualities of a particular day. Unless the particles are held down by a heavy atmosphere they have a tendency to rise above the level of a hound's nose; as how often one can smell a fox oneself when hounds are not able to make anything of it. Now a heavy atmosphere means a dry one, i. e., a high barometer, but at the same time moisture is essential, and so to have a good scent these two conditions must be reconciled. Perhaps the best example of a favorable condition is when the glass jumps up suddenly after wet weather, which in winter usually results in a sharp frost.

This is well borne out by the fact that many of the best runs on record have been immediately followed by a long frost. While on the subject of the weather, we must remember that a strong wind is a deterrent to scent, as it scatters the particles, the exception being when hounds run up wind, the particles in this case being forcibly driven against the membrane, which increases the power of the scent. At the same time, on a perfectly still day, there is generally a bad scent, one with a gentle breeze being more favorable. The temperature of the atmosphere and ground must also be taken into account; it is probably the best when they are much the same and not too cold. It is extremely difficult to arrive at any satisfactory conclusions when dealing with so variable a subject as the weather, and, as will be seen from the above statements, we have several necessary conditions which are directly opposed to each other; it is, therefore, very hard to say when the perfect state is arrived at. It is quite certain that everyone is able to cite instances which appear to be in direct contradiction to what I have written. Sometimes with a low barometer and drenching rain we have excellent sport, though in this sort of weather there is seldom a scent in covert; again, in September and March hounds often run hard when the ground is as dry as a bone; but so many things come in that in these cases probably the other conditions are favorable. Finally there is the state and quality of the ground. A wet, heavy country usually holds a scent, and this is but natural; on the other hand, when the ground is over-saturated the scent seems to improve when hounds get on to lighter soil, which bears out the fact that too much moisture is undesirable. To sum up, for a probability of sport we should look for a high barometer, a fair amount of moisture, and a gentle breeze.

GOSSIP FOR SPORTSMEN.

Lost on Lake Tahoe.

Duck hunters have been lost on San Francisco and San Pablo bays in bad weather many a time, but the plight of two sportsmen on Lake Tahoe one day last month is a new one in the line of hunting mishaps.

In the middle of Lake Tahoe, surrounded by a heavy fog, lost, not knowing north from south, and night approaching, is the position that Dr. George F. Kelley and H. W. Wilmoth were in while hunting for ducks on the lake Thursday afternoon, November 17th. About noon a heavy fog came up and not giving the matter much consideration the hunters kept up their search for the water fowl. They did not realize their danger until they observed that night was near and the fog was dense and the direction to the nearest shore resolved itself into quite a puzzle. They were out in a launch.

For a while they were completely lost and unable to get their bearings. Finally, just after dark, a lift in the fog showed where there was a light on the distant shore and in due course the launch made the beach, from which point the lost hunters were enabled to reach Tallac.

They returned to Truckee Friday morning none the worse for the adventure and with a good string of ducks.

Northern Duck Hunting.

A Seattle report descriptive of duck shooting conditions near there last week states:

It has been a bad week for ducks, and poorer still for geese. Few, if any, limit bags have been reported, despite that there were at least three days when the shooting should have been good.

The Mecca of nearly all the duckmen was the northern flats. The Skagit and all of the La Conner country have been teeming with mallard and sprig, but they are of the first flight, and as wise as a lot of pickpockets. They know a blind when they see one, and have grown so wary that they will not even fly over a stump, to say nothing of swimming within range of one.

It has been the same way on the Nisqually flats, at Oyster bay and on all the other ducking grounds around the Sound, and the experts have made up their minds that the best thing to do is to be patient until the Alaska ducks come down.

The annual flight of the Alaska birds is known as the "second flight," and it always assures good shooting. The birds are fresh from the Northern grounds, and do not know the sound of a gun when they hear it, so that good kills can be counted on. As a usual thing, the second flight has begun before this time, but for one reason or another this year it is quite late.

Strike—if they don't give you Jackson's Napa Soda when you ask for it.

Klamath Country Will Be Opened.

Sportsmen will be pleased to learn that work on the new railroad from McCloud to Laird Landing on Klamath Lake is progressing rapidly and by next spring it is anticipated through trains will be running. The road is being constructed by the McCloud River Lumber Company and will open up, to city sportsmen, practically a virgin territory. The roadbed is now graded for twenty-five miles beyond Bartle, or near Laird Landing on Klamath Lake. The grading gangs now number 300 men. Track-layers will be set at work at once laying steel rails on the twenty-five-mile gap between Bartle and Klamath Lake, the grading gangs continuing their work toward Klamath Falls.

The distance from Upton, the present junction point on the Southern Pacific, to Klamath Falls, is a trifle over eighty miles, according to the railroad surveys. The McCloud Railroad is now completed thirty miles beyond the town of McCloud and the roadbed graded twenty-five miles farther. The present terminus is two miles east of Bartle Station and thirty miles beyond McCloud.

On the Paper Mill.

Steelhead angling in the tidewaters of the Paper Mill, near Point Reyes station has not been productive of many fish since the recent rains. A number of quinnat salmon have been taken, however, by die-reffnt anglers. Last Saturday, Jas. Watt of this city hooked a thirty-two pound salmon and after playing the fish for forty minutes landed it.

A number of salmon have been caught recently in the pools of the marsh sloughs near Point Reyes. A fish weighing forty-three pounds was captured by a hunter near Millerton this week.

Santa Clara Notes.

The recent rains and stormy weather drove the ducks in thousands into the Alviso marshes. Many of the birds were newly arrived northern ducks. As a consequence good bags of canvashacks, mallard, teal and widgeon fell to the guns of the Santa Clara valley hunters.

Quail are reported to be numerous on many hunting grounds in the county.

Large flocks of sandhill cranes have also put in appearance on the marsh lands surrounding Alviso. The sandhill crane is looked upon by many as making a finer dish than either turkey or chicken. One of these rare birds was brought in by an old hunter and placed on sale at a San Jose fish and game market, where it attracted much attention. According to good authorities the appearance of the sandhill crane as far south as this and in such large numbers indicates that fire storms and cold weather prevails along the northern portion of the Pacific coast.

Reports from Los Gatos state that the foothills above that place and north and south along the range of hills abound in large flocks of wild pigeons. The snow that has fallen on the higher portions of the mountain range have driven the birds down lower, since their food supply is only found where the country is open and the land is being prepared for the crops.

Two years ago thousands of these wild pigeons flocked into the valley and did a great deal of damage to the farmers, devouring the seed grain as soon as it was sown. The wild pigeon makes the most toothsome of dishes, especially where they are grain fed. They are speedy flyers and offer the best of shooting to the nimrod.

Big Striped Bass Scarce.

Anglers who have made it a practice to saunter through the local fish markets for a year or two past are unanimous in declaring that the shrinkage in the supply of striped bass is evident more and more every day. Time was when fish of over 25 or 35 pounds' weight were plentiful; now they are scarce as hen's teeth and have been so for some time past. This is regarded as a strong indication that the incessant netting of the fish, every day in the year, despite the statutory prohibition of netting fish on Saturdays and Sundays, is bearing the fruits of rapacity and indifference to the future supply. The present condition was prophesied several years ago by men of observation and experience, but the warnings were laughed at or ignored.

No water in the world, nor any variety of fish, however prolific, can stand the draft that is made on the striped bass supply. The decrease from now on will not be gradual but will go on at an increased ratio. The remedy suggested for the preservation of the bass, is a close season of two or three months.

Local sportsmen have had, generally speaking, good sport on the various game preserves. The best shooting has prevailed on the Suisun marshes, where limit bags have been made by many hunters.

Many of the canvashacks and mallards killed in the marshes are found to be in poor condition. The best conditioned mallards come from the San Joaquin and Yolo basin tule sections.

W. H. Seaver was a recent guest of the Gridley Gun Club. He shot four days and got limit bags easily in a very short time. The club's preserves embrace a tract of 7000 acres. The district is a natural feeding ground for ducks and geese and is one of the best hunting grounds in the state. The club has a membership of 100 sportsmen and a large and comfortable club house for their accommodation.

Spawning of Salmon and Trout.

Observation has shown that on account of the predatory habits of salmon on the Pacific Coast only about 1 per cent of the spawn comes to maturity under the ordinary conditions of fish, life, whereas by artificial methods from 95 to 98 per cent is the result. The California fish hatchery at Sisson is

supported for the special purpose of keeping up the supply of salmon and trout in the rivers and lakes of the State. These two fish belong to the same family, though there are many points of difference between them.

Salmon eggs are about a third of an inch in diameter, the trout eggs being only half as large. The former are a yellowish pink, not unlike the color of the flesh of salmon; the latter pale pink. The artificial method of securing spawn is simple, but it requires skill and haste. Salmon begin to spawn at the age of three or four years, the time being about the same with male and female. Trout begin somewhat earlier, the female at three years and the male at two. By a gentle pressure of the body the eggs are forced into a small pan, where the milt of the male is poured over them and left for a very few minutes, after which the eggs are thoroughly washed and put into the hatching baskets. These are of woven wire, painted with asphalt paint, the meshes just small enough to keep the eggs from falling through, and large enough that the worm-like thing that comes out of the egg can drop into the trough underneath, which is always full of running water.

Salmon never eat during the spawning season. When they pass from salt water into fresh water in search of a nesting place they are very fat, having stored up a food supply for the coming months of struggle, for that is what the spawning season always is. They spend three or four months in fresh water, exploring and fighting over the places they find. Meanwhile, as they do not eat, their alimentary canals seem to wither up from disuse; and when at last, the spawning season is over, the actual time, barring nest-hunting, being from 10 to 14 days, the fish are so exhausted from the struggle, lack of food and the effort of reproduction that death is inevitable. The life of a salmon is spent in the perpetuation of its kind, but to the credit of each is an average of five thousand eggs.

With trout it is different. Their term of life is ten or twelve years, and in a hatchery it is only necessary to renew the stock at intervals, introducing the new among the old.

Salmon eggs require anywhere from forty-five to 180 days to hatch, according to the temperature of the water. For trout the time is from forty-five to sixty days. The first sign of life is the formation of two black spots, which are out of all proportion to the tiny egg, and stare through the thin white film that covers the pinkish egg. These are the eyes, and as they develop a thin white line begins to form the backbone of the future fish. About this a jelly-like substance forms, and at last the film that serves as a shell loosens and through a mesh of the basket this thing that will one day be a fish drops. It looks like a worm with a very large pouch fastened to the under side.

This pouch is the umbilicus and contains the yolk of the eggs, which is gradually absorbed by the embryo fish, and is the only food it has for from fourteen days to five weeks. When at last the baby fish has exhausted this food supply and by some mysterious means has mastered the art of swimming, he rises from the bottom of the trough where he has wriggled all this time and is suddenly carried by the flowing water into another trough, where he is fed four times a day with a mixture of raw liver, chopped very fine, and sweet curd. Occasionally, to keep the fish in condition the diet is varied with beef and salmon, the latter proving a welcome change to these cannibal creatures. After fifty or sixty days of feeding the fish are from an inch and a half to two and a half inches long, and are big enough to shift for themselves, so they are scooped out in nets, loaded into big milk cans and sent away to be turned loose in a river or lake. A trout is a trout from the day it is born, but not until it gets into the ocean is a salmon a salmon. While it lives in a river it is a parr.

On the western coast August and September are the months for the principal run of salmon. Early fall is the season for the eastern trout, followed by the German brown and Loch Leven in the late fall. Winter and early spring are the season for rainbow trout, and along in February comes the eastern brook trout, which is followed by lake trout and mykliss, commonly known as eutthroat trout, from a peculiar red marking on the throat.

Wild Animal Skins Scarce.

A noticeable scarcity, with a corresponding increase in value, is that of the skins of wild animals. The spread of civilization is the gradual extermination of the monarchs of forest and plain, the jungle and the hills, and in consequence, the hides of both large and small wild animals now are prized specimens of museums or ornamental features of the clubhouse, drawing room and cozy corner.

The skin of the lion—the king of beasts—is now among the most valuable of the rare skins. It is kingly, even as was the animal himself, and reveals the great strength and courage—or supple cunning—of the mighty form that it once encompassed. The skin of the full grown lion is about three yards in length by one and one-half yards in width. The hair is neither pretty nor bright, but for all that, the great shaggy mane crowns it, like a rare jewel, in a conventional setting, making a well-maned skin valuable indeed.

Much prettier is the skin of the tiger than that of his feline cousin, the lion. So, too, does the tiger's skin show the character of the beast which it once enveloped and protected. Its bearded cheeks reveal the animal's ferocity and bloodthirsty cunning, the black and yellow stripes and the white belly coloring of the big cat suggest the stealthy nature of the former owner.

The South American jaguar furnishes a pretty skin, despite its reddish white belly and its spots instead of stripes. The leopard, also, has a pretty pelt, its

fur being light yellow with black spots. The skin of the black panther, a denizen of the Central American and Southern Mexican jungles, is sought for very much by collectors and others.

Bear skins are trophies in many a city and country home. The black and brown bears, the commoner and more plentiful varieties of the bruin family, are the most frequent. The Polar bear supplies a beautiful, soft, white, furry skin, but these skins are very rare. The skin of the American grizzly (*Ursus horribilis*), is also a rarity and good specimens bring big prices, for this animal is becoming scarcer year by year, despite his ferocity, strength and gameness, for the high power repeating rifle is a handicap over which the grizzly can not prevail.

Although moose and deer are common game for hunters, all over the continent, yet it is a curious fact that comparatively few hunters or sportsmen have succeeded in preserving their hides so that the hair will remain on the skin for any great length of time.

The American black wolf skin, with white spots on its snout and breast, is admired by some people. The Siberian wolf furnishes a fine, soft fur skin.

Among the farmer boys in the United States it is a popular sport to catch foxes during the winter and to tan their skins for rugs, robes and other ornamental purposes. The fox skin is to-day not by any means as valuable as are the skins of larger and fiercer animals, though the fox, in many sections, is growing more and more scarce. The same might be said in regard to wildcats, raccoons, minks, etc., and the day of the coyote, save in some limited and remote areas, is also drawing to a close.

Among the present day valuable skins is considered a coat made of the skins of reindeer fawns, the pelts taken from the fawns when but a few days old. These skins match perfectly in color, the garment is made double, so that the coat is the same outside and inside. Such a coat is as light in weight as an ordinary raincoat, waterproof and far warmer than ordinary fur, and, it is said, can not be purchased for less than several thousands of dollars.

Among the other skins that are very valuable may be mentioned that of the Manchurian tiger, these beasts having a longer fur than those of the Indian jungles. Skins of this variety of tiger are obtained fourteen feet in length. So big are these northern China tigers that it would not be far fetched if a hunter remarked that he had been "chased by a trainload of big cats" in the event of a miss and rapid retreat to cover.

A recent choice specimen noted in a trade journal was the skin of a monster grizzly, the animal when alive weighing 2200 pounds, it is claimed. The robe was fourteen feet long and the mounted head portion was two feet thick.

Buffalo robes, some few specimens of which, taken good care of for years, are now and then obtainable and for a good price.

Among the small animals whose pelts supply the market are New Zealand rabbits. They are fairly well sought for in this country, although not so rare or valuable as many other kinds of skins.

DAIRY DOTS.

It takes healthy and well-fed cows to make the highest quality of milk.

The best butter maker can not turn out a good product from tainted milk.

The value of the cow depends to a large extent on how the heifer is cared for.

Breed the cows to a good bull, in order to have a calf that will make a good cow or a valuable steer.

Churn at 60 degrees in winter and never let the cream freeze if you would make butter of high quality.

The dark, badly ventilated stable is the one where disease germs flourish. Let the sunshine and air in.

Don't forget about currying the cow. This pays in the saving of feed and in the cleanliness of the milk and butter.

The dairy farmer who undertakes to do business on the eight-hour plan will soon get acquainted with the sheriff.

An old English dairyman once said to the writer: "You can't get anything out of a cow that you have not first put into her."

Regular hours and kind treatment make good dairy cows. No rough talking, brutal man should ever be allowed near the cows.

Mixed farming pays better than any specialty crop, and the mixed farmer who leaves out dairying rejects one of the most profitable branches of agriculture.

Those who are so situated that they must make their butter at home should try to make an extra quality. Such butter always finds a ready market in any town.

If you do not own a Babcock tester try keeping the milk separate and test your cows by the churn. It is worth while to know how much each cow is doing for you.

Teach the helpers to lead while they are young and do not let them forget it. Nothing is more disagreeable to handle than a cow which has not been trained to the halter.

When we sell butter only, we sell sunshine and water. When we sell whole milk, we sell the fertility from our farms. In a ton of butter there is

less than a dollar's worth of fertilizing elements.

A manufacturer of cream separators told us that he had noticed that cows which are out in the sunshine every day make the yellowest butter. Whether this is true or not, it is established that sunshine is good for cows.

String a wire just under the ceiling the whole length of the cow stable, just behind the cows. On this put a running hook on which to hang the lantern so you can slide it back and forth. Then no cow can kick it over and cause a fire.

As a rule a kicking cow shows that she has been around a kicking man. If she kicks because of sore teats, she cannot be blamed, for it is her only way to enter a protest. Sore teats should not be allowed, as they show careless treatment.

GAIT OF THE DRAFT HORSE.

The normal gait of the draft horse is a walk. He was not made to trot or run. It is important, however, that he acquire when he is first broken the habit of walking lively and walking slowly when a slow gait is required.

The gait is largely a matter of inheritance, and the draft stallion or mare that can walk briskly should in all cases be preferred to one that moves off as though it had all the time there was in which to go a short distance.

Much, however, depends upon the trainer. Most farmers when they break colts put them alongside of some steady-going old mare, a regular "loitermobile," which may be all right to start with; but as soon as the colt moves off himself let him acquire a brisk walk, as though the time was too short for him to do the allotted work. While for plowing heavy sod a slow, steady gait is inevitable, and in plowing corn for the first time preferable, in almost every kind of farm work a better job will be done by a team that knows how to step up briskly. The training of a draft horse is a

TRADE NOTES.

Averages Reported.

Westville, Ill., November 9th—W. D. Stannard, first general average, 140 out of 150, shooting "DuPont." W. Bell of Hoopestown, Ill., first amateur and second general average, 125 out of 150, shooting "Infallible." A. P. Smith of Goodwine, Ill., second amateur and third general average, 124 out of 150, shooting "DuPont" and "Infallible." F. Ragle of Westville, Ill., shooting "DuPont," and T. J. Blessing of Milford, Ill., shooting "Infallible," tied for third amateur average, 122 out of 150.

Hoopestown, Ill., November 4th—W. D. Stannard, first general average, 93 out of 100, shooting "DuPont." A. P. Smith of Goodwine, Ill., first amateur and second general average, 87 out of 100, shooting "DuPont." A. Ferris of Crescent City, Ill., second amateur and third general average, 79 out of 100. J. A. Seekatz of Hoopestown, Ill., third amateur average, 78 out of 100, shooting "DuPont."

Oxford, Ind., November 16th—A. P. Smith of Goodwine, Ill., and C. B. Lamme of Attica, Ind., tied for first general and first amateur average, 129 out of 140, shooting "DuPont." J. G. Miller of Oxford, Ind., second amateur and second general average, 127 out of 140, shooting "New E. C. (Improved)." W. D. Stannard, third general average, 126 out of 140, shooting "DuPont."

Every Sportsman Should Get One.

One of the most handsomely gotten-up gun catalogues we have seen is that issued by The Hunter Arms Co., of Fulton, N. Y. The cover is printed in colors, the design showing a sportsman seated in a car, his dog by his side and his gun case resting against the seat. The different grades of guns are fully described and illustrated by tinted half-tones. The different parts of the mechanism are all shown in cuts. A beautiful colored picture representing a scene in the field, "Brush Shooting," and one showing a hunter in a blind, duck shooting on a cold, raw day, are worthy of being framed.

The illustrated pages descriptive of the Hunter One-Trigger guns are replete with information of much interest to every devotee of the shotgun.

The title page illustration is a fac simile, in colors, of the beautiful gold medal awarded at the Lewis & Clark Exposition, Portland, Ore., to the L. C. Smith Hammerless Gun and the Hunter One-Trigger Gun. Full directions are given for ordering guns made to measure. Copies will be sent to those requesting the same, and mentioning this notice.

U. M. C. News Notes.

At Bound Brook, November 16, where 20 shooters took part, first honors were accorded to U. M. C. shells in the gun of Mr. Welles, who scored 146 out of 150. Mr. Welles most always wins the high average, and he always uses U. M. C. shells. Mr. G. W. Cross won the prize gun offered, using U. M. C. ammunition and a Remington shotgun.

Mr. W. H. Heer won another high average at the

Pittsburg, Kan., tournament, November 9 and 10. His score was 387-400, and his shells were, as usual, U. M. C.

On November 8 at Walnut Springs, Tex., Mr. H. Murrell broke 124 out of 150, winning the high amateur average. Mr. Murrell used U. M. C. shells.

At Jackson, Tenn., November 3, Mr. A. C. Rauscher won a cup given for the highest score, breaking 24 out of 25. Mr. Rauscher is to be congratulated upon such a fine score. U. M. C. shells were selected by Mr. Rauscher to win this prize.

Supply Was Unequal to Demand.

The demand for Balliste has been so great among Coast sportsmen that the supply ran out and the Coast agents, Baker and Hamilton, had to fill orders to the trade with one-pound tins. The larger bulk packages were sold off some time ago in response to the unprecedented demand for Balliste coming from every section of the Coast.

Efforts to procure a new stock from the East were for a time unavailing, owing to a rush of orders for Balliste.

Baker & Hamilton announce that an invoice of Balliste will reach this city about December 10th.

Balliste is reliable at all times and in all climates, is unaffected by heat or cold, and gives results in penetration, velocity and recoil—that's what you want.

Peters' Points.

The championship of Richmond, Va., was contested for on the grounds of the Richmond Gun Club, Oct. 28th, and resulted in a victory for Dr. B. L. Hillman with a score of 93 out of 100. Dr. Hillman, in accounting for his success, gives a good share of the credit to the Peters Ideal factory loads which he used.

Mr. E. H. Storr won high professional average at the Weldon, N. C., tournament, October 24-25, and Mr. E. F. Killette high amateur average, both using Peters Ideal shells.

The Urbana Ohio Gun Club was successful in landing both the team and individual trophies which have been contested for during several months past by the gun clubs of Springfield, St. Paris, Urbana and nearby points. The final shoot was held at St. Paris on November 1st, the Urbana team winning the Peters team cup with a score of 210, and Mr. E. W. Holding of Urbana won the individual trophy with a score of 49 out of 50.

The Woodward trophy contested for during the past season by the members of the Sandusky Ohio Gun Club was finally won by Mr. John Deist, who thus establishes his claim to the championship of the club. Many of Mr. Deist's highest and most regular scores were made with Peters factory loads.

At Boundbrook, N. J., November 16th, the New Jersey Individual State Championship was won by Mr. F. C. Bissett, and the first and second amateur averages for the day's program were won by Messrs. E. F. Markley and J. Pleiss, all using Peters Ideal factory loaded shells.

Jackson's Napa Soda untangles the feet.

comparatively simple matter, and yet it is of very great importance to so train horses that they will normally move briskly, and at the same time adopt a slow, steady gait when the necessities of the work on hand require it.—Wallaces' Farmer.

GROWING MONEY ON THE HOOF.

For a young farmer just starting out to battle for himself in the fight for money, the most effective means to pursue is to grow money on the hoof. Buy a few good bred heifers of the breed you like best and take care of them. Select a pedigreed bull and use him on the common cows already on the farm. The appreciated value of the first crop of calves will go far to pay the purchase price. Use only a high class individual, even on scrub cows, if you wish to get the best results from such a cross. The offspring will show marked improvements in physical characteristics. Females bred to a pure blood highly prepotent bull will transmit to their progeny a still stronger tendency toward uniformity of type, which will neutralize in a large measure the original blood. There never was a better time for the farmer to begin breeding pure bred stock. There is no safer and none promises such steady, sure returns.

The custom of letting cows stand untied in their stalls is growing among dairymen. It is more like having them in an open pen or lot, they keep cleaner and are as easily handled as when tied.

Most farmers should not depend upon the mills for their cow feed. They should grow so much corn, alfalfa, cowpeas, sorghum, soy beans, peanuts and hay that they will not need much besides what they raise.

The best way, or at least one of the best ways, to keep young cows from learning to kick is to handle them very gently at first. Teach them to be handled, and that they will not be hurt.

There is no question but that cut (chaffed) fodder of all kinds is better relished and fed with less waste than long forage. Whether the saving thus effected will compensate for the attendant expense will usually depend upon the market value of the hay or other material, although it should not be forgotten cut straw, stover or other stuff makes better bedding for the stable.—Hoard's Dairyman.

The eager feeder sometimes overfeeds the calf. Some claim that more calves are injured by overfeeding than by not feeding enough.

Cows may be successfully kept without any pasture. There are some dairy cows who do not graze a blade of grass from one year's end to another, and who do pretty well, too.

In handling young cows, a soft brush used upon the udder will be found very acceptable to them. They seem to relish it and appear anxious for the brushing time to come.

It would be a strange affair if a good cow were to result from a poorly fed, poorly tamed calf. Yet sometimes it does occur, and a good cow does come in spite of conditions.

Very few dairy farmers make such a poor out at farming as to be anxious to sell out. Almost all of them make it pay.

Dry cows should not be fed as liberally as those in milk, though they should not be left to rustle for themselves.

Bran is being adulterated with rice hulls. Careful feeders examine the feed with a microscope for adulterations.

A writer claims that there are very few "dead-beat" cows, and that their unprofitableness is owing to their management.

AT WHAT AGE SHOULD A PIG WEIGH 200 POUNDS?

If a pig should be to weigh 200 pounds? This will depend upon several conditions. First, the kind and number of animals you have; second, the facilities you have for caring for hogs, and, third, the man who feeds and takes care of them. If he is not a kind-hearted man and has no particular liking for such work, he will never make a successful swine feeder, says Farmers' Sentinel. It is also important that he has a good breed of hogs with which to work, for it does not cost as much to raise a pure bred hog as it does a scrub.

Again, there is no stock that will respond more quickly to kind treatment than the hog. Farmers, generally speaking, do not pay enough attention to the milking qualities of their brood sows, their disposition and constitution. I never could make a hog as quickly out of a pig whose dam was a poor milker and minding feeder, as one whose dam was a good milker and a regular gourmand to eat. Neither could I ever get a pig to give compound interest for the feed consumed if he did not have a kind disposition and good constitution.

Too much stress cannot be laid on these points. Every time you meet your hogs and they hear your voice they should greet you with a grunt. On the other hand, if they do not seem to enjoy your company, but show the whites of their eyes, they are not the most profitable kind of hog to keep and the sooner a man gets rid of such pigs the better it will be for his pocket book. Kind disposition, and good constitution means great feeding capacity with wonderful assimilating powers—the only proper foundation to build upon.

Having pigs of the above description to begin with, plenty of soaked corn and ground wheat and judicious feeding, they will weigh one pound for every day they are old. If you only have a few you can make them do better. In addition to the above ration they must have dry quarters to sleep in. This does not necessarily mean a mansion, but it must be constructed so as to be dry all the time. Damp sleeping places are fatal to all kinds of young stock. With the pig, if it does not kill him outright, it will cause a train of ills that will cost his owner nearly all of the profits, if not all. They must be kept free from vermin. Have a good sized grass lot to run in. They must be provided with green food of some kind all the time. The range should be sufficient to give them good exercise, else they will not do their best. Also, they should be provided with pure water all the time. I never had anything on the farm that saved me more work, paid me as well for capital invested, or gave me more satisfaction than a good hog waterer. See that they have plenty of good shade and make them as comfortable as you possibly can.

With plenty of ground wheat and soaked corn, judiciously fed, pigs should weigh one pound for every day they are old. If you only have a few you can make them do even better than that. Ground wheat is the best feed for brood sows and their pigs I

have ever fed, but if they have appetites as hogs should have, you have to be careful not to give them too much at one time or you will founder some of them, thereby curtailing your profits at a great rate.

I never feed hut twice a day and never have fed ground wheat exclusively to fattening hogs. If I ever do, I shall make a self-feeder and feed it dry. Have fed plenty of soaked wheat, but it is a wasteful way of feeding; better feed whole wheat dry.

It is my endeavor to grow healthy pork as cheaply as I possibly can, hence I never feed much corn to pigs or brood sows. With plenty of green feed of some kind and a rich slop made of ground wheat you can keep them contented and well satisfied, which is an important point, and soon have a great big frame (not deathly poor by any means) ready for the finishing process. At this stage you can gradually slacken on your wheat slops, if you like, but at the present prices in this country wheat is just as cheap as corn to feed to hogs. I always like to finish them off on nearly all soaked corn, as the meat is a little firmer and they do not shrink so much in shipping. I never feed any condiments to my hogs. Neither do I use the slop barrel any more. Feed all foods as pure and sweet as you can.

WINTERING THE FALL CALF.

If the calf is worth carrying through the winter it is certainly worth caring for properly, and by properly is meant good food and water, and proper care. If the calf is strong and healthy it ought to pay well for the best attention that can be given it. First of all it needs a dry, clean place, not warmed by artificial heat, but as warm as lack of draughts in a comfortable stable will make it.

The early days of the calf, just after weaning, are of great importance and too much care cannot be taken to see that the milk given it is absolutely fresh and pure, and fed in proper quantities. As a rule, the calf will properly take care of eight pounds of milk per day, which amount can be gradually decreased until at a month old it is consuming twelve pounds daily. About this time it ought to become interested in hay, and after awhile will begin chewing its cud.

A calf built up in this manner during the winter will be in excellent shape to turn out to pasture in the spring and get most of its living until fall, when you will have a splendid animal, one you will be proud to add to your herd.

FLAXSEED FOR MILK COWS.

Whenever flaxseed is fed it must be used in small quantities because of the cathartic effect that it will have upon the animals, says Hoard's Dairyman. It should be fed in very small amounts to begin with, say a tablespoonful twice a day. The amount can be gradually increased until the animal is receiving a pound a day, or to the point where it begins to show a loosening effect upon the animal's digestive organs, but we do not think it is advisable to feed over a pound of it a day.

A beautifully marked cow is attractive, but breeders have in view the quantity and quality of the milk she gives. Fads are all right, but they don't pay as well as butter and milk.

The best butter makers are using seven-eighths of an ounce of salt to the pound. They let it stand twelve hours after the first working, then work it again, and pack it into jars.

A runty calf will eat its head off two or three times a year, and then not be of any profitable value.

FINE YOUNG ROADSTER FOR SALE

A GENTLEMAN, WHO HAS MORE HORSES than he can keep, wishes to sell a fine young Roadster, and will accept a very moderate figure. The horse is four years old, a bay gelding, sound and a good looker. Has been in a trainer's hands but thirty days and can show a 2:30 gait. Is not afraid of automobiles or electric cars. Wears no boots, is as sweet a roadster as any man wants, and will be fast. For further particulars address OWNER, Breeder and Sportsman office, 36 Geary street, San Francisco.

Registered Shire Stallion FOR SALE.

JET BLACK STALLION; WEIGHT 1750; seven years old. Is a blocky built, big boned horse and a sure foot getter, and his colts will be shown. Price reasonable. For further particulars apply to office of BREEDER AND SPORTSMAN.

McKinney Mares and Stallions FOR SALE.

Three Black Mares by McKinney 2:11½
One Brown or Black Weanling Filly by Lecco 2:09½

The Mares are BESSIE D., that is out of Stemwinder, the dam of Directum 2:05½; ROSE McKINNEY, that is out of a mare by Forrest Clay 1934 and is the dam of Almaden (2) 2:22½, winner of Breeders Futurity and Occident Stake; RAGSY, that is out of Babe by Ferdinand 1835, son of Strathmore.

The Weanling is by Lecco 2:09½ and out of Rose McKinney. Also, one three-year-old Stallion—the best bred one ever sired by McKinney; dam Elsie (dam of 5 in list) by Gen. Benton; second dam Elaine (dam of 4 in list) by Messenger Duroo; third dam Green Mountain Maid (dam of 8 in list) by Harry Clay 45. A grand young horse; has trotted a half in 1:14 as a two-year-old.

Will sell one or all of the above at fair prices. Address C. A. DUFFEE, 529 Thirty first St., Oakland. Or Race Track San Jose, where horses may be seen at any time

TWO HIGH-CLASS STALLIONS For Sale at a Bargain.

JOHN A. 2:12 3-4 (8), pacer, sired by Wayland W.; dam Lady Moor by The Grand Moor. Has paced miles in 2:08½ and can do it again when in condition. He has some very fine looking colts, yearlings and two-year-olds. JOHN A. is a good individual, a high-class race horse, and will make a great sire of race horses and high-class roadsters.

SIR CARLTON 2:36½, trotter, three years old, by Nutwood Wilkes; dam Lady Keating by Stam B; second dam Abbie Woodnut (dam of Dlawood and Abbie) by Nutwood.

These horses will do to race the coming season and will win in their classes. It is imperative that I sell them without delay, as my business calls me elsewhere and I will be unable to give them attention. For reasons stated I will sell both of them for less than I would have taken for one of them some time ago, and I would like to hear from some of the parties whose offers were not accepted, and believe we can make a trade. Apply to or address A. E. MASTIN, 1016 Nineteenth Street, Sacramento, Cal.

Just Enough

and just as they want it. The right way to salt animals is to let them help themselves.

Compressed Pure-Salt Bricks

In our Patent Feeders, supply refined dairy salt. They mean animal thrift. They cost but little. Convenient for you and your animals suffer no neglect. Ask your dealer and write us for booklet.

Patentees, Mfrs.,
Brooklyn, N. Y.

FOR SALE OR LEASE.

Two Prince Airlie Stallions.

PORTOLA 37413, a handsome golden bay 7 years old, 16 hands, weighs 1190 lbs.
MENLO BOY 37401, a magnificent brown with white points, 6 years old, 16.1 hands, weighs 1200 lbs.

These two horses are full brothers, being sired by Prince Airlie 28945; he by Guy Wilkes 2:15½, sire of Fred Khol 2:07½, Hulda 2:08½, Seymour Wilkes 2:08½; first dam Signal by Del Sur 2:24; second dam Lady Signal 2:35½ by Signal 3327. Both of these horses are very fast for the amount of work, being only a few months last year, showing quarters around 34 and 35.

For further information apply to P. H. McEVOY, Menlo Park, Cal.

JACK FOR SALE.

A BLACK JACK WITH LIGHT POINTS; large, heavy boned, prompt and a good handler. Is a good foal getter and his foals are excellent individuals. Price very reasonable for prompt sale. Address for further particulars, S. B. WRIGHT, Santa Rosa.

McKINNEY FILLY FOR SALE.

I OFFER FOR SALE AT A REASONABLE figure the black two-year-old filly SUKEY MAC by McKinney 2:11½, dam Winnie Wilkes 2:17½ by Roy Wilkes (son of Mambrino Wilkes and Fannie by John Nelson); second dam Pet by Cresco 498; 3d dam Topsy by General Taylor SUKEY MAC is entered and paid up on in the Pacific Breeders Futurity for next year. She has only been worked a very little and has paced quarters in 35 seconds. Apply to R. P. M. GREELEY, 14th and Franklin Sts., Oakland.

McKINNEY STALLION FOR SALE.

ONE OF THE GRANDEST LOOKING AND best bred McKinney stallions ever foaled is offered for sale. He is five years old, sired by the great McKinney 2:11½, dam by Dexter Prince, that sired the dam of Nora McKinney 2:12½ (trial to wagon 2:09); second dam by a son of Electioneer; third dam by McDonald Chief, sire of the dams of Tom Smith 2:13½ and Stella 2:15½. This stallion has never raced and has not been trained, but has trotted miles better than 2:30 and quarters in 35 seconds. Stands 15.2, weighs 1060 pounds, is a beautiful bay with black points and without a pimple. Is an exceptionally handsome horse, fine disposition and has marvelous endurance. No horse living has cleaner, straighter or more perfect legs. A grand prospect to train, and a sure money-maker in the stud. Would make one of the grandest roadsters in America. For further particulars address BREEDER AND SPORTSMAN, 36 Geary St., San Francisco.

New Light MILLER TRAINING CART..

20 to 35 lbs. lighter than any Pneumatic Cart on the market.

45 lbs. with spring. 40 lbs. without springs.

Low Seat, Light, Strong & Handsome Carries a 275-lb. Man.

"Strong enough to jog to on the road"
"Fits the big horses as well as the colts."
"Easier to ride in than a sulky."
The MILLER SULKY beats them all for lightness, strength and speed. See it before ordering any other.

The Lawrence-Williams Co., Cleveland, O

ADVICE TO HOG RAISERS.

Some advice has been offered to hog raisers by R. A. Craig, veterinarian of the State of Indiana, which is so valuable that it is reproduced herewith:

The main precautions against carrying disease germs into the yards are as follows:

1. Hogs from other herds, or stock shows should not be allowed to mix with the herd until they have been proven free from disease.

2. All possible ways in which the germs can be carried into the yard by people, dogs, birds, etc., should be guarded against, especially when the disease is present in the neighborhood.

3. Dipping or washing the hogs with a 2 per cent water solution of a tar disinfectant should be practiced and the animals placed in quarantine for at least three weeks in yards that do not communicate in any way with the regular yards.

4. When it is necessary for persons to enter pens where the disease is known to exist, they should clean and disinfect their shoes when leaving.

5. Persons taking care of sick hogs should use all possible precautions against the spread of the disease in their neighborhood.

The importance of clean feed, water, troughs and feeding floors must be emphasized, as it is in the feed that the germs usually enter the body. In no other place on the farm are white-wash and disinfectants so necessary as in the hog houses and pens. Pastures and lots can be kept in a more healthful condition if the hogs are taken out for a few months each year, and a forage crop sowed in the unused lots. Clean yards prevent exposure to a large number of active germs at any one time, in this way being an important help in preventing disease. Pens and pastures receiving the drainage from neighboring swine enclosures should not be used.

Some of the necessary measures in the treatment of a sick herd are as follows:

1. Disinfect the feeding floors, troughs, hog houses and their immediate surroundings daily with a water solution of a tar disinfectant (2 to 4 per cent). If this cannot be done, remove the hogs and build temporary quarters.

2. Feed a light, sloppy diet of shorts, bran, etc.

3. Do not leave water and slop in the troughs for the hogs to wallow in.

4. Copper sulphate can be dissolved in the drinking water and slop in the proportion of four ounces to the barrel.

5. The dead hogs should be burned or buried, and their bodies covered with lime.

If these precautions against the spread and perpetuation of "hog cholera" were observed, it is believed that this disease would not exist as an epidemic from year to year.

Sheep, either as a specialty or as an important adjunct of the regular farming operations, are raised in all parts of Scotland. In the farming country where the rent values are from \$5 to \$15 per acre, sheep are considered indispensable, as they not only generally give handsome returns in mutton and wool for the feed consumed and labor expended, but they also increase the fertility of the soil. The Scotch farmer values sheep very highly as soil improvers. Although use of commercial fertilizers is very general in all parts of the country, the farmer who takes possession of a worn-out farm invariably resorts to sheep feeding as the quickest and surest way of enriching his land. On the hill and mountain land sheep are grown in large numbers. With high and well-drained land the conditions in Scotland are well suited to the production of sheep, so many parasitic troubles which so often cause heavy losses among the flocks of England are almost unknown in Scotland. The climatic conditions are favorable to the growing of roots, especially turnips, which form the basis of practically all sheep feeding. The fall and winter months are generally open and permit the grazing of the turnip crop, eliminating a great deal of labor in harvesting, and saving the labor of handling the manure.

Compressed bricks of salt are now being used for cows, and all kinds of stock.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

IT MAKES NO DIFFERENCE

what particular kind of shooting you are interested in—sportsmen differ as to make of guns, advantages of various loads etc., but sooner or later most of them come to the same opinion about ammunition—that

Peters Shells and Cartridges

have all the other makes beaten in the race for quality and results. See what they have recently accomplished in the three chief departments of "the game":

RIFLE

At Sea Girt, N. J., Aug. 24-Sept. 9, LIEUT. TEWES won the Wimbledon Cup Match, the Grand Luffin & Rand Aggregate, the Seabury and N. J. Members' Matches; LIEUT. CASEY won the Inspector's Match, and LIEUT. SMITH the Reading Match—all using Peters 30 U. S. Govt. ammunition.
In the Spencer and Seabury Matches LIEUT. CASEY made a total of 20 consecutive bull's-eyes.
In the Wimbledon Match seven of the first ten places were won with Peters Cartridges.

PISTOL

The Pistol Championship of the United States, competed for Sept. 1-11, was won by J. A. DIETZ of New York, scoring 465 out of a possible 500 with Peters 22 Stevens-Pope Armory Cartridges, Standard American Target, 8 in. Bull's-eye, distance 50 yards.
At Sea Girt, N. J., Aug. 24-Sept. 9, THOMAS ANDERTON won the All-Comers, Any Revolver, and Jones Matches, and LIEUT. STEDJE the Disappearing Target Match, all with Peters Cartridges.

SHOTGUN

The Consolation Handicap at the Grand American, June 30, was won by JAS. T. ATKINSON, score 99 out of 100, using Peters Ideal Shells.
First Amateur Average at the Cincinnati Tournament, Sept. 19-21, won by R. S. RHODES, using Peters Shells.
First General Average at the Indianapolis Tournament, October 9-10, won by L. H. REID with the phenomenal score of 392 out of 400, using Peters Factory Loads.

The Leading Money-Winning Pacer of 1905

INDIANAPOLIS

The LOGICAL and the BEST MARKET For CALIFORNIA TROTTERS AND PACERS

Recent sales have clearly demonstrated that INDIANAPOLIS is the country's greatest sales centre and traffic center of the Ohio Valley section.

California horsemen, SEEKING A MARKET for their holdings, will do well to bear in mind that both SIDNEY DILLON and MCKINNEY were purchased by INDIANA BREEDERS.

INDIANAPOLIS SALES are frequented by liberal buyers not only from the MIDDLE WEST, but also by those same EASTERN BUYERS who in past years gave prestige to the sales at CLEVELAND.

EXPRESS CHARGES on carload shipments, CALIFORNIA POINTS TO INDIANAPOLIS, are less than FIFTY DOLLARS PER HEAD—a nominal expense in comparison to the increment of values OBTAINABLE AT INDIANAPOLIS.

**NEXT SALE AT
INDIANAPOLIS**

FEBRUARY 26, 27, 28, MARCH 1, 2, 3, 1906.

Horsemen, who may desire to consign stock of real merit to our great ANNUAL SPRING SALE, should advise us AT ONCE that arrangements for co-shipment with other California consignments may be made before it is too late to do so.

For full information and Terms governing consignments, etc., address QUICK

State Agricultural Society Occident Stake of 1908

TROTTING STAKE FOR FOALS OF 1905

To be Trotted at the California State Fair of 1908. Entries to Close January 1, 1906, with ALBERT LINDLEY, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1907; \$25 to be paid January 1, 1908, and \$50 thirty days before the race. The Occident Cup, of the value of \$400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six tenths; second colt, three tenths; and third colt one-tenth of the stakes. Five to enter, three to start. A horse not winning a heat in the first three shall not start for the fourth heat unless said horse shall have made a dead heat, but horses so ruled out shall have a right to share in the prize according to their rank in the summary at the close of their last heat. Otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1903 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1906.

ALBERT LINDLEY, Secretary.

BOOKS FOR STALLION OWNERS

1. Hoover's Stallion Service Record.

The most complete book for recording stallion service ever placed before breeders. Not a pocket edition. No more disputing of sires. No more mixing of dams where this book is used. There is space for entering 100 mares, giving their full breeding, description, dates of service, dates of foaling, etc., with index, complete, size 10x7 1/2. Each book is handsomely and substantially bound. \$2.00

2. The Standard Stallion Service Book.

The neatest Service Book published, containing space for entering 100 mares, giving space for full description, pedigree, date of service and refusals, date of foaling, etc., with index complete, neatly bound in leatherette, suitable for pocket use. \$1.00

3. Breeder's Note and Certificate Book and Stallion Service Book Combined.

This book contains 75 blank certificates to be given to owners of mares, certifying that said mare has been bred to a certain stallion. Also 75 notes suitable for owner of mare giving to owner of stallion on account of stallion service fee. This book is well bound, and makes a book like No. 2, after certificates and notes have been removed. \$1.00

San Francisco, Saturday, December 16, 1905

THE OCCIDENT STAKE is California's greatest trotting classic, and to win it is the greatest honor a three-year-old trotter can achieve on this coast. It is the richest stake of the year to the winners, as the entire amount is divided between the first three in the final summary. There is 60 per cent to the winner, 30 per cent to the second horse and 10 per cent to the third. This year North Star by Nutwood Wilkes, the winner, won \$2,491, Bellemont by Zombro was second and won \$1,045.50, while Princess Louise, who was third, was awarded \$348.50 or just \$248.50 more than the entrance money paid on her. It will be seen that the Occident Stake is a profitable stake to win or get money in, and the winning has led to more than one sale at big figures. The stake of 1908, which is for foals of 1905, will close for entries on January 1st, 1906, with Albert Lindley Secretary of the California State Agricultural Society. The foals of 1905 are now weaned and every owner who expects to train, sell or race his foal of this year, should see that it is entered in this stake. The amount required to make the entry is but \$10 and the payments thereafter are made yearly. The State Fairs of California are to be made greater expositions in the future than were ever held on the State Fair grounds. By 1908, when this stake is trotted, it need not surprise anyone if there are 20,000 people on the grounds, something that has never occurred at any State Fair in the past. If your colt can win the Occident Stake of 1908 he will command a big price right then and there. He will have no chance on earth to win unless he is entered as there are no substitutions in the Occident.

THE SAN JOSE RACE TRACK, which was recently purchased from the San Jose Fair Association by Mr. Hanchette, representing the corporation that has recently purchased the San Jose, Santa Clara and Alum Rock Railroad, will not be used for railroad purposes for a time at least. Budd Doble, who has his stallion Kinney Lou 2:07½ and a number of others at the San Jose track, was told by the new company's representative that the track would be kept in order for training and that no change was contemplated at present, except that a number of improvements were being considered that would make the track more popular with harness horse owners than ever. It is possible that a great agricultural fair will be given there annually if plans now under way materialize.

TAKE OFF YOUR HATS to the Los Angeles Harness Horse Association. Although the two excellent harness race meetings given by this organization this year were not financially successful, although from a racing standpoint no better meetings were ever held in any country, the Board of Directors has decided to give two meetings in 1906, one in the spring, another in the fall. Good purses will be offered and the same high class management will govern the meetings. The gentlemen composing the Los Angeles Harness Horse Association do not propose to give up because one year's gate receipts and other resources fell below the expenses. They intend to make another effort and the "Breeder and Sportsman" desires now to urge upon every breeder, owner, trainer and other person interested in harness horse affairs to do what he can to make the Los Angeles meetings of 1906 big successes. Gentlemen of the harness turf, take off your hats to the Los Angelenos. They have done and are doing everything in their power to build up harness racing in California and they deserve our unqualified and unanimous support.

MORE INTEREST THAN EVER is being taken by California breeders in harness colt stakes. The Pacific Breeders' Futurity for the foals of mares bred in 1905 closed on the 4th instant and has a larger entry list than last year, which is a splendid showing. The number of nominators is much larger, showing that the number of individuals interested in the breeding and racing of trotters and pacers is on the increase in California in spite of the fact that the circuit of harness racing is so limited. The winning of the Occident, Stanford and Breeders' Futurity Stakes this year by North Star has shown breeders that it is possible for a California three-year-old to earn a large sum without leaving the confines of his native State. If these three rich stakes continue to be well patronized in the future, they will naturally increase in value year after year and the time will surely come when a three-year-old that can defeat all of his age in the California stakes will earn \$10,000 or upwards for his owner. The full list of the nominators in the Breeders' Futurity No. 6, with the name of mares nominated and stallion bred to, will appear in our issue of next week, which will be the annual Christmas number. It will be for sale on all news stands at the usual price—ten cents.

The new long shaft, low seat McMurray Speed Cart, in two different weights—forty and forty-five pounds—will arrive at the Kenney Manufacturing Company's place of business, 531 Valencia street, San Francisco, this coming week. Buy yourself a Christmas present that you will enjoy every day in the year.

W. G. Durfee of Los Angeles has recently purchased a colt by his Onward stallion Petigru 2:10½ out of Juliet D. 2:13½, dam of Irish 2:08½, by McKinney 2:11½. This colt is well staked and gives promise of being a fast one. Mr. Durfee has three yearlings by Petigru, all of them fast. Petigru is siring speed from all kinds of mares, which is not surprising, as he is fast himself and is bred right to transmit this quality.

There are about 250 head of trotters and pacers working at the Los Angeles track, and the interest in the harness horse has not waned any in the sunny south. Horsemen there are looking forward to much sport at the matinee races of the Los Angeles Driving Club, which will be held quite often during the winter.

S. K. TREFRY'S KENNETH C. (3) 2:17

The San Francisco Wheel and Novelty Company at Sixteenth and Valencia streets has just received a shipment of beautiful 1906 model road and speed carts from the Houghton Sulkey Company. These carts are as fine as anything in the market and are growing more popular every day.

In all the races to be decided at the meetings of the Los Angeles Driving Club in the future, carts will be used instead of sulkies. At a recent meeting of this amateur organization, a proposition was advanced to require all horses starting to be driven to wagon. Owing to the fact that this would require a large outlay from the treasury of the organization, as many of the members can hardly afford to own speed wagons, it was decided that carts would be the regulation hitch in the future, or until the organization considered itself in such a financial shape that it could afford to purchase sufficient wagons to supply all entries with one.

The Trotter and Pacer says: "When Trainer Johnny Dickerson arrived home this fall with his string of campaigners, after a most successful season, some one asked him if he was going to keep the same private car to ship his horses in next year that he had used this. 'Of course,' was Dickerson's response, 'and say, that car is a mascot. It has a lucky number—999—to begin with. It was purchased first for Ed Geers by C. J. Hamlin. Geers was always lucky when he used it. We bought it from the Village Farm last spring, and this year has been the most successful we ever had. We had some vacant stalls, which Tommy Murphy used early in the season, during which time he was very fortunate. Then Lon McDonald took the vacant stalls about the middle of the season and he commenced winning right away. Lon has already chartered space in the car for next year.'

BEST RECORDS.

The racing season of 1905 now being at an end the presentation of a table of the best records of the year is in order, and it is herewith appended.

Trotters.

Two-year-olds—

A dispatch from Santa Rosa states that Thos. L. Hehir, of the well-known firm of Belden & Hehir, harness goods dealers of Santa Rosa, recently purchased from Millard Sanders the sulky that Lou Dillon drew when she made her world's record of 1:58½. The sulky is now on exhibition at the Belden & Hehir establishment in Santa Rosa and is attracting great attention from the residents of the county where Lou Dillon was bred. The sulky weighs just twenty-four pounds and one ounce, and it has been made famous by the performances of the little animal from the City of Roses. With it at Columbus, O., Lou Dillon set the first mark for a trotter below two minutes, and established a record which may never be equalled or beaten. The sulky was presented to Millard Sanders for his work with Lou Dillon. It has the name of the world's champion painted on it in gilt letters. It is also stated in the dispatch that Mr. Sanders will spend the next two months in Santa Rosa.

Good pasturage where there is no wire fencing and plenty of good box stalls can be had at the farm of Mrs. M. L. Chase, Sonoma, Cal. See advertisement.

A colt that is being greatly praised by every horseman who has seen him is the yearling colt by Monterey 2:04¼ out of Dot McKinney by McKinney 2:11¼ that James Berryman of 2220 Santa Clara avenue, Alameda, has in training. This colt is a handsome bay, good headed and with remarkable speed. He is entered in the Breeders' Futurity, Occident, Stanford and the Crowley stakes and looks like one that with ordinary luck would get a good share of the money in those important events. The Sidney and Monterey blood combined should result in a very fast colt and a game race horse, and this youngster looks as if he would fill the measure.

Colonel William S. Patten, Chief Quartermaster of the Department of California, wants horses for shipment to the Philippine islands, and asks for sealed proposals to furnish 475 cavalry horses and twenty-five artillery horses to be delivered at Seattle, Wash., or at some prominent railroad point. Proposals must be at the Quartermaster's office not later than 10 A. M. January 5, 1906.

NOTES AND NEWS.

Governor Pardee has appointed Mr. H. A. Jastro of Baker, a member of the State Board of Agriculture, vice William Johnston, deceased. Mr. Jastro is one of the leading live stock breeders and farmers of the San Joaquin Valley.

Relwood 2:21½, son of Anteeo 2:16½ and out of Lou Dillon, the dam of Lou Dillon, is now owned by David Miller of Brant, Ohio. Relwood is the sire of two standard performers.

The full list of mares nominated in Pacific Breeders' Futurity No. 6, \$7000, for foals of mares bred in 1905, will appear in our Christmas number, out next Saturday.

John Manlove, Cambridge City, Ind., who owns the sensationally fast pacing filly by Hal Dillard 2:04¾, that paced a quarter in 27¾ seconds as a two year old, has sent her to Woodland Heights Stock Farm, where she will be bred to Directly 2:03¼.

The Director General, sire of the sensational trotter Maushet 2:08½, is a trotting bred stallion all right. He is by Director 2:17, dam Winifrede by William L., second dam Princess Eloise by Mambrino King, third dam Flora Wilkes by George Wilkes fourth dam by American Star 14.

The good Colorado trotter Dewey 2:13½ by Superior 2:17½, who started the season with a record of 2:33½, made a fine campaign. In fifteen races in which he appeared he won ten, was second and third each twice and but once unplaced. His trainer, L. J. Smith, is confident that he will beat 2:10 next year.

Briquette, the bay mare by Zombro 2:11, out of Alaska by Woolsey, own brother to Sanel 2:08¾, is showing well for Joe Maguire, who is training her at Denver for S. H. Bernard. He recently drove her a half in 1:03¼ and a quarter in 30¼ seconds. This is the mare bred by Mr. M. A. Murphy and sold to Mr. Bernard for \$5000.

A writer for the Country Gentleman, in reporting the National Horse Show, speaks of the part trotting bred horses took in that function as follows: "The trotting blood showed very strongly in the various harness classes, and as a specimen of the quality, it may be said that in Class 40 there were twenty trotters, shown to runabouts and judged on conformation, style, all around action, pace, good manners, to stand without being held; and that seven of these twenty had records of 2:20 or better, a marvelous performance for such a class, and one which is not likely to be brought before the public, except in this statement. The Lady Kathryn of A. G. Vanderbilt won in this class, a sharp, snappy, alert, high-actioned mare, with perfect manners, that was a good second in this class last year, and at that time attracted my attention. Such trotting classes, those where the finished road article was in evidence, were extremely good, and it is perfectly safe to say that the stars could not be surpassed in the world, even if they could be equalled. Many American harness horses have gone to Europe, but the standard here has not been stationary, as shown in the awards at this show, and the horse that won with flying colors this year must show improvement before he can hope to do the same in 1906." In view of this unprejudiced statement it looks as though those who have long held the opinion that by a proper effort trotting bred horses could be selected which would outshow the horses of any other breeds in harness class are correct in their views.

Mr. C. W. Wright returned from his trip to New York last week and left on Thursday of this week per steamer Sonoma for Melbourne, Australia, with two fine pacing mares that he purchased in California a month or so ago. One is the phenomenally fast green mare Black Venus by Rajah, son of Sultan. She is out of Princess (a full sister to Edith 2:10 and Reno Prince 2:25) by Dexter Prince. Black Venus is sixteen hands and weighs about 1100 pounds. She is a nicely turned mare, sound as a new milled dollar, and has as much speed as any pacer ever sent to the antipodes. She is seven years old. The other mare, Lady Direct, is an own sister to the great pacer Directly 2:03¼, that holds the world's two year old record of 2:07¾ and is proving a sire of extreme speed, being by Direct 2:05¼, sire of ten in the 2:10 list, out of Mabel by Naubuc. The four year old filly Reybel by Rey Direct out of Mabel was sold at auction as a two year old for \$5000 and has been miles below 2:10 several times in her work this year. She is to be raced next season and will make a great brood mare of Mabel as a record below 2:05 is confidently expected for her. Mr. Wright undoubtedly picked up two rare bargains for export to Australia.

With few exceptions the buyers who secured the best bargains at the Fasig-Tipton sale last week were those who bought sound, good-sized animals whose speed had not been developed. The fact that such animals had no records doubtless led many would-be purchasers to believe that they had been tried and found wanting. A public sales ring is a poor place to dispose of animals that have not been raced and have not shown miles in fast time in well authenticated trials. The judgment of the majority of buyers will be found located much nearer the watch-pocket than directly beneath the hat.

Frank G. Smith of the Horse World says: The McDonald family were decidedly in evidence at the races the past season. The noted "big five" are Messrs. Wm. B. McDonald, Buffalo; Alta McDonald, Island Park; Alonzo McDonald, Readville; Dave McDonald, Pittsburg, and Al McDonald of California. A \$10,000 stake for the McDonald steppers down the Grand Circuit is now in order.

Judith, who trotted to a record of 2:25 at La Grande, Ore., last October, is an own sister of the dead Janice 2:08¾, being by William Harold 2:13¾, son of Sidney 2:19¾, out of Penella by Fallis 2:23.

Mr. A. Edstrom of Merced, Cal., has through an advertisement in the Breeder and Sportsman traded with Mr. C. A. Harrison of Victoria, B. C., an eighteen months old colt by American Hal, dam Carman by Newsboy 2:22½, second dam Sky Blue by Tom Hal, for his three year old trotting filly Zombelle by Zombro 2:11, dam Noonday Belle by Noonday, second dam Belle H. by Belmont.

A match race came off on the Alameda race track last Sunday between R. Consani's Daken D., driven by himself, and Corregghino Bros' Lulu F., driven by Tom Nuckols, the colored driver. Mr. Consani won the race in straight heats in 1:11½ and 1:12 and proved himself an excellent reinsman. The match was for \$20 a side. Mr. J. I. Sparrow, the well known coast agent for the Miller cart, acted as presiding judge and Mr. McTigue held the starters' flag. A large crowd was present to see the sport.

May King 2:20, sire of Bingen 2:06¼, by Electioneer, dam May Queen 2:20 by Norman, was sold to N. B. Parsons of Maine for \$235 at the Old Glory auction last week. May King was foaled in 1886. He once sold for a price well up in the thousands.

W. A. Clark, Jr., owner of Bon Voyage and other good harness performers, recently underwent an operation for chronic mastoiditis in New York. His condition is satisfactory at the present time.

It is announced that Nettie King 2:20¼ gave birth to a full brother of The Abbott 2:03¼ at Hillandale Farm, September 20, and was mated with Bellini 2:13¼. According to the old-age theory this youngster should be much faster than The Abbott 2:03¼.

SIDNEY DILLON

Guy Fortune 2:11½ helped maintain the reputation of the Aleyone branch of the Wilkes family as blue ribbon winners at the recent National Horse Show in Madison Square Garden. He won first prize in the class for trotting stallions four years old or over, kept for service. His sire, Guardsman 2:23½, was a son of Aleyone 2:27. The latter once won the blue ribbon over the famous Mambrino King at the National Horse Show. Guardsman 2:23½ is a full brother of Quartermaster 2:21¼. In 1891 Quartermaster was awarded first prize, \$500, at the National Horse Show in the herd class for stallions with four of their get. His competitor was the famous Mambrino King and four of his get. In 1892 Quartermaster won the \$1000 prize for best trotting stallion at the National Horse Show over Mambrino King and Haldane 2:26½. At the same show he also won first prize, \$500, in the herd class for stallions with four of their get, beating Alcantara 2:23 and the noted Village Farm stallion Chimes.

Eddie Mitchell, who was formerly with Cresceus but is now in the employ of Winans Brothers of England, writes as follows to the American Horse Breeder: "I arrived here safely from the continent with Alta Axworthy, Wig Wag and Katherine A., after a very successful year. We like Alta very much. She is a great mare for our kind of racing as she can go over any kind of track and in any weather. She has only made two breaks for me this year. She has trotted faster than any four year old that ever came to Europe. The last time she started she gave Contralto 30 meters and beat her. Our stable won thirteen races and a little over \$15,000. In her long distance races Alta wore only eight-ounce plain shoes in front, no toe weights, five-ounce shoes behind, knee boots and shin boots. When she won the championship of Europe she was handicapped in the final heat by the breaking of her knee boot suspenders. This let the boots drop down around her ankles and I thought every second she would leave her feet as the boots were making a terrible noise in the mud. But she stayed on a trot and won the heat. Mr. Winans has not decided yet whether he will race next year in America or Austria. Alta can beat 2:06 right now on a mile track."

An eastern exchange remarks: A religious newspaper has an advertisement calling for "a good horse to do the work of a country minister." It is to be hoped that the horse will be forthcoming and able to carry on the ministerial duties.

In the Chicago horse market the receipts of horses for the first ten months of this year totaled 113,343, against 95,509 arrivals for the corresponding period last year. Local consumption for the ten months in Chicago was double the volume for the same period of 1904. At a recent auction sale in Chicago 15 of the 70 horses sold had been worked for eight of ten years and yet they realized \$210 each. Horses that had been worked for six months to two years, some of which were bought at an average of \$325 each, were sold for \$280 apiece.

The fast brown filly Rosabel 2:24¼ by Adbeil, owned by W. B. Chisholm of Cleveland and campaigned the past season by Ben Kenney, was found dead in her stall at the Glenville track last week. Rosabel had shown miles in 2:10½ in her work the past season.

Texas Rooker 2:05¼ will be raced in the free-for-alls on the Ice in Canada by Dan McEwan.

W. J. Andrews thinks Ethel's Pride 2:06¾ will take a record of 2:04 or better next season.

Knap McCarthy has decided to postpone his California trip and will winter Norman B. 2:06¼ and the rest of his stable at the Terre Haute, Ind., track.

Ethelwyn, dam of Ethel's Pride 2:06¾, is in foal to Admiral Dewey 2:04¾, son of Bingen 2:06¼ and Nancy Hanks 2:04.

The futurity winner Miss Adbell 2:09¾, will probably not be raced again until 1907.

John Shepard of Boston is driving the Transylvania winner Ethel's Pride 2:06¾, to pole with Promise 2:10.

Concha, daughter of A. W. Richmond, is now entitled to a place in the Great Brood Mare table. She is the dam of the McKinney mare Idylwild 2:17¾ and the pacing mare Amber 2:25 by Conifer. Amber took her record at the recent Los Angeles meeting in a trial against time.

The Davisville road drivers had an afternoon of racing on the 2d instant on the half mile track at Campbell Bros. farm west of that town. The first race, in which there were three starters, was won by Campbell's Sadle M., a trotter, with Orin Wright's Lottie Wilkes second and Del Grileve's Whoa-haw-Dick third. The pacing event was won by F. P. Smith's Irish Lassie, she beating out Orin Wright's Mono Rose a few inches in each heat. A race for saddle horses and a broncho bucking exhibition finished the program. A large crowd was present.

Millard Sanders, who intends opening a public training stable at Pleasanton, states that before he left the East he made a proposition to Mr. Billings, owner of Lou Dillon 1:58½, that he would take the mare next year, train her and try to lower her record, which he firmly believes he can do. In case he should not succeed in his endeavor he would not charge a cent for his services as trainer. It has been published in the Eastern papers that Lou Dillon would be bred to John A. McKerron in 1906, as Mr. Billings would be in Europe all the year.

Frank Irvington 2:23½ is the premier stallion at the Springside Stock Farm, Lima, Ohio. He is by Nutwood Wilkes 2:16½, out of Nettie G. by Anteeo 2:16½, and is owned by Dallas J. Cable, a well known attorney of Lima. He was bred by Martin Carter of Irvington, Cal.

At an auction sale recently held in Attica, Ind., four of the get of Dan Patch 1:55¼ brought \$860, \$760, \$550 and \$450, respectively, the two highest priced being bred like Ed Patch 2:08¾.

The Monk 2:05¾ and Solon Grattan 2:11¼ have been matched for \$500 for the Speedway championship of Chicago, the race to be decided on the snow.

Tommy Waugh, who cared for Lou Dillon 1:58½ when she was trotting her fastest miles, is now in charge of Cresceus 2:02¼. Tommy now holds a world's record. He is the only man who has taken care of the champion trotting mare and the champion trotting stallion.

Owing to the infirmities of extreme old age, the stallion Epaulet 2:19 was mercifully put to death at the Grandview Farm of his late owner, Robert Steel, at Doylestown, Pa., near Philadelphia, a few weeks ago. Epaulet was foaled in 1880 and was bred by R. S. Veech at Indian Hill Farm, St. Matthews, near Louisville, Ky., and was by Auditor, son of Rysdyk's Hambletonian. He raced successfully before going into the stud and is a fairly successful sire, his standard list comprising thirty-six standard performers, all but three of which are trotters. The best of these was that great race mare Georgena 2:07½, winner of the Charter Oak \$10,000 stake in 1900 and other important events. Georgena was out of Ida Howe by Whipple's Hambletonian, a mare bred by the late Captain Ben E. Harris of San Francisco, and sold by him for \$10,000.

Mary Lou 2:17, dam of Kinney Lou 2:07¾, will be bred to Chimes next season.

LIVESTOCK SANITARY ASSOCIATION.

"The death rate among children has been reduced 25 per cent in Los Angeles and adjoining counties by the rigid enforcement of the southern ordinances covering the inspection of milk." This statement was made by Dr. W. E. D. Morrison, Assistant State Veterinarian, recently at the second annual meeting of the California Livestock Sanitary Association at the Palace Hotel.

The association is made up of the veterinary officials of the various counties throughout the State and its object is to assist in stamping out contagious diseases among cattle. Much of the time of the meeting was taken up with a discussion of anthrax among cattle and scab among sheep.

Dr. Morrison, who read an interesting paper on "Duties of County Livestock Inspectors and the Best Methods of Carrying on the Work," took a prominent part in the discussion of the various papers. He recommended a strict law regarding milk inspection and the immediate cancellation of the licenses of men who violate its provisions. The law he recommends prohibits the sale of milk by a dairyman unless his cows have been tested and unless the milk comes up to the required standard. In the south, he said, the custom was to impose a fine for the first infraction of the law and to revoke the license upon the second offense.

He suggested a uniform ordinance throughout the State and believes its influence would be felt immediately. He attacked the present sheep law, under which shepherds, and not qualified veterinarians, may pass upon the condition of diseased sheep.

Dr. Work of Berkeley reported that the Oakland authorities maintain a strict watch over both milk and the dairies. Berkeley, he said, was not so strict, many diseased cows being kept in dairies there.

Retiring President Megowan dwelt particularly in his address to the members on the necessity of the inspection of milk, as it was a disseminator of disease. He said the question of tuberculosis among cattle was a vital one and that the chief duty of the association was to prevent its spread.

Dr. F. N. Sawyer, county live stock inspector of Kern county, spoke on "Tick Extermination." He said if cattle were dipped systematically at monthly intervals for one year in suitable oil it would discourage the ticks. He said the oil found in the Kern fields was too heavy. He also recommended keeping cattle off infected fields for a year, cultivating the land in the meantime or pasturing sheep there.

Dr. R. A. Archibald, city veterinarian of Oakland, spoke on "The Use and Abuse of Anthrax Vaccines." He held the vaccines in use at present are neither scientific nor efficient, and said the existing conditions are deplorable. He held the sale should be controlled by law. At present the vaccine is chiefly useless, as the makers have to send it out mild in order that it will not kill.

Dr. A. Ward spoke of the "Veterinarian in the Laboratory." He said the State Laboratory at Berkeley extended its privileges free to veterinarians and the officials were glad to assist their professional brethren. The officials are always ready to arbitrate in disputes regarding the quarantine of cattle, especially in anthrax.

There was a discussion of the feed question and it was agreed conditions were bad. The recent rains injured the old feed on hand, while the frosts have retarded the growth of the young grass.

The new officers of the association are:

President, Dr. R. L. Archibald, City Veterinarian, Oakland; secretary and treasurer, Dr. Charles Keane, State Veterinarian; executive committee, Dr. F. N. Sawyer, Dr. George Faulkner, Dr. W. E. D. Morrison.

HERSEY AND DAN PATCH.

"There was quite a lot of criticism over my selecting a practically unknown trainer to succeed McHenry," said Mr. Savage, owner of Dan Patch. Recently, "and I was as much gratified with Hersey's success as with Dan's. I had a great deal of faith in Mr. Hersey, naturally so or I would not have given full control of Dan Patch to him. He is a college man, and I believe brains and education will tell in training a horse as well as in other lines of business endeavor. He has earned all his success by hard and faithful work, intelligent application of his knowledge of horses and particularly his study of the individual he has to train.

"There are other trainers who would have made more speed in a shorter time—and Hersey undoubtedly could have if he so wished—but they would have had nothing to show when I wanted it, in the fall. He went very easy with Dan Patch in the spring, so much so that not a few called my attention to it and also to the fact that the horses at Louisville and Memphis were beating 2:10. Now the first time Dan appeared before the public this year was on Labor Day and before seventy thousand people he beat two minutes, and I do not believe a horse ever went so many good miles as Dan since that time up to his mile in 1:58 at Memphis. And more than this, he has never been a disappointing mile in his life. He is always ready on any day and over any kind of a track. Dan Patch is back home now and he came back weighing twenty-five pounds more than he did when he went away."

ANSWERS TO CORRESPONDENTS.

G. H. H., Semitropic.—Prince Hoadley, bay horse, foaled 1900, is by imported Calvados, dam Nereid by imported Saxon, second dam Highland Lassie by Blair Athol, third dam Rupee by The Nabob.

J. F. R., Oakley, Cal.—Your mare is not eligible to registration.

INFLUENCE OF TEMPERAMENT.

In going through the mass of statistics and special pleadings of the various hobbyists in the turf papers, our old friend, "the breeding problem," gets more than the usual share of attention. It has been said that a clever lawyer can revamp the evidence in any given case and prove anything he desires—that figures can be juggled to prove anything; but in no case is this truer than in deductions made on "the breeding problem" as applied to harness horses.

The statistics of the turf can be arranged to give consolation to the craziest proposition that can be conceived. Professor Redfield's theory that a horse must either be old or much developed to produce speed can be supported by a host of noted examples, but he states himself that his rule, to be correct, must admit of no exceptions; hence it falls flat at once, for Hambletonian had no standard record. He sired Alexander's Abdallah when he was three years old, and he was one of his greatest sons. Surely this is a notable exception. Alexander's Abdallah had no standard record, and he was 11 years old when he begot his best sons, Almont and Belmont, and neither of these had standard records.

While some of our greatest sires and dams were horses that have been trained and raced, many of them to low records, yet the fact remains that some of our greatest brood mares never wore harness. In this connection Dr. J. W. Neal seems to have struck the matter nearly right, to my way of thinking. He says:

"My experience and observation teach me that, while blood lines and manifested speed are, beyond question, fundamentals in harness speed breeding, the real secret of success, after we have these things as a basis upon which to build, is individual selection and mating.

"In horse breeding 'like produces like,' with very many and very marked variations. In fact, the law of like producing like in a Biblical sense means only that a certain species will reproduce that species, the building up of certain traits, qualities, and characteristics in certain species being the results of certain lines of inbreeding and individual selection, the fundamental principle in line breeding and specific characteristic production and perfection being the condensation of a certain strain of blood.

"I take it for granted that practically all harness speed breeders of the present day recognize the reasonableness of relying on so-called trotting blood in the production of harness speed, and this leads up to the point of individual selection and mating of trotting-bred sires and dams. When harness-bred speed breeding shall have been carried on for centuries, as has running-horse breeding, there will still be failures often when animals of the choicest breeding are mated, just as now happens often in running-horse breeding, unless the strictest attention is given to proper individual selection.

"Horses, like humans, have temperamental characteristics, and with horses, as with humans, males and females of the same temperament do not cross well in reproduction. In harness speed breeding, then, trotting blood comes first, and individual mating second as elements of success, and I am not sure but that this should be reversed. In mating stallions and mares of strong breeding, the innate and temperamental forces of the one are either augmented or neutralized by the innate and temperamental forces of the other, and the resultant offspring is consequently often greater than either or equal to neither.

"Nearly all stallions and mares are either positive or negative in temperament and disposition—aggressive or passive—and, in nature, mating 'two of a kind,' absolutely of a kind, means nothing as a product. One had as well try to get an electric current from the joining together of the negative poles of two batteries as to expect a race horse from the mating of a stallion and mare each possessing the same positive, aggressive temperamental characteristics, or the reverse—i. e., both negative—for life itself, vital force, is electricity. Very largely stallions and mares are like either pole of an electric battery—are either positive or negative—and it is a well-known law in physics that either two positives or two negatives produce a negative—nothing.

"In undertaking to breed harness speed the first essential, of course, is to select stallions and mares of approved harness speed producing blood lines. The next essential element of success is a close analytical study of mental qualities and characteristics. If a mare is bred right, is 'snappy,' nervous, 'high strung,' and has a tendency to be 'flighty,' she is a 'good prospect' as a speed producer, provided she is mated with a well-bred, rather phlegmatic, courageous, level-headed, non-excitable, 'deaconish,' 'clock-headed' stallion, who displays his real metal only when vigorously 'shaken up.'

Sluggish, indifferently disposed mares, however well bred, will produce speed only when bred to stallions of the tense texture, 'high-keyed,' dashing, alert, 'breezy-acting' sort—the 'hot-blooded' kind. A study of the individual characteristics along these lines will compensate any speed breeder, and what is here said is said more for the purpose of stimulating thought along these lines than with a view of imparting 'valuable information.'

"Many men are of many minds' on the subject of harness speed breeding, as well as on the subjects of religion, politics, and planting corn, and hence opinions probably will always differ, more or less, as to the best combinations of blood as a harness speed-producing element. Figures are wonderfully reliable things, even though it may not be absolutely true that

they 'never lie.' Figures, trotting-horse statistics, very plainly say that in the main every additional cross of Hambletonian blood in a trotting pedigree increases the chances for trotting speed, and it clearly is more than a mere accident that Dan Patch 1:56½, Lou Dillon 1:58½, Major Delmar 1:59¾, and Cresceus 1:59¾, all trace to Hambletonian on both sides—most of them several times.

"Yet Hambletonian would not have proven the prince of all speed progenitors had he not come in contact with the other pole of the battery himself. He was a horse of very positive, yet phlegmatic, temperamental qualities, and in American Star and Clay mares he encountered the opposite pole—somewhat figuratively speaking—and the greatest trotters and speed progenitors of that day and generation resulted.

"From that day down to the present time, stallions of distinctly marked character, sedate, mentally strong, not over excitable, 'clock-headed,' rather phlegmatic temperamental make-up, have proven the most uniform and successful speed sires. George Wilkes, Electioneer, Onward, Wilkes, McKinney, Sidney, Nutwood, etc., all have, or had, the same temperamental make-up largely, while, with scarcely an exception, great speed-producing brood mares have what we call in the human family, nervous temperaments, are quick, nery, snappy, alert, and 'off like a flash.'"—Chicago Inter-Ocean.

INDIANAPOLIS AS A MARKET FOR CALIFORNIA HORSES.

With the discontinuance of the Cleveland sales, California horsemen naturally look to Indianapolis as the distributing point for such horses as they may desire to market in the East. The Indiana metropolis is admirably suited to California shipments, not only on account of its geographical location but because it has in recent years attained the position of the leading sales center in the Middle West and recent sales at that point have demonstrated beyond question that racing prospects of real merit and the better class of breeding stock will bring better values at Indianapolis than anywhere in the East. The Middle West has been blessed with a number of years of transcendent prosperity and the very great majority of the more pretentious breeding farms are now located in the Ohio Valley section and nearly all of the Grand Circuit stables are sent out from the same section—and of this section Indianapolis is the great traffic center, and when it is remembered that both McKinney and Sidney Dillon found new homes at Indianapolis, California horsemen should readily see therein the sign of the times. At the last Indianapolis sale Mr. James Butler of East View Farm, New York, offered a consignment of upwards of forty head, and so satisfactory were the results obtained that Mr. Butler has announced his intention of making a second consignment to that point at the spring sale the first week in March. At the same time, the Kentucky breeders almost to a man favor Indianapolis as their best sales point and are sending all of their best stock to the Indianapolis sales. No market offers better sale facilities than Indianapolis, every accommodation being unsurpassed, and under the conduct of such a firm as the Blair-Baker Horse Company, Indianapolis will continue to grow in the estimation of thoughtful horsemen as the best of all Eastern sale points. Mr. Frank P. Kenney, who is known to every California horseman, is in active management of the sale affairs of the Blair-Baker Horse Company, which is a sufficient guarantee that every consignment shipped to Indianapolis will receive the same careful and attentive service necessary to the attainment of the best results. Mr. Kenney will be pleased to correspond with Californians who are contemplating making an Eastern consignment this spring. The coming spring sale of the Blair-Baker Horse Company is scheduled for February 26th to March 3rd.

PROFESSIONAL DRIVERS' ASSOCIATION.

At the annual meeting of this association, held in New York last month, a vote of the eighty members was taken as to whether steps should be taken to abolish the three-in-five system. Seventy-three members were in favor of the three-in-five system, providing races were completed at the end of five heats.

The association voted to petition the National and American Trotting Associations to prohibit negroes driving over association tracks in public races with white men.

A new board of directors was elected as follows: W. K. Smith, C. W. Merkle, R. C. Bever, W. L. Snow, J. I. McAnany, James Carpenter, J. B. Green, F. E. Davis, W. R. Cox, Frank Hedrick, W. S. Garrison, W. B. McDonald and Joseph McGraw. The first seven of these gentlemen were re-elected. The retiring directors were: E. F. Geers, J. Y. Gatecomb, A. P. McDonald, A. L. Thomas, T. L. Arthur, A. M. Rathbun, C. P. Doble and Eben Clark.

Benefits for injuries were paid this year to A. H. Tyson, D. H. Kelly, F. W. Grothe, Fred Jamison, Jos. Scrill and M. E. Stid.

An amusing incident which occurred during the sale of Cresceus showed that he was as much opposed to leaving the United States as the American breeders were to having him go. When Cresceus was led before the auction box, the spectators were so numerous that the police had to form a ring in which the horse could be exhibited. Behind one of the policemen was H. Schleissenger, the well known foreign buyer. Just what grudge Cresceus had against Mr. Schleissenger was not apparent, but every time the horse was led past that gentleman, he would toss his head and endeavor to lunge at him.

Jackson's Napa Soda cleanses the stomach and renders the eye clear.

COST OF ROADS.

A New York correspondent of the Country Gentleman writing of the \$50,000,000 voted by New York State for road improvement says:

It seems to be accepted that the State has ratified the good roads amendment; so I have been looking into the work as carried on in Erie County without any special appropriation for extension made last winter, thanks to the Governor's veto of the bill to cut down the expenses budget. In that case there was plainly nothing to do but look after existing roads, of which there are fifty-four miles in the county, under the supervision of the county engineer, so that all are looked after uniformly and kept in order by contract.

It is probable that the really unsolved problem in the maintenance of macadamized roads is the dust. Even after the stone of which the body of the road is composed is reduced to powder by wearing, there is still a considerable wearing property left, which would be made the most of but for the fact that it becomes light by drying and blows away, thus causing the best road of the sort to waste away constantly through the summer, and at quite a considerable rate, if the travel is heavy.

There has been some study of the resistance to this waste and the rendering of such roads more passable in dry weather by sprinkling, but County Engineer Diehl declares that it is out of the question. A team with sprinkler can cover but a short distance, and there is need of considerable apparatus, including a gas engine and pump where there is no hydrant service with pressure. An effort was made some time ago to sprinkle a piece of such road south of Buffalo, but it was found that the road dried up so fast that it was actually impossible for the driver of the sprinkler on his return trip to find where he started in.

While such a road slowly wastes away, it grows more solid with use, and if kept a proper thickness it will give the best satisfaction possible in a road that is still something of a nuisance in dry weather, both to traveler and resident, from the clouds of dust raised, especially by the flying automobile. I am convinced that the common idea of a "good road" is still in need of considerable modification, and that the problem is not solved yet by any means. I am not trying to throw cold water on the plan, much as the road needs it, but it can do no harm to show what is to be expected of the stone road as at present built; otherwise we are going to be much disappointed. The average advocate of these roads has an idea that all that is needed is to build them. He will soon discover his mistake.

Again as to the first cost of such roads; I read the other day that it had been shown that \$200 a mile was enough to lay out on them at the outset. If that is true, there is a big chance for missionary work in this direction. While it is true that something could be done with that amount where the roadbed was solid rock to begin with, such a condition is too uncommon to be worth considering, though there is a big difference in natural foundations. Erie County is laying a six-inch macadam, and the engineer insists that there should be twice that thickness near the large towns, where travel is heavy. Otherwise, there is danger of its breaking up in extremely wet times.

Now as to maintenance. It is found that this costs about \$50 a mile every year in the most favorable localities, where the natural bottom is good, with little wearing travel and not much hillside washing. Near Buffalo, where the travel is heavy, the cost is about \$1,000 a mile every year, with an average of about \$268 a mile for the whole amount of new state road in the county. When we consider this running cost, we are little less than frightened, unless we are contractors after that work of unthinking citizens, with the idea that the resources of the state are limitless. At even \$250 a mile for repairs, it would take the interest at 5 per cent on the entire \$50,000,000 to maintain 10,000 miles of road; so that when the roads are built, the thing to do is to put up another vast sum for keeping them, as the most foolishly expensive thing imaginable would be to build these roads and then leave them to go to pieces again.

If the cost of building these roads to be cut down to anything like \$200 a mile, something other than broken stone must be used, for it is found here that it takes 2,800 yards of it to build a mile, and that it costs \$1.50 a yard to get the material to the spot, and we have only a six-inch depth at that. I am of the opinion that there will be some better plan for these roads devised some day, for to build them out of a mostly softish limestone, to grind to pieces and fly about the vehicles and choke the people and vegetation on the leeward side of the road does not seem to be much of a triumph of highway engineering. Still, the thing to do, I suppose, is to make the trial and learn by our mistakes as well as by our successes. We certainly need better roads.

A feature of the Mexican demand in the American horse market has of late been the inquiry for rather small pairs of trotters, the male, nicely gaited and with some speed. This demand has sprung up lately on account of the most excellent service rendered by some such horses exported on private account last fall. It was proved that such pairs of small trotters could cover great distances without fatigue and keep on at it, besides being easy keepers, prompt, gentle fearless drivers and not too expensive. It is considered probable that many pairs of these trotters will go to Mexico this season.

Secretary Horace Wilson says the season of 1905 has been the most prosperous financially in the entire history of the Kentucky Trotting Horse Breeders' Association.

COMPLIMENT TO THE MORGANS.

There has never been a time since the breed became a fixture that the Morgan horse has been without his special pleader. In fact, there has usually been many more than one such advocate. Some of them have gone beyond the bounds of all reason in their enthusiasm. But that can be pardoned, for they were upholding the claims of a line of blood that has done more, perhaps, in proportion to its opportunities than any other that has been used in forming the breed now known as the trotting horse of America. Authorities continue to differ as to the paternity of Justin Morgan, founder of the tribe. But whatever it may have been there is one crowning fact in connection with him and that is that whatever his ancestry Justin Morgan, like Hambletonian 10 and Mambrino Chief 11, was one of the most wonderful horses of history.

What the Morgan tribe might have accomplished without the aid of the blood of Hambletonian and Mambrino Chief is a matter for speculation only. What it has helped to do is of record. If one were to make a list of the 2:10 trotters and the 2:05 pacers that carry a part of the blood of the Morgans he would find it to be a most formidable one. And he would find that it carried the names of a host of great race horses. And as the list of great race horses that inherit Morgan blood increases one can but feel that old Justin Morgan was a horse immensely above the ordinary.

Fortunately, while there has been no widespread effort to maintain the breed in its purity, our trotting horse breeders, for one reason or another, have used a great deal of the blood, in many cases to great advantage. What would have been done without it can never be told, but if there is any doubt as to what has been done with it, that doubt will be removed by reference to the list of fast harness performers.

In this connection mention of the work of Joseph Battell, in the compilation and publication of the history of the Morgan horse, should not be omitted. Mr. Battell's work was almost entirely a labor of love and enthusiasm. Fortunately for him and for horse history, he is a gentleman of means and he went about his task in no niggardly fashion. The result, so far, is one volume, and I understand another is about to be issued, filled from cover to cover with information of immense value, nearly all of it accurate, and which but for him might never have been at the disposal of the student of breeding.

The Morgan horse has his place in trotting horse history, a place that he attained through sheer force of merit, and while he may have been over-praised by certain of our good friends, there is no denying the fact that he has proved himself far better than his one-time opponents would have had us believe he was. In these days of practical horsemen there is less tribe worship than formerly obtained. But the Morgans, like all others of merit, have come to their own. Their place in history is as permanent as it is eminent.—Grattan, in Kentucky Stock Farm

NEW YORK DRIVING CLUB REORGANIZED.

The New York Driving Club, or the former organization of amateur horsemen, with headquarters at the Empire City track, went out of existence November 21st, at a meeting held at the Victoria Hotel, according to the Telegraph. About fifty horsemen attended the gathering upon the invitation of President Charles C. Lloyd, and while the press was excluded by the latter's orders, yet enough leaked out to show that a very stormy session was held. Dr. H. S. Gill, president of the Road Drivers' Association, was present with several of the leading members, and it was mainly through his efforts that the name at least was preserved.

After calling the meeting to order Mr. Lloyd announced that the New York Driving Club was no more. He explained that the original club had only eleven members, who were interested in the purchase of the Yonkers track, but those now having disposed of their holdings to James Butler, the organization is now gone out of existence. He said that Mr. Butler has now decided not to allow the use of his track and the grounds to the horsemen, and moved that the meeting be adjourned. The horsemen, however, refused to carry the motion, and upon the advice of Dr. Gill, followed with a strong speech by W. J. Clark, decided to preserve the name of the "New York Driving Club." Upon a second motion a committee of nine were chosen to look for a track where regular matinees can be held during the summer season.

Among those present was Alfred Reeves, secretary and treasurer of the two amateur associations for six years until last spring, but who, upon the urgent request of the horsemen, again accepted his former position, much to the satisfaction of the members.

Several tracks in the vicinity of New York were suggested, but the most available appears to be the good half mile oval at Orangeburg, sixteen miles from the city.

John L. Dodge, former president of the Road Drivers and owner of the track, told the horsemen present that they could use the track, stalls and clubhouse one day each week absolutely free of charge. There are over 200 comfortable stalls, with all the latest improvements, two artesian wells, and the clubhouse has thirty rooms to accommodate horsemen in case they desire to spend the night there.

Groups of horsemen were seen discussing the result of the meeting and almost all appeared glad for the turn the matter took. They now believe that the practically reorganized club, under the direct management of active horsemen will draw more members to the matinees and bring it to its former high standing.

Jackson's Napa Soda untangles the feet.

THE SALE OF CRESCUS.

"Onlooker" writes to the American Horse Breeder the following interesting gossip about the sale of Cresceus:

Before the sale of Cresceus there was much speculation indulged in as to the probable price that he would bring; guesses ranged all the way from \$7,000 to \$75,000. There were just two bids on him—the first at \$20,000, and it took Auctioneer Bain considerable time to find the man who made the offer, so quietly did he speak, and then Mr. Savage's bid of \$21,000, at which figure he was knocked down to the Minneapolis horseman.

Doubtless the fact that Cresceus has but five in the list, and none of them notable, though we believe the majority of his get are but yearlings and two year olds, and that his future earning capacity depends entirely on his stud career, operated to keep down the price on him, and doubtless the odium attached to the Wichita scandal had its effect, too.

Probably two or three years ago he would have brought at least three times what he sold for last week. We are informed on reliable authority that Ketcham refused an offer of \$105,000 for him, made by a Winnipeg syndicate at the winter meeting at Ottawa in February, 1904.

That Cresceus is the greatest trotter, taking him all in all, that the world has ever seen, will, we think, be acknowledged by every candid horseman. As to his success or non-success in the stud it is, of course, too early to declare positively one way or the other, but it is not too early to say that up to the present his get have not made good the expectation of him as a sire, and there is no question that he has been bred to some of the best mares in the country. It is not reasonable to suppose that the colts sired by him during his first seasons in the stud, after such strenuous campaigns as he went through, will prove his best. We shall look for his later foals to be better. It is altogether likely that he will sire some, perhaps many, good trotters, and, perhaps, too, some great trotters, but it must be conceded that "perhaps" implies a future contingency, a matter of speculation. Horsemen are getting more critical and exacting every year, and therefore more reluctant to put down their coin for "may bes." Their touchstone is "show me," and especially for a sire to head a stud, particularly when to procure such involves the expenditure of a large sum of money.

Mr. Savage will give Cresceus the best of opportunities to demonstrate his ability as a sire, for he will be well advertised, and Mr. Savage does not believe in excessive stud service for a horse. He will limit him to not more than 60 mares the season. Of course Cresceus is worth more to Mr. Savage than to any other man, for in securing him he has got a champion trotter, the most famous in the history of the light-harness horse, as a stable companion to the champion pacer, Dan Patch, and as an advertisement for his products the pair will be a great card.

WAS JOHN NELSON'S DAM A MORGAN?

A writer in the Newark, N. J., Call says: Mr. Alfred A. Snyder, who died two weeks ago in Montclair, once owned, jointly with his father, the trotting sire John Nelson, for whose correct breeding very persistent search has been made by historians of the American trotting horse. John Nelson was foaled in 1851, and his breeding has been accepted—as by Imp. Trustee—except that his dam is in doubt. The Snyders came into possession of the horse in 1855. He was at that time in training on Long Island in the hands of John Nelson, from whom he took his name. Mr. Snyder paid \$400 for a half interest in the horse. The firm owned the horse until the spring of 1858, and then sold him to Horace F. Jones, who kept a stable in Mercer street, near Prince, in New York. While the Snyders owned him he showed a mile in 2:36. Mr. Jones returned the horse to John Nelson for further training, and during 1859 sold the horse to California parties. Mr. Alfred Snyder stated to the writer that the dam of John Nelson was not by Abdullah, as generally credited, but by one of the Vermont Morgans. He said that he had frequently challenged anyone to prove that John Nelson's dam was the Redmond mare. The horse, he said, was only four years old when he came into his possession and his dam was well known, but in the lapse of years he had forgotten which of the Vermont Morgans was her sire. He was firm, however, in his declaration that John Nelson's dam was a Morgan, and there never was the slightest question about it where the horse was known.

Mr. Snyder's claim that the dam of John Nelson was a Vermont Morgan is backed by Mr. Newell of New Brunswick, where the horse was raised. When Mr. Snyder sold the horse he received \$1,800 for him. Mr. Snyder said that John Nelson was a horse of commanding presence, matchless for beauty and conformation. There were few horses, he said, that could compare with him in style and general finish. In 1855 Mr. Halsey Snyder, father of Alfred Snyder, bought a mare that was in foal to John Nelson, and the filly that was foaled was the first of John Nelson's produce. This filly was named Alice, and was long driven on the road in this vicinity. Alice was bred to a son of Volunteer, and the result was a colt which went by the name of Good Templar. He could trot in 2:40, and was a great roadster. He went to a stock farm in Colorado. John Nelson was a success in California. Besides having four trotters to his credit he sired the dam of Albert W. 2:20, Bonanza 2:29½, Arol 2:24, Hazel 2:28, Blanche 2:25½, Sister V. 2:18½, and Valentin 2:25. His immediate produce were Aurora 2:27, Governor Stanford 2:27½, Nemo 2:30 and Nerea 2:23½.

Prodigal, owned by Senator Bailey of Texas, now has sixty-five standard performers from 2:08 to 2:30.

THOROUGHBRED DEPARTMENT.

By RALPH H. TOZER.

There was a shift of the racing scene to "fair Ingleside" last Monday, and as the public believes that "variety is the spice of life," the change was welcomed by a large crowd—this notwithstanding the opening day's program was featureless. But one favorite got home in front—the Keene Bros.' San Primo—in consequence of which the gambler won and the gentleman lost. However, the win of Yo San in the third event carded must have cost the pencilers a goodly sum, for several "in the know" made clever "clean-ups." Jockey Walter Adams got the St. Blaise mare off in front and let her set the pace, which was not so hot that she did not have a bit left to stall off the rush of Gossiper and Escamado at the wind-up. That Gossiper was best most persons believe, for she got off rather poorly, but I am of the opinion that Yo San is a better mare than she is given credit for being and will prove it ere long, also that Jockey Adams is a pilot vastly underrated in his home city. On the Canadian circuit, however, where he has ridden for several years, Adams is thought to have no superior, and he has also "made good" at Bennings (Washington) and at Union track, St. Louis. The extra fast win of Neva Lee, track considered on the opening day at Ingleside, shows that the big sister to Scarborough is of stake caliber. She made such horses as Corn Blossom, Beau Ormonde and Judge look like \$300 selling platers. I well remember when this filly was disposed of at the Winters sale for something less than \$500, and how mad Mr. W. got at the failure of horsemen to bid something within reason for the stock offered.

The Ingleside track is not a "fast" course these days, and I much doubt the ability of anyone to render it "fast" ever again. Those horses who run best over a heavy track will do splendidly at Ingleside.

The dispersal of the great Rancho del Paso Stud looks to me very much like a "weeding-out" sale, for it will be noted that Watercress and all the other stallions (and mares) that have shown their worth will find their way to Elmendorf, J. B. Haggin's Kentucky principality. The removal of this immense lot of horses from California will be beneficial to the Golden State breeders and doubtless result in better prices for Golden State yearlings and an increase in the number of thoroughbred horses, bred in the State by those men who remain in the breeding business. Rancho del Paso, with its hundreds of horses and large numbers not sent to the sales at the East because of injuries received or the belief that they were not "fashionably bred" enough to command good prices, were turned over to horsemen here with whom Superintendent John Mackey was friendly, and these youngsters were secured on such easy terms that it was not necessary for men to go to the sales and pay "red money" for their gallopers. Therefore but few took any chance, in a financial way, and if the horses secured on such easy terms proved worthless, there were always others to be had again on almost the turfman's own terms. Now all this will be changed, and if a man wants to remain in

"the game" he will have to "take a chance" at least, and the dispersal of Rancho del Paso Stud will put a lot of buyers on the market, and with competition will come considerable increase in the prices for thoroughbred horses in this part of the world. Therefore, as remarked before, the dispersal of Rancho del Paso Stud will be beneficial to California breeders.

It was rather surprising to me to see Thomas H. Williams buying yearlings at the Burns & Waterhouse sale, because he has expressed himself as being adverse to racing thoroughbreds when in the "vealy" state. Perhaps he will not send his young racers to the races until August or September, thus making his past contention good. It was evident that larger prices would have been realized for the B. & W. youngsters had not Mr. Williams been such a prominent purchaser. In the first place, suspicious persons might have thought the jockey club president knew the real good ones in the sale, and in the next, knew they would have to "loosen up" a lot if they outbid the head of racing affairs here.

Rubric, Henry McDaniel's Mirthful colt, is the speed marvel of the season at Los Angeles thus far. Last Monday he ran seven furlongs in 1:26½, winning eased up, and good judges believe he could have gone the route in about 1:25½. Jockey Buchanan is much in evidence at Ascot these days, and a new-comer, H. Moore, is also attracting much attention by his riding. Now that W. Miller has arrived, there should be considerable rivalry between this boy and Buchanan.

Bearcatcher broke the mile race record of the Pacific slope last Saturday when he went the distance in 1:38½ with 117 pounds up, winning with a bit to spare after getting away none too well. McBride let the St. George colt get well on his stride before he let him down, and though Princess Titania set a heart-breaking pace the first half and clearly had San Nicholas beaten (the black horse had run six furlongs the day before in 1:12 flat with 118 pounds up), "the bear" was well in front three furlongs from home, and won with ease in 1:38½. "You will notice that I'm tolerable gray for a young man," said Garnett Ferguson after he had got through receiving congratulations over Bearcatcher's victory, "and nearly every gray hair was placed there by 'the Bear,' as they call him. He has had catarrhal fever, lung fever and several other kinds of fever, bad feet and everything that horses are heir to, and last summer he broke down flat on me when just breezing to Artful. He moved up to the speed marvel several times, and Lyne would keep him from coming through, no matter where he'd try. Then he broke down, and finished second at that. J. W. Rogers, trainer of Artful, remarked to me after the race that Bearcatcher was the only galloper he ever saw that could breeze to Artful. I am satisfied Bearcatcher could beat Artful, big as this may sound; in fact, I don't believe any horse ever lived with more speed than he. The only wonder is 'the Bear's' alive, let alone being the winner of twenty-eight races out of thirty-three starts." I respectfully refer readers to my article in the Christmas number of the Breeder and Sportsman of 1904, as to what I thought of Bearcatcher. At that time I put him in front of Beldame or any other racer in America.

In the death of Captain Samuel S. Brown, the Pittsburg multimillionaire, the American turf loses one of its staunchest supporters and the breeding ranks one of its leading lieutenants. Captain Brown has been prominent on the turf for about thirty years.

He owned several Buckdens along about 1880, and Matinee was the pride of his stable at one time. Then came Troubadour, who won the Suburban handicap and \$110,000 in bets for Captain Brown in that race in 1886. Senorita, best daughter of imp Prince Charlie, followed Troubadour, and so enamored was the millionaire of this great mare that he named his stock farm after her. Broomstick gained great fame in the Brown colors in 1903 and 1904, and this season Agile has kept up the reputation of the string. Captain Brown owned the Lexington track, which was established in 1826, and had made nearly \$100,000 worth of improvements there in the past eighteen months. It is said the genial captain left Senorita Farm and 100 of his horses to Max Samuelson, his financial agent and confidential man on the turf. The Lexington track will be operated by the estate's managers for the next ten years.

Nearly \$15,000 was realized at the dispersal sale of George Davis of Pleasanton, at Chase's salesyard last Tuesday night. The thirteen thoroughbreds were bid in; the trotters brought fair sums.

The 106 horses of Major B. G. Thomas and Colonel W. L. Simmons, sold by the Fasig-Tipton Co. at Lexington, Ky., last Tuesday, brought \$22,325, showing that the market for thoroughbred mares is not in a very healthy condition.

Manager J. W. Brooks of Los Angeles offered a \$2500 purse for a six furlong race between Handzarra, Cruzados and Bearcatcher, to settle the sprinting championship of the Coast, but the new California Jockey Club secured the last named pair to race today at five and one-half furlongs over the Ingleside track for a \$1500 purse. A banner crowd is expected for these are absolutely the fastest horses in training on the Coast, and it is doubtful if speedier ones were ever seen in this part of the world.

The death of Captain S. S. Brown was a severe blow to the American Turf Association, which had the best wishes and coin of the multimillionaire back of it.

Ichlana, the good St. Gatien mare in George Wentworth's stable, died last Wednesday. She has been ill ever since being shipped from Spokane last October, and stood up in her stall for thirty-two days. The mare was a winner in good company at the far East, here and at Los Angeles, and was valued at \$4,000. C. T. Henshall brought Ichlana to the Coast to race, and she was bred at Rancho del Paso.

John Mackey has recovered from his recent illness.

Matt Byrnes is getting together a good string of English horses to race around New York for a wealthy Wall streeter named J. W. Hennings.

H. T. Oxnard bought the game American Derby winner, Sidney Lucas, at a sale in New York on Wednesday for \$1,600.

Clandestine, the winner of the third race Wednesday for the Keene Bros., was boosted from \$400 to \$800. Toupee was "lifted" from \$1,200 to \$1,800 by C. C. McCafferty, who secured the gelding, and F. Gabriel, former owner of Toupee, claimed Instructor for \$1,325 from the Needmore Stable.

Dr. H. E. Rowell is training the yearlings recently purchased by Thomas H. Williams at the Burns & Waterhouse sale, and will in all probability handle the Jockey Club president's flyers at the East next season.

A big coup was attempted last Wednesday with Veteran, and he ran a good fourth on a fine field, most of the money going on at 100 to 1.

INGLESIDE RACE TRACK

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

COMING EVENTS.

Rod.

April 1-Sept. 15. Oct. 16-Feb. 1—Open season for taking steelhead in tidewater.
June 1-Jan. 1—Open season for black bass.
Sept. 10-Oct. 16—Close season in tidewater for steelhead.
Sept. 10-Oct. 16—Close season for catching salmon.
Sept. 15-April 1—Open season for lobsters and crawfish.
Oct. 16-Nov. 15—Close season for taking salmon above tide water.
Nov. 1-April 1—Trout season closed.
Nov. 1-April 1—Closed season for taking steelhead above the water.
Nov. 1-Sept. 1—Open season for crabs.
Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.
Sept. 1-Feb. 15—Open season for mountain quail, grouse and age hen.
Oct. 15-Feb. 15—Open season for quail, ducks, etc.
Oct. 15-April 1—Open season for English snipe.
Oct. 15-Aug 1—Deer season closed.

Bench Shows.

Nov. 30-Dec. 2—Philadelphia Dog Show Association. Philadelphia. J. Sergeant Price Jr., Secretary.
Dec. 7, 8—Toy Spaniel Club of America. New York. N. Goldberg, Secretary.
Dec. 11, 16—People's Pet Stock Show. Fort Wayne, Ind.
Dec. 13, 14—Southwestern Kennel Club's bench show at Pasadena. Entries close—
Dec. 18, 21—Colorado Springs Kennel Club.

1906.

Jan. 4, 6—Southern Ohio Kennel Club. Hamilton, O.
Jan. 17, 20—Cincinnati Kennel Association. Cincinnati, O. John C. Schomaker, Secretary.
Feb. 12, 15—Westminster Kennel Club. New York. Robt. V. McKim, Secretary.
Feb. 20, 23—New England Kennel Club. Boston. Wm. B. Emery, Secretary.
Feb. 28-March 3—Washington Kennel Club. Washington, Pa. F. C. Thomas, Secretary.
March 7, 10—Duquesne Kennel Club. Pittsburgh, Pa. F. S. Steadman, Secretary.
March 14, 17—Passaic County Fish and Game Protective Association. Paterson, N. J. N. J. Mathews, Secretary.
March 21, 24—Wolverine Kennel Club. Detroit, Mich. K. G. Smith, Secretary.
May 29, 30—Long Island Kennel Club. Jos. M. Dale, Secretary.
June 1, 2—Ladies Kennel Association of Mass. Mrs. L. M. Seed, Secretary.
June 9—Wissahickon Kennel Club. Wissahickon, Pa. J. Sergeant Price, Secretary.
Sept. 3, 6—Taunton Kennel Club. Taunton, Mass. A. J. Lee, Secretary.

Field Trials.

Nov. 21—International Field Trial Club. Ruthven, Ont. W. B. Wells, Honorary Secretary, Chatham, Ont.
Nov. 28—Virginia Field Trial Association. Martinsville, Va. Chas. B. Cooke, Secretary, Richmond, Va.
Dec. 2—Continental Field Trial Club. 11th annual trials. Waynesboro, Ga. John White, Secretary, Hempstead, Long Island.
Dec. 7—Pointer Club of America (following the Continental trials). Barber, N. C. C. F. Lewis, Secretary, 136 Maiden Lane, New York.
Dec. 12—Eastern Field Trial Club. Waynesboro, Ga. S. C. Bradley, Secretary, Fairfield, Conn.
Dec. 18—Alabama Field Trial Club. Huntsville, Ala.

1906.

Jan. 9—Georgia Field Trial Association. Waynesboro, Ga. P. M. Essig, Secretary, Atlanta, Ga.
Jan. 8—Pacific Coast Field Trials Club, 23d annual trials. Bakersfield, Cal. Albert Betz, Secretary, 201 Parrott Bldg., San Francisco.
Jan. 8—Texas Field Trial Club. 4th annual trials. Kansas City, Tex.
Jan. 15—United States Field Trial Club. Grand Junction, Tenn. W. B. Stafford, Secretary.
Jan. —National Championship Field Trial Association. Grand Junction, Tenn. W. B. Stafford, Secretary.

PENETRATION AND VELOCITY.

The test of velocity as a means of judging the penetration of a charge of shot has, from time to time, elicited much criticism. The differences of opinion between the old and the new schools may, perhaps, be diminished reviewing the developments which have occurred. Black powder was so stable an explosive, and its action so little open to variations of one kind and another, that a rough and ready test of penetration by way of shooting at a gunpowder tin was sufficient to judge the strength of the charge, provided the pattern was already known to be satisfactory. Close observation of results and ingenious theorizing to elucidate hidden truths provided the nearest approach that was then possible to scientific gun experiments. At such a time the sportsman occupied as favorable a position as the trade expert for making the kind of test which was then regarded as determining the behavior of the gun or shell. The very enthusiasm with which these researches were conducted necessarily paved the way for the series of developments which have carried experimental gun work beyond the reach of the ordinary shooter. The scientist has now carried things so far that the mission of instructing sportsmen is almost entirely confined to explaining in the language of the elementary textbook the experiments which are now conducted to determine the behavior of guns and nitro powder.

The stumbling block in all modern experiments is to demonstrate to the sportsman that the measurement of velocity over twenty yards, provides an efficient index to the penetration of a charge of shot. Mr. Griffith, in his historical experiments to determine the stringing out of a charge of shot, fired at a circular plate of twelve feet diameter, which made about five and a half revolutions per second. It was shown

that at twenty yards, the charge of shot had strung out over a distance of about forty inches, whereas at forty yards, nearly nine feet, separated the front from the back pellets of the charge. These figures are constantly brought up against us as evidence of the fact that chronographic measurements take account only of the behavior of the front pellets of the charge. A careful examination of the diagrams reproduced on page 51 of Part I, of "Sporting Guns and Gunpowders," shows that 90 per cent, at least of the total number of pellets which struck the target at twenty yards range are concentrated into a little over twenty inches. Considering that at the usual sporting distances the shot is traveling with more than ten times the velocity of the bird, it would seem as though for all practical purposes the twenty yards velocity test might be regarded as fully covering the behavior of the entire charge. Mr. Borland spent a considerable amount of time, and his company no doubt contributed a proportional amount of money, to analyze still further the measurement of velocity. The arrangement used registered alternatively the arrival of the first pellets and the whole charge. The fact that Mr. Borland employs the ordinary method of testing velocity over twenty yards for the routine work incidental to the manufacture of E. C. powder seems to suggest that he, at any rate, after trying both methods, is satisfied that the simple arrangement is also the best.

If a shell gives a suitable velocity over twenty yards, as judged by present day standards, it seems impossible to understand how it can give abnormal results at other distances. In the course of a year hundreds of tons of powder are graded and regulated on the twenty yards test, and no one appears yet to have discovered a single instance in which a correctly regulated powder gives indifferent results when properly loaded and fired in an ordinary gun. Experience again confirms the obvious conclusion that a powder with a weak velocity proves deficient in penetration when tried on game. In a similar manner an excess of velocity, however it may be produced, is at all times liable to produce such a scattering effect of the pellets as will diminish the effectiveness of the shooting. There is, therefore, overwhelming evidence that the velocity test of penetration is completely satisfactory from whatever point of view it may be regarded. Notwithstanding this weight of evidence, it has been held that every gun must be considered as a thing apart, and that the velocity test of a shell affords no index of how it will behave in a given gun. It is just the particle of truth underlying this statement which makes it difficult to provide a comprehensive answer. If the generality of guns in use are regarded as complying within approximate limits to a pre-determined standard, it is clear enough that a million of shells containing powder which has passed the velocity and other tests, will give better results in the aggregate than a similar number of shells complying with a different specification. If every gun in which these shells are used could be subjected to a special test for velocity, there is no doubt that a definite proportion of them would be found to give abnormal behavior. The proper remedy to adopt would be to alter those guns which are susceptible to alteration, and to throw out of use the others, which, by reason of excessively large chambers, badly shaped cones, or unduly wide barrels are found to be deficient in necessary material. Failing the mechanical remedy, some improvement might be made by modifying the charge of powder so as to correct in some measure the bad behavior of the gun. Such a course is bad, because it admits the principle of correcting a fault in the gun by introducing another in the shell.

The above observation seems to imply the need for every gunmaker to test the velocity of every gun before sale, with properly loaded shells. Such a suggestion is, however, impracticable, but it nevertheless carries with it a useful indication of the means which should be adopted to make the generality of guns so that they may produce the results anticipated by the powder manufacturer when he regulates his product. At the time when we were engaged in supervising the manufacture of our experimental barrels for testing sporting cartridges, says the Field, it became necessary to work out a specification for the chamber, cone, and bore which would give a proper standard of velocity. The early barrels were found to give an extraordinary excess above the expected amount of velocity. This abnormality was traced to the dimensions of the chamber and the shape of the cone. When the barrel had been adjusted to a new set of dimensions a specification was arrived at, which proved to give satisfactory results in all barrels subsequently manufactured. The gunmaker who carried out this work on our behalf at once appreciated the importance of this discovery, and he instantly put in hand a set of gauges and cutting tools to control his own output on the lines approved by our tests.

We have been instrumental in other directions in privately initiating the same useful reform, and it has been interesting to find, whenever the opportunity has arisen for testing subsequent output, that all the guns controlled by the gauges so determined have given the correct amount of velocity. Such an experience seems to demonstrate the utility of the twenty-yards velocity test as a means of regulating the behavior not only of the cartridge but of the gun as well.

To insure a repetition of the proof barrel results in the sportsman's own weapon, it is clear that the guns should be chambered and bored truly to gauge. If the gun is incorrect in these respects the sportsman will suffer more or less, according to the amount of error existing. He cannot gain any useful information from penetration tests; and without a large amount of experience, which in the nature of things he cannot possess, it is impossible for him to learn much from examining patterns on the whitewashed plate.

The regulation of the gun is purely and simply a question for the gunmaker, and it is in the selection of a man who knows his business that the sportsman stands his best and only chance of getting a gun which will include, among the many attributes of successful use in the field, a form of chamber and bore capable of showing the shells on its best behavior.

From what has been said, it will be apparent that the sportsman's own tests of thirty years ago must now be dismissed as embodying superstitions of the middle ages. To attempt to prove that the stringing effect of the shot is a factor which the practical sportsman must bear in mind is on a par with the assumption that penetration can be judged by examining the characteristics of the splash the pellet makes on the target. The only test which comes to us from the days preceding modern electrical developments is that of the whitewashed plate. Even this is of secondary importance to the proper gauging of the interior of the barrel. To correct the shooting of a gun without regard to the shape of the chamber and cone is blind groping in the dark.

Pattern tests are certainly of very great use in determining the selection of charges and the choice of a suitable size of shot. At a time when the gunmaker controls his output with standard gauges, and the powder manufacturer is clear as to the characteristics that must be imparted to the explosive, and finally, when sportsmen appreciate the importance of a sound system of loading, the most satisfactory test of the joint behavior of a gun and shell is on game. A distinct impression remains after each day's sport as to whether or not one's individual contribution to the bag has been in proportion to the skill exercised, and it is by the guidance so derived that the sportsman will be able to select from the recognized charges available the particular combination of powder and shot that best suits his own particular gun and style of shooting.

THE PLAINSMAN'S SIXTH SENSE.

"Did you ever hear of the plainsman's sixth sense?" asked W. D. King, Jr., who was one of a little group of sportsmen in Clabrough, Golcher & Co.'s sporting goods store on Market street the other day. "It is a thing that has often puzzled me in knocking about among the ranchmen of Montana."

"I myself have seen this sixth sense manifest itself under extraordinary conditions and have known of lots of instances in which it operated with almost the precision of a special providence. And yet, although I've done my best to get it out of the ranchmen, I never found one who could explain it."

"There was the time, for instance, when Prairie Dog Jenkins detected a ranch eight miles away by the aid of the sixth sense. Prairie Dog was an old hunter and one of the best cowmen in Montana. In the summer of 1890 he and Dynamite Dick went up Fallon creek together, a country that Dynamite Dick had not been in for ten years, and Prairie Dog never. They were riding along eight or nine miles from Witherby's ranch one day about 2 o'clock when Prairie Dog said to Dick:

"'Pretty near a ranch, aren't we?'"

"'No,' said Dick, for Witherby had taken up his ranch since Dick had been in the country."

"'Must be,' returned Prairie Dog. 'I smell 'em making coffee. It's that way,' he went on, pointing in a certain direction."

"And, Prairie Dog leading and Dick following, they rode straight as a string till they rode into Witherby's back yard."

"As they sat around the table eating the chuck the boys got for them, Dynamite Dick, thinking to be funny, told how Prairie Dog had smelled their coffee eight miles away. There was no other ranch nearer than forty miles in those days. Then one of the fellows asked:

"'What time was it you smelled the coffee?'"

"'About 2,' said Prairie Dog."

"The boys looked at each other, and then they looked at Prairie Dog. Then:

"'Two of the boys got in late,' they said, 'so we made a fire and were making fresh coffee for them. And it was just about 2 o'clock'."

"Now, in that case," continued King, "you might say the sixth sense was nothing but an extraordinarily sensitive nose. But it was something more spiritual than a mere nose that guided 'Frisko Frank when he and Ned Carruth lost their way to the bull camp."

"One summer all the bulls from the country just south of Terry were gathered in a big pasture on the Yellowstone. In the fall, when the other cattlemen took their hulls out of camp, Frank and Ned were not on hand for some reason, so they decided they would go together."

"It was about thirty miles to the bull camp, through an unfamiliar country, and what with starting rather late and one thing and another the men lost their bearings. As it was getting along toward evening they thought they'd better strike a place for the night and go on next day."

"They had heard that a sheep man had a tent out and a man herding sheep, and though neither had the ghost of an idea where to find it, they decided to spend the night there. So they stopped and studied the landscape."

"'Well, you're the doctor,' said Ned. 'Which way shall we go?'"

"'Frisko Frank rode up on a butte and took a squint

round the horizon, and then pointed without hesitation.

"Let's go that way," he said.

"And after they had ridden about ten miles and come over a little hill right down below them in a draw was a tent. They were within sixty feet of it before they saw it at all. They had hit on the only human habitation in all that country."

Before King had concluded his narrative, "Pete Wilson" joined the group and in his usual generous style insisted on an immediate adjournment for "irrigation" of the inner man. After the story teller was through the listeners accepted Pete's invitation.

Whilst King was sipping his Napa soda, he counted heads and noticed that the crowd had increased from five to ten. This prompted him to remark:

"Well, I guess some of the frequenters of Sportsmen's Row could 'put it on' the plainsmen for sixth sense if they only had half a chance."

A DESERT BILL OF FARE.

A party of Los Angeles sportsmen were on a duck hunting trip to the Colorado delta region recently. Ducks and shore birds were so plentiful that the sportsmen soon had a satiety. On the return a detour was made to a good quail shooting district, where the trio of hunters found birds fairly numerous and sport correspondingly good—that is, when they could get the birds in a patch free from cactus.

One of the party was of an observing and investigating turn of mind—prompted by a brief visit to an Indian rancheria. The results of inquiry, as to the Indian method of supplying the larder and some of the things eaten evolved the following story for the Los Angeles Times.

About some of the Indian villages are to be seen small patches of maize or a few tiny melon patches, but these cultivated areas are of little account as compared with the number of persons to be fed. These, too, are exceptions rather than the rule, a majority of the towns having no such cultivated fields.

In the various parts of the arid region which shelters so great a portion of our barbarian population is found a tree remarkable for certain properties. The botanical name of this plant is *Prosopis juliflora*. It is popularly known as the algaroba, or honey mesquite. This tree thrives with little moisture, grows, with thick, bushy top, to a height of twenty to forty feet, affords shelter from the wind and sun, and, best of all in the sight of the hungry natives, it yields abundant crops of fruit known as mesquite beans. The slim green pods hang in clusters from the tips of the boughs, often bending the branches nearly to breaking, so abundant do they grow. The pods, which are six or seven inches long, are pulpy, juicy, fairly palatable and nourishing.

These beans are gathered, dried and stored in the peculiar granaries of the Indians—huge baskets holding several bushels each—and are pulverized when wanted for food in wooden or stone mortars, and the meal thus formed is soaked in water and eaten without further preparation or it is baked into a sort of unleavened bread. It is the principal and favorite food of several tribes.

The screw bean is another food product, less plentiful, but even more highly prized because of its sugary qualities. This fruit is often eaten as plucked from the tree. It ripens the latter part of June or July, a little later than the mesquite bean.

In some of the mountain sections the *Prunus andersonii*, or chamish, is found in abundance. The pits of this fruit are pounded in mortars, and the meal is then eaten. There are many varieties of the cactus fruit which are utilized for food, the fruit of the *Opuntia tuna* or prickly pear being a notable example.

The dead loco weed, the pest of the cattlemen, is a favorite with the Indians, for the yellow pods of the plant when pulverized serve as spice to render some of the otherwise insipid dishes palatable.

The roots of the cancer root are roasted over live coals, and when young, succulent and nourishing are prime favorites with the red epicureans.

Flowers of the yucca and agave are hoiled, dried and preserved, to be eaten as occasion requires. The young shoots or crowns of these plants are also roasted and eaten. Seeds of the *Artemisia tridentata* or wormwood and the *Atriplex lentiformis* are pulverized and eaten. Pine nuts form a very important item of food with many of the tribes in the wooded section of the country, and acorns furnish other tribes with a large part of their living.

There are other herbs which are utilized by the Indians as food. Indeed, there are few plants which are not capable of being rendered edible in some manner. There are, however, other things besides plants which are made to satisfy the pangs of hunger. In the animal kingdom are a number of varieties of creatures, not classed in the game list of the white man, which minister to the appetites and needs of the red man.

There are in the southwest, particularly in California, bodies of bitter, poisonous waters known as boracic lakes. Owen's lake, twenty miles long, is of this class. It is a veritable Dead sea, and, like the sea of that name and its counterpart, the Great Salt lake of Utah, its heavy, brackish waters do not support fish or marine life.

At certain seasons of the year the waters of these boracic lakes abound in white grubs known to the Indians of that region as "koochabee." These grubs are the larvae of a two winged fly, the *Ephydra californica*. So plentiful are these grubs in their season they line the shores of the lake to a depth of several inches, where the waves cast them up from their watery incubator. The Indians at this season of the year camp upon the shores of the lake, gather this peculiar harvest and dry it in the sun. Later the grubs are ground in stone mortars into fine powder, and from this insect meal they bake a bread which

is highly prized.

There are a number of other insects—lizards, reptiles and the like—which are used as food by different tribes. The chuckawalla, a lizard somewhat resembling the Gila monster, is a common article of food with some of the tribes north of the line. It may not be the most inviting of foods—some of the insect and reptilian foods are far from palatable—but the desert Indian is not inclined to quarrel with anything which stops the gnawing beneath his belt, and he evidently believes that "not that which goeth into the mouth defileth the man."

The lizards, mostly of the chuckawalla variety, are big, fat, lazy fellows, seemingly incapable of action when seen asleep, or sunning themselves, on a flat-topped rock. Try to hit one with a stick for instance; all you will see will be a gray-black streak vanishing into a crack in the rock. They are from one to two feet in length, over half of which is tail—thick, round, fat tail, and this is the principal part that is eaten. The flesh, when cooked, is as white as that of the tenderest young chicken, and, so it is claimed, of a much better flavor—being likened to a mixture between fish and young tree squirrel by one who has sampled it. The Putes enclose these lizards, head, tail, entrails and all, in a fairly thick coating of clay and roast them in pits in the ground. This dish has a flavor of its own that few white men have the temerity to dally with.

THE MONGOOSE.

Sportsmen of the Hawaiian Islands have recently been much concerned over the ravages of the mongoose, which animal is a menace to the existence of feathered game on several of the islands.

Two varieties of pheasants, the Mongolian and the Japanese blue pheasant, promised to become very plentiful on Molokai. California Valley quail thrive well in Oahu and the beautiful mountain quail, there called royal quail, found a congenial habitat on Molokai Island. Wild turkeys offered good sport to hunters who visit the Elwa and Waiolae ranges on Oahu. Chinese pigeons, called doves, thrive on nearly all of the islands. All of the above varieties were successfully introduced in the islands, but the danger of final extermination by the mongoose is steadily growing.

The two native varieties of game birds, the Hawaiian wild goose and the Hawaiian teal duck, number but a few hundred, in isolated sections, where once they were plentiful, having been nearly cleaned out by the mongoose.

This obnoxious little beast, luckily, has up to the present time been confined to certain localities and the utmost precaution is taken to prevent its presence in all of the islands of the group.

The following description of the animal, as it is found in its native habitat, is by an Indian naturalist:

"Probably greater interest, curiosity and speculation centers round the mongoose, his habits and ways, than any other of the smaller four-footed denizens of the wild jungles of the East.

"Intense interest, flavored by much human sympathy for the plucky little creature, is aroused by the deadly and irreconcilable hatred he bears to all and every species of the snake tribe which no matter, where or when met with, whether larger or small, deadly or harmless, he fearlessly attacks, exhibiting at the mere sight of the reptile a violent and uncontrollable anger evinced by every hair on his body standing out rigid and stiff from the skin, by a sharp hissing whistling call—the challenge to mortal combat.

"Our curiosity is keenly aroused by the wonderful immunity enjoyed by the mongoose from the deadly fangs, and still more deadly poisons of the most venomous species of snake, against whom he wages a ceaseless racial war; and speculation is rife as to the causes of this immunity.

"The native of India relates how the stricken mongoose after killing his enemy, and having devoured its brain, evidently regarded in the light of a delicacy not to be forgone under any circumstance, hurries off to the depths of the jungles in search of some special herb, known to the mongoose alone, which acts as an immediate antidote against the most deadly of poisons.

"The ordinary observer ascribes the safety of the mongoose to his extraordinary agility and lightning-like movements, but as the snake strikes with terrible rapidity and certainty, it is difficult to believe that the mongoose should escape every time, and yet there is no case on record of a mongoose having been bested in a single fight, and having paid the penalty of death.

"A theory was advanced that inoculation of snake virus for many generations of the mongoose family had rendered them immune to its deadly effect; but this has been proved time and again to be a fallacy, as a tame mongoose purposely bitten by a deadly snake has died within a short time, exhibiting all the usual symptoms resulting from snake poison. The mongoose thus bitten has also been let loose in a circumscribed piece of wild jungle and has been found dead, thus refuting the native idea of the existence of an herb antidote—though the possibility of the herb not existing in the circumscribed piece of jungle weakens the proof. The only theory put forward that seems to hold water, is that the stiff bristling hairs of the angry mongoose forms his natural protection.

"The long bristly hairs that cover the body of the mongoose, from his neck to the tip of his tail, as distinct from the soft fine under fur with which his body, head and feet are covered, vary from two to three inches in length, and bristle up and stand out rigid from the body the moment a snake is sighted and remain rigid and bristling throughout the fight, giving him the appearance of an animated chevaux-de-frise.

"The moment the sensitive palate of the striking snake is touched by the points of the bristles, the

snake's mouth closes instinctively and intantaneously with the object of drawing the poison fangs seated in the upper palate deeply into the object struck at. The consequent pressure on the poison bag ejects the poison into the bristles, and thus the poison never reaches the blood by actual penetration of the skin.

"That the mongoose evinces no fear of the snake has been proved times without number, but on the other hand the deadly fear in which the snake lives of the mongoose is an equally well established fact. Should the snake first sight his race enemy he will use every device to avoid detection, but should he be sighted, he will always try to escape by flight if possible, and will never accept battle unless driven to the last extremity.

"The tactics of the fight and the results are invariably the same. The mongoose with bristling hair, boldly attacks, darting about with an agility wonderful to behold. The snake with head erect and well thrown back, faces his opponent, rapidly striking at him whenever he considers him within reach, hissing furiously the while. Watching his opportunity with a spring the mongoose seizes him by the neck just below the back of the head, one crunch of his sharp needle-like teeth, a few spasmodic convulsions on the part of the snake—and the battle is over.

"A hairy animal of the ferret type, but three or four times as big, varying from silver grey to russet brown in color, in the wild state the mongoose may be seen sitting in the half darkened entrance to his den or hole, listening intently before venturing out upon the world; and then cautiously proceeding out takes cover at once, moving noiselessly along hedgerows, banks and dried up watercourses in search of his enemy or his food. Generally well hidden from sight, he rarely faces the open, but is ever keen and alert, ready to spring upon his unwary prey, or to rush off silently and rapidly to the shelter of his den.

"Small birds, ground game, poultry, rats, mice and lizards form his staple food, and he has been known to eat carrion, but of the snake the only part he eats is the brain.

"The marvellous racial enmity of the mongoose to the snake and the deadly warfare waged between them has been exemplified in a striking way in the West Indies.

"There on some of the islands snakes increased so fast as to become a source of danger to human life. The mongoose was largely imported and let loose upon the islands with astounding results. The snake in the islands experimented upon is almost extinct, but the mongoose has increased and multiplied to such an extent as almost to equal the rabbit scourge of Australia, but in addition to clearing the place of snakes, the mongoose has killed off all the ground game of the islands, especially partridges, which at one time were numerous, and afforded good sport to the guns.

"In India the partridge has not suffered much damage from the mongoose, but in India the partridge roosts in trees and bushes, and not on the ground—a habit that may have been formed for self-protection against the mongoose.

"In captivity, if caught when quite young, the mongoose becomes tractable, and makes a charming pet, being clean and noiseless in his ways. He becomes most attached to his master, if kindly treated, and will follow to heel like a dog, run up and down his master's person, perch on the shoulder, nibble at his ear, never actually biting, and in a thousand and one playful ways endear himself to his owner.

"Like the snake the mongoose is passionately fond of milk, and, cat-like, loves being rubbed down with a hard brush, purring the while, and being quite upset when the operation ceases.

"In tropical and snake infested countries, the mongoose is quite a common pet, and is kept in many homes as a protection against them. He forages for himself entirely, roaming about the house and grounds at his own free will, but has usually some fixed habitat, generally a corner under some cupboard, or box, where he is safe from the reach of troublesome terriers—about the only animal he fears.

"If fed regularly, he will turn up marvellously punctual for his saucer of milk or bit of fish, and if not served to the moment, has been heard to swear most volubly until his wants are attended to. A nicer, cleaner and more charming pet it would be hard to find anywhere."

EXTERNAL PARASITES OF THE DOG.

Ordinary mange and follicular mange are the result of the invasion of acari, which bear a general resemblance to cheese mites; in fact are called mange mites, and an ordinary observer looking at cheese mites and the several varieties of mange mites would at once affirm that they were all exactly alike. To the eye of the expert, however, they differ sufficiently in details of structure, as length of leg, formation of the mouth, and habits of life to render a division of them into families perfectly easy. The most common mange mites are those which cling to the hair and feed on the waste products of the integument, also causing considerable increase of those products by the irritation which they set up by the movement of their legs and the use of their pointed, beak-like mouths, which are so arranged that they may be inserted into the openings of the follicles in the search for food. These wandering mites are found in the greatest abundance on the back, breasts, and on the heads of the animals which they infest, and by the aid of the abundant secretion which they cause, chiefly from the sebaceous follicles, they are enabled to shelter themselves under the accumulated masses, which resemble soft scabs. These are so abundant in the sheep that the disease which they excite is universally known as scab. In the dog the wandering mites (*dermatodectes*) are comparatively rare. The mange mite of the dog is the *sarcoptes*, or burrowing mite, which forms galleries beneath the cu-

tick by the means of its powerful cutting jaws, which are much like the claws of the lobster, and are armed with teeth in a similar manner. Another mange mite which is found on the skin of the dog occasionally is the *Symbiotes auricularum*, which invades the ear, and causes very peculiar symptoms. The disorder in this country is either very rare or it is overlooked or confounded with canker in the ear, and possibly when the characteristic symptom is developed in the form of an attack of epilepsy the parasitic origin of the disease is never even suspected.

In addition to the acari which are recognized as mange mites, there is to be added the common tick (*Ixodes*), of which there are several species attacking birds and quadrupeds. Dogs, especially sporting dogs, are constantly attacked by the ticks, which are temporarily living on the leaves of shrubs, ready to take advantage of animals which come within their reach. These parasites are inveterate bloodsuckers, and appear to carry on their operations without attracting much attention from the animals which they invade. They do not wander; indeed, their short, weak limbs are not adapted for traveling, but they pierce the skin by the use of a pointed instrument (sostrum), which is covered with sharp spines so arranged that when it is once inserted into the skin it is impossible to remove the tick without leaving the armed sostrum behind. When these parasites are very numerous they may cause serious losses. In one instance which has been recorded in the London Field the death of a large number of lambs from what was looked upon as a mysterious disease proved to be perfectly simple. An inquiry revealed the cause of the fatality at once. The bodies of the dead lambs were found to be covered with ticks, which had slowly but surely bled the unfortunate animals to death. All the structures were completely blanched and bloodless. If the cause of the mischief had been discovered earlier, as it must have been had two or three of the first victims been examined by a veterinary surgeon, the rest of the flock would, as a matter of course, have been dipped in one of the many preparations for dipping sheep, diluted to a greater extent than is necessary for adult animals, and the ticks, instead of killing the lambs, would themselves have been effectually destroyed. It is not at all probable that the dogs, however severely attacked by ticks, would be damaged seriously, as the discovery of the presence of the parasites could not be long delayed, and the necessary treatment would be promptly applied. A weak solution of carbolic acid, two per cent, would be sufficient to kill the parasites, or perhaps more conveniently a washing with carbolic soap might be employed, and repeated if necessary. Another variety of acarid which has recently been described is known as the *Demodex folliculorum*. The cause of red mange is likely to be allowed to remain undisturbed for some time, from the circumstance that it is hidden in the follicles of the skin, from which it is not easily dislodged. The disease which results from the invasion of the demodex is of all forms of mange the most objectionable to the dog's owner, particularly in the case of the pet dog, which is constantly being nursed. It is well known that the *Demodex folliculorum* infests the hair follicles and sebaceous follicles of the human subject, and although the parasites in ordinary cases do not cause any inconvenience, the idea of the creature crawling from the skin of the dog to the skin of the dog's owner, the nose or some part of the face being the most likely point of attack, is not altogether pleasant, and the fact of the infested human being returning the compliment by transferring the acarid to the dog, as doubtless happens in many cases, can hardly be considered as a compensation.

The most common and best known of skin parasites of the dog are lice and fleas. About these pests there is no mystery, as there is no attempt at concealment, and the owner of the pet animal so infested, as all such pets are more or less, finds some occupation from time to time, to judge from appearances, not altogether repulsive, in hunting for the parasites and destroying them in a summary manner. The washings with carbolic or other soap to which the house dog is subjected keep these pests in check, but it may be mentioned in passing that the washing, to be effective, should be done, or at least superintended, by the owner. For years past specimens of hairs from dogs suffering from skin diseases have been sent to veterinarians for examination, in most instances with the statement that the animal has been regularly washed with some specified soap. In a large proportion of the specimens the hairs have been found matted together with what may fairly be termed filth, which it was necessary to get rid of before the individual hairs could be seen. Washing should be followed by combing while the coat is still wet, as the best means of clearing away adherent dirt and parasites at the same time.

DOINGS IN DOGDOM.

A Classy Puppy.

Dr. J. Dunn is the pleased owner of a handsome dog puppy presented to him by Jos. E. Terry. The puppy is about three months old and was one of a most favorably regarded litter whelped by Roxane (Lady's Count Gladstone-Jessie Rodfield), a sister of Iona S. Kilgariff (Orion-Terry's Lady), the classy field trial winner, is the sire.

Pasadena Show.

Entries closed for the Southwestern Kennel Club show at Pasadena on Wednesday and Thursday with a total of 250. Bostons headed the list with forty entries. Fox Terriers came next. Collies were sixteen strong. Cockers and Irish Setters followed, an equal number of each breed were entered. San Francisco was represented by a small string of good ones.

The initial show of the Colorado Springs Kennel

Club is dated for next week, four days, December 18 to 21. James Cole of Kansas City will judge. W. S. Trowbridge, Colorado Springs, is secretary of the club.

Merry Heart Sent East.

Albert Betz's well-known English Setter bitch Merry Heart (Merry Monarch-Sweetheart's Last) was shipped to West Point, Miss., last week. She will be bred to W. W. Titus' Count Whitestone. Among English Setter fanciers this nick is believed to be a remarkably good one.

A Promising Young Bull Terrier.

Charles Reid Thorburn's recent purchase, the good young Bull Terrier Woodlawn Baron (Bloomsbury Baron-Newmarket Queen) won reserve winners at Pasadena this week. There is a number of good dogs in Southern California and W. Baron's win is in keeping with the possible career that was outlined for him by local fanciers.

Ch. Meg Merrilies II, whelped on November 23rd six strong puppies (four dogs) to A. Joseph's Bloomsbury Baron. The litter is more than promising for several good ones and is getting on finely.

One puppy was liked so well by Mr. Jack Bird, of Oakland, that he secured the youngster for \$100.

Mr. Thorburn is to be congratulated upon his success in following up his fancy for the breed. Meg Merrilies, it will be remembered, became a great show favorite this year at several coast shows where she was handled, in the ring, by Mrs. Thorburn (her owner, by the way) in so attractive a style as to frequently induce rounds of applause from spectators and rival exhibitors as well.

Collies in Demand.

Glen Tana Collie Kennels of Spokane, Wash., report the following sales for month ending November 30th: Glen Tana Duchess (Glen Tana Marquis-Glen Tana Nina) to F. Martin, Alaska; Glen Tana Bell (Craigmore Crackman-Gold Belle), and Glen Tana Peep o' Day (Glen Tana Marquis-Champion Bo-Peep) to L. Burger, California; one dog puppy (Glen Tana Marquis-Glen Tana Talent II), and one dog puppy (Glen Tana Radiance-Moreton Vesta) to B. Muzzy, California; Glen Tana Lady (Rippowan's Archer-Spok Lassie) to E. G. Irwin, Montana; Glen Tana Buttercup (Braehad Commander-Craigmore Ethel), and three dog puppies (Glen Tana Boulder-Little Verona) to O. J. Albee, California; one dog puppy, (Glen Tana Marquis-Brandame Marionslea) to A. Otis, Washington; one dog puppy (Glen Tana Marquis-Brandame Marionslea) and one bitch pup (Glen Tana Radiance-Glengairn Lassie), to S. McCoy, Idaho, which argues that Mr. Griffiths' Collies are very much in demand—as they should be, for his stock is of the best.

FLY-CASTING CLUB DINNER.

The bi-monthly meeting and dinner of the San Francisco Fly-Casting Club last Tuesday evening was well attended by members and invited guests.

During the discussion of the business affairs of the club a report submitted through the Executive Committee met with general favor and was practically adopted.

The report covered the mooted question of securing for the club members a desirable location for a fishing preserve on a coast trout stream. The matter was discussed at considerable length.

The outlook for a clubhouse and "home of its own" for the club, in the near future, is now pretty well assured. This purpose was originally promoted by the charter members of the club when it was organized about ten years ago. For financing the project it was decided to raise the club dues to \$1.00 a month and an initial assessment of \$10 was levied.

The grand collection of flies, tied by John S. Benn, ordered by the club some time ago, and which has been awarded gold medals at the recent St. Louis and Portland exhibitions, is in danger of losing its value as an artistic collection of lures, for it was decided to dispose of the collection by raffle, 500 tickets at \$1.00 each, purchase of chances open to all anglers.

Whether the collection will be broken up into lots or disposed of as a whole remains to be arranged. At all events the sentiment was to put the prize lures to practical use next season and devote the \$500 in hard cash to be realized towards the preserve and clubhouse fund.

Incidentally, we may mention that this collection will probably be the last effort in this line by the noted fly-tyer, John S. Benn, more's the pity.

Louis Titus, Frederick McGee, William A. McGee and Milton H. Cook were advanced from the waiting list to full membership by unanimous ballot.

Edward Everett presided in the chair during the evening and Alex T. Vogelsang, in a happy vein, presented on behalf of the club four trophies won by contestants at Stow Lake this season.

C. Roland Kenniff (who was absent) won the championship long distance medal. E. A. Mocker received the first class long distance gold medal. John Marsden won the second class gold medal for long distance. Walter D. Mansfield won the Achilles Ross trophy, a valuable field glass, for the three best scores in delicacy for 1904-5. In this competition he was closely pressed by G. W. Lane and C. R. Kenniff. G. W. Lane won the champion class gold medal in the accuracy contests. Austin Sperry received the gold medal awarded for the best general improvement in all events. Each of the prize winners addressed the meeting in a few words on topics congenial to anglers.

The other winners for the season were: Colonel G. C. Edwards, first class in delicacy; J. Marsden, second class in delicacy; T. C. Kierulff, lure-casting championship; C. R. Kenniff, accuracy championship; T. C. Kierulff, first class, and J. Marsden, second class in accuracy. The medals for the foregoing events

will be finally awarded to the contestants having a record of three successive seasons' wins.

Among the members and guests present were: President Edward Everett, W. D. Mansfield, Alex T. Vogelsang, Tom C. Kierulff, Carlos G. Young, John Marsden, A. Muller, James Watt, Frank V. Bell, Geo. Walker, A. S. Carman, E. A. Mocker, W. H. L. Miller, Charles Huyck, George W. Lane, F. J. Lane, W. C. Swain, J. Hayden Butler, Charles H. Kewell, J. S. Turner, Joseph Peltier, Colonel G. C. Edwards, W. A. Cooper, H. E. Skinner, George Barber, G. H. Newman, E. H. Horton, F. H. Reed, George Lagercrantz, R. Isenbruck, M. H. Cook, Dr. F. L. Platt, Austin Sperry, H. A. Sperry, H. H. Kirk, W. J. Kierulff, W. F. Bogart, J. H. Hopps, J. X. DeWitt, R. A. Smyth and R. L. l'Honniedieu.

HUNTING NOTES.

Sportsmen who fancy duck shooting have had plenty of sport the past two weeks. Local shooters have been successful in getting good bags in many sections. Most of the birds are in excellent condition.

Bay shooting has hardly approached anything like what it will be when the weather becomes more unsettled and the rains begin in earnest.

On the Suisun marshes the past week has practically been a repetition of the general good luck gunners have had since the season opened.

On some portions of the Alameda marshes there is a notable scarcity of birds where once they were very plentiful every winter.

Conditions on the Empire Club preserve at Elkhorn slough are of an enviable nature. Last Sunday James P. Sweeney, shooting over pond No. 5, bagged a limit number of canvasbacks. Milton Pray repeated the shoot in the afternoon. Pretty good pond—100 "cans" for one day. Dr. Mertes, a new member, shot 46 "cans" and stated that had there been another gun on his pond he would have easily filled out the limit and so would the other shooter. J. R. Hauer bagged the limit at pond 7; 47 of his birds were spoonneys. The pond is now known as the Ben Butler pond. Tiring of shooting spoonneys he left his blind and secured a nice string of snipe in the marsh nearby, after which he filled out his penchant for variety by getting a number of quail within a short distance of the duck grounds. On Wednesday Dr. Alden shot a big string of canvasbacks—35 of these were killed before noon. He sat out a stool of sixty decoys.

The sport on the Empire preserve has been good ever since the season opened and promises to continue. Other members have also got limits time and again.

Reports from Rio Vista state that duck shooting in the tules along the river above that point never was better. Good shooting has been had on the various ponds and marshes north of the town. S. J. Claridge made a bag of forty ducks on the Gates ponds and others from that place have nearly had the same success on the same ponds. Goose shooting has also been good on the ponds and on Ryer and Brannan Islands, as well as in the open fields close to town. Quite a number of honkers have been killed also.

There is a lake, or rather a chain of three lakes, about a mile southwest of Ceres, near Modesto, that has developed from canal seepage, has grown up with tules and is proving a particularly good duck haunt. It is said, in fact, that "the ducks are there all the time." Some of the Ceres sportsmen have leased the shooting privileges on this chain of lakes—formerly a swale—and have organized a club. The organization is to be known as the Ceres Gun Club and consists of C. A. McAllister, Myron Warner, Vaughn Whitmore, Guy Whitmore, Roy Warner and Ed. Whitmore.

Quail hunters in the vicinity of Madera find limit bags comparatively easy to shoot.

Wild geese are now in Colusa and Glen counties "by the millions."

A report from Sacramento states that on the preserves of the Canvasback Gun Club, north of the capital city, nine hunters on Sunday broke the record by obtaining limit bags of ducks. As a result of the day's shoot the sportsmen returned with 450 ducks of all varieties, and the distribution gladdened many of their friends. Those who participated in the outing were: F. E. Wright, W. H. Sherburne, William Kennedy, John Norton, Justice J. C. March, George B. Stack, J. H. Donnelly, E. H. McKee and Fred Peck.

No better evidence of the splendid supply of shooting material in Southern California this season could be asked than the testimony of several ranchers from the Imperial country, given last week. These gentlemen say the ducks, always plentiful around the lower Colorado, are swarming like blackbirds this winter. It would be no trouble at all for a good shot to kill 300 a day on the big lake below Calexico were there any excuse for such slaughter, or any manner in which he could dispose of the birds. Sprigs, widgeon, spoonbills, mallards, teal, gadwall, are all reported plentiful. On the shallow mud sloughs around Calexico an unusual number of gadwall have been seen feeding, and they are fully up to the traditions of the breed as regards fatness.

The general invitation to local sportsmen, given by the Brawley ranchers recently was quite generally accepted, and many limit bags of birds have been shipped up to Los Angeles local dealers. It is said to be a hard game on a man's morals, as the temptation to break the limit is ever present, and in most alluring form.

In some of the Brawley-Imperial country the making of a big bag is rather difficult. There is so much water everywhere that the ducks are scattered, and one or two shots is all a man can get, the hunt-

ing being a matter of "jumping" birds by walking about, which becomes arduous when one has fifteen or twenty fat sprigs bumping about in his game sack.

For Los Angeles sportsmen the duck hunting is holding out splendidly, and, although it is well into December, the good shots are getting the limit with regularity even when not first choice. Last winter it was harder to bag twenty than it is to get fifty nowadays.

The Ballona clubs are still bringing them down as of yore, although surroundings are not what they once were in that section. On the Cerritos and Pasadena clubs limits were bagged Wednesday of last week by several gunners. The Pasadena Club recently put in several new ponds, and is getting rather more than its share of mallards on some of these.

R. E. Ross has kept track of his bag on the Cerritos Club this season, and finds that to date he has killed an even fifty mallards in perhaps 350 birds. Most of the Cerritos membership have passed up the festive "spooney" this fall, though on some of the other clubs he is in dire danger on every appearance.

Getting the limit in the Bolsa section has become an old story. Wednesday of last week the usual number of fifty bird bags were loaded onto the 3:30 o'clock car at Bolsa Beach from half a dozen clubs. Godfrey Fritz, William Frick, J. Morrison and another Christopher Club member fired over that preserve in the morning, and found the flight quite all that could be asked, all kinds of birds being in evidence.

The Chico members are killing quite a few mallards, and some canvasbacks are occasionally seen speeding over the ponds. The prevailing depth of water in the Bolsa clubs is about one foot, which is too shallow to appeal to the festive "can," though it is quite the thing for such bottom rakers as the sprig, which enjoys standing on its head and grubbing about for the grain or seeds that have sunk to the mud. Mallards are fond enough of this character of living, and divide with gadwall the honor of being at present the biggest birds on the Bolsa marshes. Some gadwall of huge size have been reported, one being said to have dressed over two and a half pounds, and as big as an average mallard.

The birds are attaining their winter plumage now, and are fast becoming things of beauty. Earlier in the season the immature males are of soberer color,

and do not make nearly as pretty a string as now.

Teal continue plentiful everywhere. There is no losing the spoonbill; he comes early and stays until the last.

On such of the clubs as have patches of black peat bog, snipe are beginning to make their appearance. The elusive "jack" is one of the few birds that will tempt a duck hunter out of his blind in lulls of the flight. As yet no bags of much consequence have been reported, but several gentlemen have succeeded in bringing down enough of them to furnish the meat for very pleasing breakfasts when served upon toast done to a golden brown.

Quail are steadily becoming harder to catch. Not many are being killed, and the hunters are beginning to realize that under present conditions the birds "have it on them."

New clubs in the Bolsa district are coming along handsomely. The Sunset Club hopes to get in a little shooting late in the season, with good luck; its levees are contracted to be finished within a month, and three weeks more should fill the ponds.

The Canvasback Club's levees are now practically up and a good flow of water has been uncovered in its ten-inch well. Blinds are being built, and a contract for the house lot, which makes it quite probable the members will be shooting by the first of the year.

Last Saturday's shoot of the Bolsa clubs resulted in a number of big bags being made, a "Santa Ana" of phenomenal force keeping the birds moving briskly all morning, and preventing them from sitting out on the ocean as is their habit when bombarded beyond endurance inland.

The storm is reported one of the worst known in many months and quite a number of poorly constructed gun club levees were washed out by the waves raised in their ponds.

Teal were unusually plentiful, and made up a goodly proportion of the limit bags that were scored on the Chico, Lomita and Blue Wing Clubs, all of which reported a great shoot.

M. F. Amestoy and brother both killed the limit on the Lomita. M. F. did not leave Los Angeles until that morning. Four limits were scored, but shooting in the wind was a new experience to many of the members, and the shell average per bird ran high

in consequence. Gadwall were seen in force, and some huge ones were killed.

Demise of a Naturalist.

"The Quails of the United States," which appeared in previous issues was the last work of Professor Sylvester D. Judd, an assistant in the Bureau of Biological Survey, United States Department of Agriculture.

Professor Judd had been in poor health for several months and just prior to his death he had been released from a hospital in Baltimore, after a course of treatment for melancholia. He committed suicide by hanging at his country home near Baltimore.

A Sportsman's Edition.

We take pleasure in noting that an esteemed contemporary across the Atlantic. The Christmas number of the "Shooting Times" appears in an attractive green cover, and its contents are as varied and exciting as any enthusiastic Nimrod can desire. All the articles are contributed by practical shooting men, anglers and naturalists, who know what they are writing about, and the illustrations, which are very numerous and well executed, have all been supplied by sporting artists. Amongst the many articles we notice: "Through Calm and Storm," "On the Irish Coast," "A Christmas Wolf-shoot," "Wildfowling Within an Hour of London," "Wildfowling Grounds Anew," "A Corner in Cats," "Bog-trotting in Ireland," "A Lesson in Camping-out," "A Prehistoric Angling Match," "Early Morning on the Saltings," "Thymallus the Tantaliser," "A Professional Punt-gunner and His Work," "The Evening Flight," "The Windhurst Shooting Party," "Sea-fishing with Rod and Line," "A Wild Goose Chase," "Keepers' Night Dogs," "An Eventful Day on the Shore," "A Boating Incident," "Cliven, the Nature-lover," "A July Day on a Northern Stream," "A Tale of Two Woodcock," "Smuggling Yarns Told to a Wildfowler," "A 'Fresher' or 'Spate' in the Vaal River," "Rough Shooting on a Small Island," "Don't," etc., etc. The price of the publication is 6d. (post free, 8d.), and the publishing office is at 72-76 Temple chambers, London, E. C.

Jackson's Napa Soda does not tangle the feet.

STOCK ITEMS.

Owing to the large pastures required to raise stock, the home of the stockman may be a little remote from others. But with the telephone, good horses, good books and papers, good music, and good friends, the cattleman and his family is a little world to himself.

Good teams are now bringing good money. The best draft horses at the fair were easily worth \$800 a pair. It certainly would pay to raise such teams as that. Mules also were held at fancy prices.

To hasten the growth of young cattle they should have a pen, especially for themselves, into which feed may be put adapted to their time of life. That, with the mother's milk, will give them a fine start.

Careful training in every step tells as much in an animal as it does in a child. In some respects we are only animals. Extra care, a little later, may do both in the case of the boy and the animal, but it is not as good as if it was given at just the right time.

Wool growing does not take any fertility from the soil. While it grows, the sheep are making the soil better.

While sheep are supposed to be very economical feeders, they need good pasture in order to make good flocks.

No definite rules can be laid down for feeding stock. Animals vary. Every one needs to use his feed and his judgment. Daily exercise and grooming are of great value. Idle horses should be allowed to stroll around every day.

Stock of all kinds are not as hardy as might be supposed. When it gets a real setback, it is hard to recuperate. A stunted calf, or colt, is a serious proposition. It pays much better not to let them get into that condition, but to keep them thrifty.

In winter it is better for unworked horses to go barefooted. If left to stand in the stable their legs should be rubbed every day, otherwise they will swell and get wind galls. It is easy to prevent them, but it is difficult to get them off, and to keep rid of them.

As much importance needs to be attached to the mastication of food by animals, as by man. Digestion begins in the mouth, so that the teeth need to be in good condition. When the teeth and other conditions are favorable, it is easy to keep them in good flesh. When the teeth are bad they will not thrive, however much food they may have.

While a good cow may contain all in feed and water and salt and care, the elements, she may be so neglected that she may do no better than a scrub.

FARM LESS AND MAKE MORE.

Some men go on the theory that if farming is a paying business and a good thing, more of it will pay better and will be a better thing. If a man could do a lot and do it as well as he can do the right amount, there would be no reason why this theory wouldn't stand the hard knocks of practice; but no man can hire work done as well as he can do it himself; that is, farm work. And here is where the over-reaching farmer falls down.

Of all farms in the United States those paying best per acre are the forty and eighty-acre farms. It is true that there are some instances that almost anyone can cite where the 200, 300 and 400-acre farm is paying the best, but we speak of farming as a whole—of the average farm in the United States.

We know of no better advice right now than that of a far-seeing farmer of fifty years ago who said: "The man who gets hold of only what lands he can farm and farm with his own hands, is going to be the contented and prosperous man of the future; get this much and leave the rest for the other fellow." It is an oft-repeated sentence, but real farming, real producing in the Southwest hasn't been reached yet. Men who are, year in and year out, farming more than they can farm well are responsible for the low general average of all farm crops per acre. Do only what you can do well and leave the rest for the other fellow, instead of hiring him to do it for you.

CHICKEN CHATTER.

Turkeys are splendid insect exterminators. It pays to keep them on the farm.

Young hens should not be set after their first laying of eggs. By the time they want to set the second time they will make good mothers.

Give the poultry charcoal occasionally. It will assist in grinding the food and aid digestion.

The best breed for you is the one you like best of those most suited to your locality and market.

Where excess of corn is fed or where chickens can get no animal food it means indigestion and starvation.

It is estimated that if farmers would discard the scrubs and use only pure breeds, there would be an increase of one hundred per cent in poultry value.

A superfluous male is a waste of feed and labor. One vigorous male to ten hens is sufficient for fertility. For eggs alone in small flocks, dispense with the male entirely.

Peach and plum-trees are both less liable to disease when grown in the poultry yard. They will make a better growth and at the same time afford a good shade for the poultry.

To have hens put on flesh or lay more or less in winter they must have a warm place and be fed liberally on food which contains gluten (albuminoids) and fat. It should be varied and mixed with some coarse kinds.

Poultry if properly managed will enlarge the income of those who have room and properly care for them, besides proving a healthy addition to the food supply of the table.

While a bird defective in comb or otherwise imperfect, bred from good stock, is really worth more to the practical farmer than his appearance may indicate, at the same time it is hardly wise to sell such poultry for breeders.

There is no better food for hens as an occasional change than sorghum seed. And one of the best ways of feeding it is hanging it up just where the fowls can reach it by jumping up, as by this means both food and exercise are permitted.

One advantage in culling out the flock seasonably early is the saving of feed. From this time on the poultry should be fed regularly daily, and the feeding of useless fowls adds largely to the expense, and the sooner they are gotten rid of the better.

In nearly all cases the flesh of fowls that have been well fed all through their growth will be much juicier and richer in flavor than those fattened from a low condition and crammed just before killing in order to make them heavier.

Wheat is one of the best grains for poultry and especially for the laying hens and is well liked by all fowls. It is rich in material for growth and stimulates the egg-production, while it seems easy of digestion. If too much of it is given suddenly, it sometimes sets up a diarrhoea.

There is no doubt but that some breeders ask fancy prices for their stock—it is really more than it is worth. Yet a real first class animal that will produce first class results as a breeder, and that has a good quiet disposition is almost invaluable. It is difficult to pay too high a price for him. He will bring larger returns on the investment than any other animal on the place. The first cost may be a little strenuous, but it will pay in satisfactory results.

Those who have fed cattle know their piggish nature. Each cow should have her own stall, trough and manger, and each should be required to occupy their stall every time. It will prevent confusion and the liability to the spread of disease.

Good temper, like sunshine, is indispensable to the healthy growth of dairy cows and dairy work.

Read what Hon. James Wilson, secretary of agriculture, says about the hen—that farm bird which is more or less neglected and returns over 100 per cent profit on its keep: "The farmer's hen is becoming a worthy companion to his cow. The annual production of eggs is now a score of billions, and, after supplying the needs of factories, tanneries, bakeries and other trades, they are becoming a substitute for high-priced meats, besides entering more generally into the everyday food of the people. Poultry products have now climbed to a place of more than half a billion dollars in value; and so the farmer's hen competes with wheat for precedence."

Too many in buying do not exercise enough care in selecting only good cows. Dairy points are always more or less conspicuous in every cow. These should be studied by the careful buyer. However perfect they may be, and whatever may be the qualities, they will all fail without feed and care.

It is not the polish on the outside of the can that prepares it for the milk on the inside.

No better use can be made of separator milk than to feed it to calves, hogs and chickens. It is poor economy to sell it off the farm. In separated milk the fat only has been removed, and it contains as much valuable food, which is easily supplied by feeding corn.

A poor cow cannot be made to give much milk, without a large amount of food. Too much is necessary to sustain the cow, and only that which is not thus consumed goes to the production of milk. Poor cows, therefore, are seldom profitable.

Some very fine stock have very undesirable dispositions. And some which have not so much high-grade blood are better in disposition. This might also be said of people.

Ill temper is a disease and should not be permitted to become chronic. It will decrease the flow of milk.

Rubber has many useful places in the dairy business, but the rubber conscience should never be used.

Before persons abuse the cow, they should stop and consider whether they can really afford to do so.

A herd of Jerseys may be handled so quickly that it can scarcely be known that they are on the place.

Sponges—S. Adderley, 307 Market St.

FEEDING FOR EGGS.

In feeding for egg production a valuable lesson may be learned from nature. It will be observed that our domestic fowls that receive the least care and attention, or in other words, whose conditions approach more nearly the natural conditions, lay most of their eggs in the springtime. It is our duty, then, as feeders, to note the conditions surrounding these fowls at that time. The weather is warm, they have an abundance of green food, more or less grain, many insects, and plenty of exercise and fresh air. Then, if we are to feed for egg production, we will endeavor to make it spring time all the year round; not only to provide a warm place for our fowls and give them a proper proportion of green food, grain and meat, but also to provide pure air and plenty of exercise.

Farmers who keep only small flocks of hens, chiefly to provide eggs for the family, frequently make a mistake in feeding too much corn. It has been clearly proven, by experiment, that corn should not form a very large proportion of the grain ration for laying hens; it is too fattening, especially for hens kept in close confinement. Until the past few years corn has been considered the universal poultry food of America. This, no doubt has been largely brought about by its cheapness and wide distribution.

When comfortable quarters are provided for, the nutritive ration of the food should be about 1.5; that is, one part of protein or muscle-producing compounds to four parts of carbohydrates or heat and fat producing compounds. Wheat is to be preferred to corn. Oats make an excellent food and, perhaps, come nearer the ideal than any other single grain, particularly if the hull can be removed.

Buckwheat, like wheat, has too wide a nutritive ratio if fed alone, and produces a white flesh and light-colored yolk if fed in very large quantities. In forcing fowls for egg production, as in forcing animals for large yields of milk, it is found best to make up a ration of many kinds of grain. This invariably gives better results than one or two kinds of grain, although the nutritive ratio of the ration may be about the same. It has been found by experience that the fowls not only relish their ration when composed of many kinds of grain, but that a somewhat larger percentage of the whole ration is digested than when it is composed of fewer ingredients. It has been clearly proven, by experiment, that food consumed by fowls influences the flavor of the egg; that in extreme cases not only is the flavor of the food imparted to the eggs, but also the odor. This of itself is sufficient reason for always supplying wholesome food and nothing but wholesome food.

It is conceded by the majority of the poultrymen that ground or soft food should form a part of the daily ration. As the digestive organs contain the least amount of food in the morning, it is desirable to feed the soft food then as it will be digested and assimilated quicker than whole grain. A mixture of equal parts, by weight, of corn and oats, ground, added to an equal weight of wheat bran and fine middlings, makes a good morning food, if mixed with milk or water, and thoroughly wet, without being made sloppy. If the mixture is inclined to be sticky, the proportion of bran should be increased. A little linseed meal will improve the mixture, particularly for hens, during the moulting period, or for chickens when they are growing feathers. If prepared meat scrap or animal meal is to be fed, it should be mixed with this soft feed in proportion of about one pound to twenty-five hens. It will be necessary to feed this food in troughs to avoid soiling before it is consumed.

The grain ration should consist largely of whole wheat, some oats, and perhaps a little cracked corn. This should be scattered in the litter which should always cover the floor of the poultry house. It is necessary to have the floor of the poultry house covered with a litter of some kind to insure cleanliness. Straw, chaff, buckwheat hulls, cut corn stalks, all make excellent litter. The object of scattering the grain in this litter is to give the fowls exercise. All breeds of fowls that are noted for egg production are active, nervous, and like to be continually at work. How to keep them busy is a problem not easily solved. Feeding the grain as described will go a long way

toward providing exercise. If the fowls are fed three times a day they should not be fed all they will eat at noon. Make them find every kernel. At night just before going on the perches, they should have all they will eat up clean. At no time should mature fowls be fed more than they can eat. Keep them always active, always on the lookout for another kernel of grain.

While perhaps not strictly necessary for their existence, some kind of green food is necessary for the greatest production of eggs. Where fowls are kept in pens and yards throughout the year, it is always best to supply some green food. How to supply the best food, most cheaply, each individual must solve largely for himself. During the winter and early spring months, mangel-wurzels, if properly kept, may be fed to good advantage. The fowls relish them and they are easily prepared. As it is not difficult to grow from ten to twenty tons of these roots per acre, their cost is not excessive. In feeding these beets to flocks of hens, a very good practice is to split the root lengthwise with a large knife. The fowls will then be able to pick out all the crisp, fresh food from the exposed surface. These large pieces have the advantage over smaller ones. The smaller pieces when fed from troughs or dishes will be thrown into the litter and soiled more or less before being consumed, and many pieces will become so dirty that they will not, and should not, be eaten. Large pieces cannot be thrown about and remain clear and fresh until consumed.

Clover, during the early spring, is perhaps one of the cheapest and best foods. It is readily eaten when cut fine in a fodder cutter, and furnishes a considerable amount of nitrogen. If clover is frequently mowed fresh food of this kind may be obtained nearly all summer, particularly if the season be a wet one. Should the supply of clover be limited or the season unusually dry, green food may be cheaply and easily grown in the form of Dwarf Essex rape. This should be sown in drills and given the same cultivation as corn or potatoes. When the rape is from eight inches to a foot in height, it may be cut and fed. It furnishes a fresh, crisp food, and is readily eaten. If cut a few inches from the ground, a second and sometimes a third crop will be produced from one seeding. Alfalfa will also furnish an abundance of green food. It must, however, be cut frequently, each cutting being made before the stalks become hard or woody.

A good quality of clover hay, cut fine and steamed, makes an excellent food for laying hens if mixed with soft food.

Cabbages can be grown cheaply in many localities and make an excellent green food so long as they can be kept fresh and crisp. Kale and beet leaves are equally as good and are readily eaten. Sweet apples are also suitable, and, in fact, almost any crisp, fresh, green food can be fed with profit.

The green food, in many instances, may be cut fine and fed with the soft food, but as a rule, it is better to feed separately, during the middle of the day, in such quantities that give the fowls about all they can eat at one time.—Inland Poultry Journal.

DAIRY BREEDS AT ST. LOUIS.

In the course of the articles on the dairy cows in the St. Louis dairy demonstration a comparison has been made between the best fifteen of the Jersey herd and the entire Holstein herd, as there were twenty-five Jerseys and only fifteen Holsteins.

In making that comparison it was found that, while the Holsteins produced 18,081.9 lbs. more milk than the Jerseys, the Jersey milk contained 423.46 lbs. more fat, equivalent to 567 lbs. more butter; and that, furthermore, the feed of the Holsteins cost \$75.44 more than that of the Jerseys; so that the profit of the Jersey herd as butter producers was \$216.18 in 120 days over and above that of the Holsteins, and the profit of the Jerseys as milk producers was \$178.24 over and above that of the Holsteins. It was seen, also, that the Jersey milk contained 1.36 per cent more fat, 0.87 per cent more solids not fat, and 2.2 per cent more total solids than the Holstein milk; that it took 7 2-5 pounds more Holstein milk to make a pound of butter than it required of Jersey milk, and that each pound of Holstein butter cost 3½ cents more in feed than did a pound of Jersey butter.

A similar comparison may be made between the Holstein herd and the lowest fifteen cards in the Jersey herd, throwing entirely out of consideration the ten leading Jersey cows. The lowest fifteen Jerseys, averaging 72 days from calving at the start of the test, gave 71,428.6 pounds milk, against 96,175.3 pounds milk in the case of the Holsteins, an excess of 24,746 pounds in favor of the Holsteins. But this large quantity of milk did not contain very much more fat than the Jersey milk did. 3298.44 pounds against 3256.63 pounds in the Jersey milk, 81 pounds in favor of the Holsteins. When the amount of butter equivalent to this fat is computed, however, the Jerseys take the first place, their butter being 3832.43 pounds, against 3817 pounds for the Holsteins, a difference of 15.43 pounds in favor of the Jersey.

The cost of feed consumed was \$423.36 in the case of the Jerseys and \$515.7 in that of the Holsteins, the feed of the Jerseys costing \$92.34 less than that of the other breed. The purpose of the demonstration was the economic production of butter-fat, butter and milk for all purposes of dairying, and in this event the fifteen lowest Jerseys proved their superiority, their net profit as butter producers being \$534.75, against \$438.55 for the Holsteins, and as milk producers \$740.75, against \$702.75 for the Holsteins. So that, had the ten leading Jerseys been absent, those left would still have carried off the victory in the contest, owing to their excess net profit of \$96.20 on butter and \$38 on milk.

The best single day's yield of butter for any cow in the Jersey herd was 3.71 pounds, and the lowest was 2.35 pounds. Had the standing of the cows been determined by their best day's yields of butter, the first and second in order of merit would still have maintained their places, but the others would be changed considerably, the sixth becoming fifteenth and the eleventh becoming third, etc. The best seven days' yield of butter was 20.85 pounds and the lowest was 14.52 pounds. Had the standing of the cows depended on their best week's yields, the leading cow, Loretta D., would still have retained her place, as also would the last two cows in order of merit; the third cow would take second place and the second third. The standard of seven cows in the twenty-five would not be changed. The places of the remaining eighteen would be changed from one to four grades each, the average being less than two places. This may throw some light on the reliability of a short period test in determining the quality of a cow.

The Jerseys cost \$5.48 per cow less to feed than did the Holsteins, and they exceed the Holsteins as profitable butter makers by \$10.29 per head and the Brown Swiss by \$16.39 per head. The Jerseys surpassed the Holsteins in quantity of butter by 19.2 pounds per head. As butter producers the Jerseys returned a profit of 137 per cent and the Brown Swiss 70 per cent. As profitable milk producers the Jerseys surpassed the Holsteins by \$7.06 per head, the Brown Swiss by \$15.22 per head, and the Shorthorns by \$23.73 per head. The Jersey milk was 13.5 per cent solids; the Holstein milk, 11.3 per cent; the Brown Swiss milk, 12.5 per cent; the Shorthorn milk, 12.2 per cent. It took 18.2 pounds of Jersey milk, 23.6 pounds of Brown Swiss milk and 25.2 pounds of Holstein milk to make one pound of butter. The cost in feed of a pound of Jersey butter was 10.56c., of Holstein butter 13.51c., and of Brown Swiss butter 14.67c. The Shorthorns were not entered in the butter class.

R. M. Gow.

THE BACON HOG.

Breakfast bacon is cut from the side of the hog, and is prepared by salting the pork and then smoking.

The bacon hog should be long in body, deep in side, with comparatively narrow back, narrow and light, muscular neck. He should show indications of having firm flesh, be well covered with lean meat or muscle, and not have an excess of fat on the outside of the carcass. The fat should be evenly distributed over the entire carcass. The weight of the animal should be from 160 to 220 pounds.

To be in good condition a bacon hog must have a development of lean meat or muscle, with the proper amount of fat. He must be smooth, well developed and have a large proportion of edible meat, while the proportion of

fat and other offal must be small. Hams, shoulders, jowls, and neck, must also be small in proportion to length and depth of side.

It may be thought that the production of bacon is possible only with certain breeds of swine and that these breeds will always produce bacon under all circumstances. While this is true in a general way, it is not always true. It is the feed and the mode of life that produces the bacon hog and that enables him to retain his form as such after he has been developed.

The bacon-hog type of the United States differs considerably from the English bacon hog, which has recently been introduced into the United States and is rapidly establishing for itself a market class. There is, however, a growing tendency toward the typical bacon type.

There is a demand on the markets of this country from foreign countries, and more largely from our own country, for bacon, and there being few bacon hogs to supply the demand, the trade is supplied from the lighter hogs of the fat or lard hog type. This bacon, however, does not command so high a price on the market as does bacon from typical bacon hogs. The former weigh from 155 to 195 pounds, and range in age from 6 to 8 months. They are simply hogs selected from the light hogs in general that conform as nearly as possible to the bacon type. They are not very fat, have fairly good development of muscle or lean meat, and are as long and deep inside as is possible to obtain them.—Government Bulletin.

BEEF VERSUS DAIRY TYPE.

The Iowa station has recently reported the results of a year's feeding test to determine the relative economy for beef production of the beef and dairy types of cattle, a question which is receiving much attention at the present time. The results attained are summarized as follows:

Dairy type steers show a considerable higher percentage of offal and a lower dressing percentage.

Dairy type steers carry higher percentage of valuable cuts.

Beef type steers furnish heavier, thicker cuts; they are more evenly and neatly covered with outside fat, show superior marbling in flesh, are of a clearer white color in fat, and a brighter red in the lean meat; but there is little difference in fineness of grain.

The low price paid for dairy steers may be due partially to prejudice, and to the greater expense of carrying and selling the lower grade carcasses; but it is chiefly due to an actual inferiority in the carcasses.

It is neither profitable nor desirable to feed steers of dairy type for beef purposes. They are unsatisfactory to the consumer because they do not furnish thick and well marbled cuts; they are unsatisfactory to the butcher because they furnish a low grade carcasses which are difficult to dispose of, and they are decidedly unsatisfactory to the feeder, because they yield him little or no profit, and both breeder and feeder waste their time in producing such a type of steer for beef purposes.

Warranted to Give Satisfaction.

Gombault's
Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. If send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O.

PREPARING FOR MARKET.

After the turkeys are grown and ready for market, quite as much care and attention should be given to the killing and shipping as to the proper growing. Where these things can not be done to good advantage, it is better to sell them alive. Buyers who are prepared to kill, dress, pack, and ship turkeys, and to save the feathers, should be in position to pay what they are worth alive; and should be able to handle them at a profit, better than can the grower, who may not be prepared to do the work to advantage. So much depends upon marketing them in the best condition that small growers should either dress and sell to their home market or, provided it can be done at a fair price, sell alive to someone who makes a business of handling such stock.

Kill nothing but well fattened stock. It seldom pays to send ill-favored stock into market. Do not give any food to the turkeys for twenty-four hours prior to killing. This allows the crop and entrails to become empty and avoids much danger of spoiling. Full crops and entrails count against value; they often taint the meat and prevent its being kept for any length of time.

There are two methods of killing largely used. The most popular is to suspend the fowl by the shanks, head down, and cut or stick it in the roof of the mouth with a knife made especially for the purpose. The knife is pushed into the roof of the mouth, causing insensibility and a free flow of blood from the mouth. This is called sticking in the roof of the mouth.

The other plan is to break the neck by a quick twist or jerk backward. When the neck is completely disjoined the head is pulled away so as to form an open space in the neck in which the blood may settle. This plan has been but little used, though the claim is made that when so killed the fowls will keep longer because there is no opening by which the air can get into the body, as there is when they are stuck in the roof of the mouth.

Dry picking is always to be preferred when preparing the fowls for market. When in fine condition, nicely plucked, and sent to market without having been packed in ice, a turkey is at its best, consequently commands the highest price. As soon as the fowl is stuck and the blood is still flowing, pluck the feathers dry from its body, taking care in doing it not to break the skin or tear the flesh. Nothing detracts so much from dressed poultry as torn places upon the carcass or shank, plucking must be clean and nicely done. When the fowl is plucked hang it head down in a cool place until all animal heat is gone from the body, being careful not to hang it where it will be so exposed to cold air as to be likely to freeze. Do not remove the head, feet, or entrails, but have the whole, including head and feet, perfectly clean.

The method known as scalding and plucking is too familiar to need comment further than to say that care must be taken not to scald or tear the skin or shank. Perform this operation as neatly as possible. As soon as the animal heat has left the body, the appearance of the dressed turkeys may be improved by submerging for a short time in cold water, as this has a tendency to make them plump, whether dry picked or scalded. The plucking should be done as quickly as possible; the more quickly done, the more rapidly can the feathers be removed.

For shipping, pack as closely as possible into close boxes or barrels, nicely lined with white or manila paper; do not use brown, soiled or printed paper. Have the package completely filled so as to prevent the poultry from shifting in transit; do not use hay or straw for packing, as it marks or stains the fowls and detracts from their value. The above method can only be used when the poultry is sent to market without being packed in ice, and when this can be done in safety, either in refrigerator cars or for a short distance in cold weather, it is by far the best. The greater part, however, must be packed in ice. When necessary to do this, use nice clean barrels. Cover the bottom with broken ice; then put in a layer of poultry, then a layer of ice; continue thus until the barrel is full. Always use perfectly clean ice for packing. Head the barrel eighty and mark its contents plainly on the head, and never ship mixed lots of poultry in the same package if it can be avoided.—T. F. McGren.

Tuttle's Elixir

Well nigh infallible cure for colic, curb, splint, spavin and other common horse ailments. Our long-time standing offer of

FOR SALE OR LEASE.

Two Prince Airlie Stallions.

PORTOLA 37413, a handsome golden bay, 7 years old, 16 hands, weighs 1190 lbs.
MENLO BOY 37401, a magnificent brown with white points, 6 years old, 16.1 hands, weighs 1200 lbs.

These two horses are full brothers, being sired by Prince Airlie 28045; he by Guy Wilkes 2:15½, sire of Fred Khol 2:07½, Hulda 2:08½, Seymour Wilkes 2:08½; first dam Signal by Del Sur 2:24 second dam Lady Signal 2:35½ by Signal 3337. Both of these horses are very fast for the amount of work, being only a few months last year, showing quarters around :34 and :35. For further information apply to P. H. MCEVOY, Menlo Park, Cal.

GOOD THREE-YEAR-OLD FOR SALE.

FRANK COVEY, BROWN COLT BY MENDOCINO (sire of Monte Carlo 2:07½, etc., etc.); dam Rose Kinney (dam of Almaden, 2-y., 2:22½); 2d dam Bee by Forrest Clay 1931; 3d dam Lovella by Almont Lightning 1023; 4th dam by Imp Yorkshire. A very handsome colt, stands 16 hands and weighs 1100 lbs.; absolutely sound and well broken. With road work only has trotted quarters in 41 seconds, and with training promises to be a race horse. He was bred by Charles A. Durfee and, as will be seen by his pedigree is a half brother to Almaden, the great two-year-old. He is eligible to registration, and will make some one a great horse whether for the track, road or as a sire. He has a good disposition and is a high-class young horse in every respect. For price and further particulars address DR. A. DE FOE, 618 South Fifth St., San Jose, Cal.

Fine Pasturage.

THOMPSON'S SALE AND TRAINING STABLES
PLEASANTON RACE TRACK

One of the Best Equipped Training Stables in California.

Owners desiring to have horses handled and put in condition for sale or racing are invited to correspond with the undersigned

JAS THOMPSON, Pleasanton, Cal.

Three-Legged Horses

are not curiosities by any means. The country is full of them. The fourth leg is there all right but it is not worth anything because of a curb, splint, spavin or other like bunch. You can cure the horse of any of these ailments and put another sound leg under him by the use of

Quinn's Ointment.

It is time tried and reliable. When a horse is cured with Quinn's Ointment the story is told. Mr. E. F. Burke of Springfield, Mo., writes as follows: "I have been using Quinn's Ointment for several years and have effected many marvelous cures; it will go deeper and cause less pain than any blister I ever used. Thought it my duty for the benefit of horse-owners to recommend your Ointment. I am never without it." This is the general verdict by all who give Quinn's Ointment a trial. For curbs, splints, spavins, windpuffs, and all bunches it is unequalled. Price \$1 per bottle at all druggists or sent by mail. Send for circulars, testimonials, etc. W. B. Eddy & Co., Whitehall, N. Y.

McKinney Mares and Stallions
FOR SALE.

Three Black Mares by McKinney 2:11½

One Brown or Black Weanling Filly by Lecco 2:09½

The Mares are BESSIE D., that is out of Stemwinder, the dam of Directum 2:05½; ROSE McKINNEY, that is out of a mare by Forrest Clay 1934 and is the dam of Almaden (2) 2:22½, winner of Breeders Futurity and Occident Stake; RAGSY, that is out of Babe by Ferdinand 1835, son of Strathmore.

The Weanling is by Lecco 2:09½ and out of Rose McKinney. Also one three-year-old Stallion—the best bred one ever sired by McKinney; dam Elaine (dam of 5 in list) by Gen. Benton; second dam Elaine (dam of 4 in list) by Messenger Duroc; third dam Green Mountain Maid (dam of 8 in list) by Harry Clay 45. A grand young horse; has trotted a half in 1:14 as a two-year-old.

Will sell one or all of the above at fair prices. Address C. A. DURFEE, 529 Thirty first St., Oakland. Or Race Track San Jose, where horses may be seen at any time.

TWO HIGH-CLASS STALLIONS
For Sale at a Bargain.

JOHN A. 2:12 3-4 (8), pacer, sired by Wayland W.; dam Lady Moor by The Grand Moor. Has paced miles in 2:08½ and can do it again when in condition. He has some very fine looking colts, yearlings and two year-olds. JOHN A. is a good individual, a high-class race horse, and will make a great sire of race horses and high-class roadsters.

SIR CARLTON 2:36 3/4, trotter, three years old, by Nutwood Wilkes; dam Lady Keating by Stam B; second dam Abbie Woodnut (dam of Diawood and Abidine) by Nutwood.

These horses will do to race the coming season and will win in their classes. It is imperative that I sell them without delay, as my business calls me elsewhere and I will be unable to give them attention. For reasons stated I will sell both of them for less than I would have taken for one of them some time ago, and I would like to hear from some of the parties whose offers were not accepted, and believe we can make a trade. Apply to or address A. E. MASTIN, 1016 Nineteenth Street, Sacramento, Cal.

IT MAKES NO DIFFERENCE

what particular kind of shooting you are interested in—sportsmen differ as to make of guns, advantages of various loads etc., but sooner or later most of them come to the same opinion about ammunition—that

Peters Shells and Cartridges

have all the other makes beaten in the race for quality and results. See what they have recently accomplished in the three chief departments of "the game":

RIFLE

At Sea Girt, N. J., Aug. 24-Sept. 9, LIEUT. TEWES won the Wimbledon Cup Match, the Grand Luffin & Rand Aggregate, the Seabury and N. J. Members' Matches; LIEUT. CASEY won the Inspector's Match, and LIEUT. SMITH the Reading Match—all using Peters 30 U. S. Govt. ammunition. In the Spencer and Seabury Matches LIEUT. CASEY made a total of 20 consecutive bull's-eyes. In the Wimbledon Match seven of the first ten places were won with Peters Cartridges.

PISTOL

The Pistol Championship of the United States, competed for Sept. 1-11, was won by J. A. DIETZ of New York scoring 465 out of a possible 500 with Peters 22 Stevens Pope Army Cartridges. Standard American Target, 8-in. Bull's-eye, distance 50 yards. At Sea Girt, N. J., Aug. 24-Sept. 9, THOMAS ANDERTON won the All-Comers, Any Revolver, and Jones Matches, and LIEUT. STEDE the Disappearing Target Match, all with Peters Cartridges.

SHOTGUN

The Consolation Handicap at the Grand American, June 30, was won by JAS. T. ATKINSON, score 99 out of 100, using Peters Ideal Shells. First Amateur Average at the Cincinnati Tournament, Sept. 19-21, won by R. S. RHODES, using Peters Shells. First General Average at the Indianapolis Tournament, October 9-10, won by L. H. REID with the phenomenal score of 392 out of 400, using Peters Factory Loads.

THESE RECORDS SPEAK FOR THEMSELVES. COMMENT IS UNNECESSARY.

CHRISTMAS 1905

HORSEMEN

Should Remember

That they can winter their strings in better condition at the Stables of the Track at

Hotel Del Monte, Del Monte, Cal.

A resort by the Sea where it is summer all the year. The Track is being put in special shape for Winter Racing and Training. Horses may be shipped here from any point in the East, and special terms and accommodations will be arranged for them and for their trainers and keepers.

There is no Winter Resort in the world like Del Monte, and owners of racing stock may not only give their horses the best possible opportunities to be in perfect condition for spring and summer, but they may themselves enjoy, together with their families, the luxuries and comforts of the great hotel close at hand.

The eighteen-hole Golf Links are the finest in America, with greens that are green every day in the year. Excellent Shooting and Fishing, and oiled roads for Automobiling.

For terms, etc., address

HEALD'S

BUSINESS COLLEGE

Highest Award, Gold Medal, Portland Fair

This sign has been up more than 42 years. It is familiar in every household in California. It is a veritable trade mark, and represents the very best in the field for which it speaks. Thousands of successful business men look upon it as a familiar friend, for through it they got their start in the business world. It represents more today than it ever did before, for HEALD'S BUSINESS COLLEGE is better today than ever. Every year adds to its experience, its strength, its prestige, its equipment, its usefulness and its popularity. The demand for its graduates is growing every year.

A graduate says: "That this school is recognized as being of the greatest efficiency was impressed upon my mind when applying for a position as the only recommendation necessary was the fact that I was a Heald's graduate."

OUR EMPLOYMENT DEPARTMENT HAS FILLED 514 POSITIONS
in 11 months, including Bookkeepers, Stenographers, Electricians and Electrical Engineers, Assayers, Telegraph Operators and Draughtsmen.

Get your business education where the business opportunities are.

A poor school is dear at any price. A good school is cheap at any price.

By Kingward 2:25, son of the great Onward, sire of 9 in 2:10; dam Lemonade (dam of Bessie Wilton 2:09¼, Petigru 2:10½ and Lady Wilton 2:11½, the three fastest trotters ever produced by one mare) by Kentucky Prince, Jr.; second dam Susie Melbourne (dam of two and granddam of six standard performers) by Melbourne, Jr.; third dam Kate (in great brood mare list) by Alhoit, son of Abdallah 15, etc. Petigru stands 16.1 and weighs 1175 pounds. He has shown his ability this year to trot a mile in 2:05 and all of his get show speed and high quality.

Will Make the Season of 1906 at Agricultural Park, LOS ANGELES.

Address

Fee \$50.

W. G. DURFEE, Box 96, University P. O., Los Angeles, Cal.

POLE STAR 5 years old

By McKinney, dam Mountain Hare by Young Venture; second dam by Nigger Baby; third dam by Imp. Trustee.

Will Stand at ALAMEDA RACE TRACK.

Address or Apply to

\$40 for the Season.

PAT FOLEY, Race Track, Alameda, Cal.

Return Privilege.

PRINCE NUTWOOD 2:12¼

Black stallion, 16½ hands high and weighs 1250 pounds. Winner of the three-year-old pace at San Jose in 1894, a race that took six heats to decide; was never behind the money and was the fastest stallion in three-year-old races that year. Sired by Dexter Prince, one of the 17 greatest sires, dam Luella by Nutwood, one of the greatest sires, the dam of Prince Nutwood 2:12¼ and Myrtle 2:13½, the champion three-year-old trotter of 1891, and granddam of Robizola 2:12¼, also own sister to Daisy Nutwood, the dam of Consuella S. 2:07¾, and granddam of Eva Direct 2:20½.

Will make the season of 1906 at the

R. R. BREEDING FARM, One Mile North of MODESTO.

Fee \$40 for the Season.

F. HANEY, Modesto, Cal.

PETER J.

FIVE-YEAR-OLD STALLION

By Stam B., four years old, 2:11¼ (sire of Swift B., three years old, 2:16¼, etc.), dam McDonald Maid (dam of Stella 2:15½; Billy Nichols, three years old, trial 2:18; Peter J., three-year-old trial with only six weeks work, 2:27; Gold Bow 2:35 without training); second dam Lady Patchen, by Geo. M. Patchen 30; third dam Allen Maid by Ethan Allen (43). Peter J. is a handsome bay stallion 16.1 hands, weighs 1100 pounds; foaled May 12, 1901; is a fine individual in every respect, and as a three-year-old easily trotted quarters in thirty-three seconds.

Season of 1906, Jan. 20 to May 1st, at Agricultural Park, Sacramento.

Fee \$25 for Season. Usual return privilege. Address

S. U. MITCHELL, 2130 H Street, Sacramento, Cal.

ROBERT DIRECT

By Direct 2:05½ (sire of Directum Kelly 2:08¼ and Direct View 2:08¾, besides the pacers Directly 2:03¼, Direct Hal 2:04¼, Bonnie Direct 2:05¼, King Direct 2:05½, Prince Direct 2:05½, Trilby Direct 2:08¼ and Rey Direct 2:10); dam Daisy Basler by Robert Basler 2:20; second dam Richmond by Pasha 2039, etc.

Will make the season of 1906 at the E. O. Newmans Ranch,

10 miles northeast of Visalia.

Fee \$50 for the Season.

For further particulars address

E. O. NEWMAN, Visalia, Cal.

SEYMOUR WILKES Reg. No. 0232.

Race Record 2:08½. The Fastest Son of Guy Wilkes 2:15¼. And the most uniform sire of size, solid color, good looks and natural speed in California. Will make the season of 1906 at

CY WHITE RANCH, Lakeville, Cal.

Address THOS. ROCHE, Lakeville, Cal.

Or J. W. Gregory, 408 Bush St., S. F., Cal.

Terms for the Season, \$30.

STAR POINTER 1:59¼. WORLD'S CHAMPION RACE HORSE

World's Record made in 1897. The fastest, gamest and most consistent race horse in turf history. Registered Trotting No. 30183. Pacing No. 0411.

Sire of Morning Star 2:03, Joe Pointer 2:05¼, Sidney Pointer 2:07¼, Schley Pointer 2:08¼.

By Brown Hal 2:12½, sire of Star Pointer 1:59¼ and 10 others with records of 2:10 and better. Dam Sweepstakes, dam of Star Pointer 1:59¼, Hal Pointer 2:04, Elastic Pointer 2:06¼, etc., and 2 Producing Sons and 6 Producing Daughters.

Season 1906 at PLEASANTON. Service Fee \$100.

Usual Return Privileges.

For Further Particulars Address

CHAS. De RYDER, Pleasanton, Cal.

STONEWAY 0340. Record 2:22¾

Son of Strathway and the great brood mare Elizabeth Basler. Stoneway is the sire of Stonelita (3) 2:15, Rockaway (2) 2:15¼, My Way (3) 2:22, trial 2:11, Little George (1) half mile record 1:17, Radium (1) half mile record 1:16. Jake Broliar, trainer for the Kirkman Stock Farm, declares that he will prove Stoneway the greatest sire of extreme speed in California.

Season of 1906 at the KIRKMAN STOCK FARM, Northeast of Visalia.

Fee \$40 for the Season.

Address GEO. W. KIRKMAN, Owner, Exeter, Cal.

SCOTT McKINNEY 33719 MCKINNEY TROTTING STALLION

Sire McKinney 2:11¼, dam Primrose by Sidney 2:19¾. Primrose is the dam of Royal Sid (3) 2:24½, Diagonal (4) trial 2:15, Owyne, three-year-old, was in Philippen's stable one month and trotted a mile in 2:31, last half in 1:13, and Scott McKinney as a three-year-old was driven by Durfee three times in the spring and trotted a mile in 2:35, last half in 1:14. Only 6 of Scott McKinney's colts have been broken and 5 of them have trotted quarters in 40 seconds; another was booked up 4 times to a bike cart and trotted quarters handily in 39 seconds; one in Salinas trotted quarters in 39½ seconds; a three-year-old trotted a mile in 2:52, eighths in 17½ seconds, and a three-year-old worked a month trotted a mile in 2:45. All have size, finish, and are pure gaited trotters. Scott McKinney will be given a record when races are held here.

Will make the Season of 1906 at the SAN JOSE RACE TRACK.

For particulars address

Fee for Season \$40, with return privileges.

H. SCOTT, SAN JOSE, CAL.

Stevens Creek Road, near Meridian Road.

TOM SMITH 2:13¼

Sired by the great McKinney 2:11¼—greatest sire of his age; dam the great brood mare Daisy S. (dam of three in list), by McDonald Chief 3582, son of Clark Chief 89; second dam Fanny Rose—great brood mare (dam of two with records better than 2:18), by Ethan Allen Jr. 2993.

Will make the Season of 1906 at WOODLAND RACE TRACK

To a limited number of approved mares.

Fee \$50, with usual return privilege.

Address C. A. SPENCER, Woodland, Cal.

E. P. HEALD, Owner, 24 Post St., San Francisco, Cal.

UNIMAK McKinney—Director—Nutwood.

Unimak, standard and registered trotting stallion, is by McKinney 2:11¼, dam Twenty-Third by Director 2:17; second dam Nettie Nutwood (dam of Hillsdale 2:15¼), by Nutwood 600.

Will make the Season of 1906 at PALO ALTO, CAL.

Terms \$40 for the Season. To close July 1st. Approved mares only. Usual return privileges or money refunded, at the option of owner of mare.

Excellent Pasturage at Reasonable Rates. No barbed wire. Best of care taken of mares in any manner owners may desire. Address or apply to

CAPT. C. H. WILLIAMS, Box 151, Palo Alto, Cal.

WAYLAND W. 22516. Record 2:12½.

ONE OF LEADING SIRE OF 2:10 PERFORMERS OF 1905.

Sire of Bolivar 2:06¼, leading money earning pacer of season 1905. Sire of Morosco 2:12, highest class trotter on California circuit in 1904. Wayland W. is by Arthur Wilkes 2:28, dam Lettie (dam of Wayland W. 2:12½, Welcome 2:10½, Maud Singleton 2:28) by Wayland Forrest. Although Wayland W. has never been mated with mares by Electioneer, Director, Nutwood, Sultan, Stamboul, Anteeo or any of our great sires, he is the sire of Bolivar 2:06¼, Nellie R. 2:10, Arthur W. 2:11½, Morosco 2:12, John A. 2:12¾, Forrest W. 2:14¼, Leland W. 2:16, Al Sandy 2:19¼, Maud Sears 2:21, Bonita Wilkes 2:26¼. Wayland W. will make the

Season of 1906 at SANTA ROSA, at McGregor & Hockins' Stables.

W. C. HELMAN, Owner.

Terms \$40 for the Season. Pasture \$3.00 per month.

ZOLOCK 2:05¼

Sire of R. Ambush (3) 2:14¼, Delilah (3) 2:14½, Bystander (4) 2:14¾, Sherlock Holmes 2:15¼, Dixie S. 2:27.

Brown stallion by McKinney 2:11¼; sire of 11 in 2:10 list; dam Gazelle 2:11½, dam of Zolock 2:05¼, and Zephyr 2:11, by Gossiper 2:14¾; sire of Gazelle 2:11½, Miss Jessie 2:13¾, etc.; second dam Gipsy (dam of Gazelle 2:11½, Ed. Winship 2:15, etc.), by Gen. Booth. A larger advertisement of this horse will be published in this paper later.

Will make the Season of 1906 at Agricultural Park, Los Angeles.

Fee \$50. Address

HENRY DELANEY, University Post Office, Cal.

ZOMBRO 2:11

The best son of the champion McKinney 2:11¼.

Dam by Almont Lightning. Sire of Zephyr 2:07¼, Charley T. 2:13¼, Italia 2:14½, Bellemont (3) 2:15¾, etc. Has eleven in standard lists, or more than all other sons of McKinney combined. 7 are in 2:20 list, 3 in 2:15 list, and 1 in 2:10 list. A great race horse. A grand individual and a great sire. Winner of first prize at Lewis & Clark Exposition. Address

San Francisco, Saturday, December 23, 1905

THE YEAR JUST CLOSING may not have been the most profitable one that all harness horse breeders have enjoyed, but after looking it over carefully few will be able to find reasons sufficient to make them lose heart in the future. Well bred trotters and pacers of quality are in demand at good prices, and the market has a very firm condition. The big auctions in New York, Chicago, Lexington and other points have been very remarkable for the quality of horses offered rather than for the quality. We believe more horses have passed under the hammer this year than in any previous twelve months, yet prices have been sustained to the very last, and the demand is still strong. When eleven hundred horses can be sold at one sale for an average of over \$400 each, there is no reason to believe that the supply is anywhere near the demand for good ones. Racing in the eastern and middle states has been excellent this year, in spite of several drawbacks. The time has averaged faster than ever and more new 2:10 performers have appeared than any previous year has produced. Here in California the harness racing has been very limited, but it has been high class, and clean. The trotting and pacing at Santa Rosa, Fresno, Sacramento and Los Angeles has been up to the best that is held anywhere in the world so far as close contests and clean racing is concerned. California farmers, stock breeders and fruit growers have had a fairly prosperous season, while mining has enjoyed a boom and real estate sales were never so numerous, nor prices higher. Several new railroads are planning to enter our State, new factories are being established, and every citizen is looking forward with confidence to times of great prosperity for many years to come. The breeders of harness horses, those who are producing the best on up-to-date lines, will share in this prosperity beyond a doubt. The future of California is most bright and there is no reason why there should be even one pessimist among California horsemen. With the wish that every reader of this journal may enjoy the best in health and wealth that this glorious land affords, we extend to all the compliments of the season, a Merry Christmas and a Happy New Year.

PUBLICATION OF THE LISTS of new standard performers for 1905 is deferred until after the meeting at Phoenix, Arizona, which opens on Monday, December 25th. So many California bred horses will take part in these races with a probability of lowering their records that the lists of new performers will necessarily be incomplete until the returns are in from Phoenix.

There are six mares that divide the honor of having produced two trotters with records of 2:10 or better. They are: Beulah by Harold (dam of Beuzetta (4) 2:06¾ and Early Bird 2:10), Cascarilla 2:25½ by Shelby Chief (dam of Caspian 2:07¾ and Caracalla 2:10; Nell by Estill Eric (dam of Belle Vara 2:08¾ and Tom Axworthy (4) 2:08¾); Lucy Homer by Homer (dam of Authoresse 2:09¼, Lecco 2:09¾; Caprara by Daniel Lambert (dam of Dandy Jim 2:09¾ and John Mac 2:09¾), and Emma T. 2:17½ by Socrates (dam of Miss Adbell (3) 2:09¾ and Emma Brooks 2:09¾). Of these, Beulah was the youngest mare to have two in 2:10, she being but 14 years old when her second trotter came into the select circle. Emma T. comes next, being 18 years old. She, however, holds the honor of having the fastest record. Third on the list comes Caprara, who was 25 when she got her second 2:10 trotter. Cascarilla comes next, being 26 years old, and old Nell comes last, she being aged 27 years when her second trotter got in.

OWNS FINE RACING STABLE.

Twelve or fourteen years ago W. A. Clark, now Senator from the State of Montana, and known as one of the wealthiest mining and railroad operators in the world, campaigned a string of horses on the Grand Circuit. He owned the fast pacer Major Wonder 2:09¾, Faust 2:18½, Conde 2:19¼ and other good money winners. Both Gil and Jack Curry drove for him at different times, and Mr. Jeffries, father of Charley Jeffries, also piloted winners on different occasions for the copper magnate. Senator Clark retired from the turf as an owner years ago, but his son, W. A. Clark Jr., is becoming one of the prominent owners whose horses are seen on the Grand Circuit. Mr. Clark has been an ardent lover of the light harness horse for years, is an excellent amateur driver and has demonstrated the fact that he is an excellent judge of a horse by his purchases. He has raced through the Colorado and Montana circuits for several years past, and in 1904 concluded that he would enjoy seeing his horses starting for the big prizes on the Grand Circuit. He saw Chas. Marvin's great colt Bon Voyage by Expedition and bought him for \$10,000 as a two year old. The colt won the two year old trotting divisions of the Horse Review and Kentucky futurities, closing the season with a record of 2:15, the best for a two year old trotter in 1904. He was wintered in California and is at the close of 1905 the fastest three year old trotting colt of the year with a record of 2:12¾.

The winnings of Bon Voyage in 1904 were \$5,450, and this year he won \$11,075. He is beyond question one of the grandest looking three year olds living, as well as one of the best bred ones. His sire is Expedition 2:15¾ by Electioneer, his dam the great brood mare Bon Mot, dam also of Endow 2:14¾ and Bequeath 2:20¼.

Ted Hayes, the well known trainer and reinsman who was for several years with Bitter Root Farm, campaigned Mr. Clark's horses in 1904, and went east with them this year, but was compelled to give

MR. W. A. CLARK JR.

up training on account of illness, and the horses were raced thereafter by J. O. Gerrity with excellent success. The racing string of Mr. Clark is now at Los Angeles track in charge of Mr. Gerrity, and comprises Bon Voyage 2:12¾, Marone 2:13¾, a very high class trotter; Sally Lunn, two year old record 2:28, trial this year 2:15; Electric Maiden, a mare from whom great things are expected, and the fast pacing mare Miss Georgie 2:10¾, by McKinney out of a Nutwood Wilkes mare. Miss Georgie was timed separately in 2:06½ this year, but was not right during the early part of the season.

Mr. Clark has quite a number of brood mares, all of which are now quartered at Pleasanton in charge of Ted Hayes. Among them are the following: Hazel Wilkes by Guy Wilkes, Loucil May by Oakland Baron, She by Abbotsford, Ruth Mary by Directum, Gay Leaf by Telephone, Patty D. by Altinas, Biddy by Re-Election, Douschka by Western, Reina Del Diablo by Diablo, Christobel by Chas. Derby, Bon Mot by Erin.

Mr. Clark also owns the stallion Highland, that is a very high class horse and a fast trotter. He is by Expresso, own brother to the great mare Expressive, three year old record 2:12½, and out of the great brood mare Alpha 2:23½ by Alcantara.

Highland will be bred to some of these choice mares and will make a public season at the Pleasanton track. He gives promise of being a great sire. The only one of his get at the present time is a chestnut filly out of Reina Del Diablo. She is a handsome little thing and was seven months old on the 21st of this month. She has only been in harness five times and the fifth time she was hooked up she showed Mr. Hayes an eighth in 25 seconds. As before stated, this is Highland's only foal and if she is a sample of what he is going to get he will be a wonderful sire.

Among the others in Mr. Hayes' string is a two year old by McKinney, dam Tuna 2:12½, that showed a half in 36 seconds, and a black two year old by McKinney, dam She, that can step better than a 40 gait; a yearling chestnut filly by Nutwood Wilkes, dam Patty D. 2:12¾, that has paced quarters better

than 38, and a yearling bay filly by Nutwood Wilkes out of She, that can easily show close to a 40 gait.

Kinney Wilkes, a young stallion coming five years old, by McKinney out of that great race mare Hazel Wilkes 2:11¼ by Guy Wilkes, is another young stallion that Mr. Clark will use in the stud some and probably race.

All of Mr. Clark's breeding interests are at the present time in charge of Mr. Hayes at Pleasanton. It is probable that Mr. Clark will, as soon as he finds a place to suit him, purchase a place where he will establish a breeding farm in California.

In all probability Bon Voyage, after making a short season at Los Angeles, will finish the season at Pleasanton, where he will be bred to Mr. Clark's choice mares and be allowed to make a limited public season.

The advent of such men as Mr. Clark into the breeding of trotters cannot help but be of benefit to the State. He has the means to buy, and the inclination to breed none but the best, and every lover of the harness horse will wish him nothing but success and good luck in his venture.

MATINEE RACING AT PHOENIX.

I enclose herewith score card for our matinee given yesterday, on the occasion of opening our new fair grounds and racing plant to the public. This was our first matinee of the season, and it was a most enjoyable affair—in fact, I do not think a more enjoyable, or a more thoroughly appreciated matinee was ever given anywhere. The weather was perfect, and something over 3,000 people attended, and all were very enthusiastic over the fast time and close finishes made in almost every heat. There was no hitch of any kind in the program, and our management was the recipient of many nice compliments on the character of the matinee, and the great results obtained in the building of such a fine plant and such excellent tracks in such a short time.

That the track is pretty fast was evidenced by the ease with which Hazel Patch and Custer paced the last half of the first heat in the third race in 1:02½, last quarter in 30¼ seconds. Mr. Sherman told me that if the horse and conditions continue good till race day, he thinks he can reduce Hazel's mark of 2:02¾ here. He says ours is unquestionably the best and fastest new track he ever saw, and he believes it the equal of any in the world. He says, further, that he considers our general plant the equal of any in the country; and the other trainers here all agree with him in both these statements. So we feel well satisfied that the result of our free-for-all pace will be to set our track record pretty low at our first meeting. The visiting trainers say the only thing they see wrong about our climate is the fact it is so fine they don't see how they can resist the temptation to train their horses too much.

One thing that seemed to attract as much favorable comment from spectators as any other, was the neat appearance of the grooms, who all wore white coats and caps furnished by the Association. The general comment which this feature brought out would seem to indicate that the general public don't enjoy the spectacle of a horse walking past the stand covered with an expensive blanket, while his groom too often is covered with only a dirty undershirt and pair of trousers without any suspenders.

Commissioner Packard goes to Los Angeles tonight to arrange for rounding up the boys and looking after transportation matters for them, and we expect several carloads of horses from there next week.

Yours very truly,

W. V. TIFFANY, Secretary.

Summaries.

First race, pacing:
Sally Pointer by Sky Pointer..... 1 1
Selden Wilkes by Gen. Wilkes..... 4 2
Fearnot by Lynmont 2 4
Florence Wilton by Wilton..... 3 3
Time—2:10, 2:09¼.

Second race, pacing:
Paul D. Kelly (2) by Armont..... 1 1
Lillian Zolock by Zolock..... 2 2
Billy A. by Fast Nation..... 3 3
Monkey Mack by Oak Grove..... 4 4
Time—2:14¾, 2:14¾.

Third race, pacing:
Hazel Patch by Hard Patch..... 1 1
Custer by Sidney Dillon..... 2 2
Time—2:11¼, 2:08¾.

Fourth race, trotting:
Borah's Brother by Boreal..... 1 1
Billy H. by Knight 3 2
Peggy Arnett by Sidney Arnett..... 2 3
Maud M. by Gen. Wilkes..... 4 4
Time—2:23, 2:21.

Fifth race, pacing:
Hallena Morgan by Due Hal..... 1 1
Pointer Star by Vasto 3 2
Surprise by Silkwood 2 3
Cobre Grande by Tobasco 4 4
Time—2:17, 2:17.

Craft's Distemper and Cough Cure is attracting much attention among horsemen at this season of the year. All parties interested will do well to read the announcement of the manufacturers, Wells Medicine Co., 13 Third street, Lafayette, Ind., which appears in this issue. Hock masters and dog owners are also urged to try this remedy for all germ diseases. Druggists and others may order it under the guarantee: "Money refunded if it fails." D. E. Newell, 519 Mission street, San Francisco, is general agent for the Pacific Coast.

LEADING HORSEMEN PLEASED WITH IT.

Jackson's Napa Soda untangles the feet.

IN FRONT ALL HIS LIFE.

Ever since Zombro 2:11 came out as a three year old and raced up and down the Pacific Coast, meeting the best three year olds in the country and beating them, winning forty heats that year in better than 2:30, something no other three year old trotter ever accomplished before or since, he has been a leader. Placed in the stud, his first few years of stud duty were short and limited, as he was in training and raced part of the time, but he began siring speed from the first and was not only the first producing son of McKinney, but has sired more standard performers than all the other sons of that great horse combined, and has also sired the fastest. Besides being a recognized leader as a race horse and sire, Zombro is a great show horse, and has won more first prizes than any stallion in California. He won first premium at the Horse Show in San Francisco in 1895 in the three year old class. He won first premium at the California State Fair in 1900 and 1903, and at the Oregon

ZOMBRO 2:11 BY MCKINNEY 2:11½

State Fair in 1901, and 1902. He won the gold medal for best standard bred stallion with five of his get at Sacramento in 1903. At the Pasadena Horse Show last April he was awarded first prize and a \$75 loving cup for the best standard bred stallion. At the Lewis and Clark Exposition at Portland, where a great horse show was held this year, Zombro won the first prize, the champion prize and the grand champion prize, with six high class stallions to beat.

Zombro has but 76 foals that are four years old or over, and out of these but forty have been worked. Fifteen of them have stepped miles in 2:15 or better, and twenty-two have trotted or paced in 2:20 or better. Over one-half of those worked have shown 2:20 or better. This is a great showing for a young sire that has so few colts. There were ten foals by Zombro in 1897, eleven in 1898, thirteen in 1899, thirty-two in 1900, and only ten in 1901. Every one of these has

other filly, Helen Dare, that has a trial of 2:15, last half in 1:05. She is owned by Mr. Beckers, owner of her sire.

Zombro is the leading money winning sire of the Coast this year. His daughter Zephyr won over \$8000 on the Grand Circuit, although very lame all season, and then sold for \$1600, although veterinarians said she would probably never race again. Trainer Ruth-erford, who raced Helen Norte 2:09 on the Grand Circuit, said he saw Zephyr step the last three quarters of a heat in 1:32, and the last half in 1:00½. She made two breaks going round the first turn, and then

GENERAL J. B. FRISBIE, A HANDSOME SON OF MCKINNEY

trotted the last half in one minute and half a second, and then came very near beating Sadie Mae for the heat, Stinson going to the bat to win.

Charley T. 2:13½, a five year old by Zombro, was the biggest money winner on the California circuit this year that started in purse races. Briquette, a five year old daughter of Zombro, showed a mile in 2:13½ and sold for \$5000. The get of Zombro have probably sold for more money on the average during the past few years than the get of any other sire. Zombro's list of standard performers now number eleven, and is as follows: Zephyr 2:07¼, timed separately in a race in 2:06½; Charley T. 2:13½, trial 2:10½; Italia 2:14½, over half mile track, trial 2:08½; Bellemont, three years old, record 2:15¾, trial 2:11¾; Zomboyette 2:18, trial 2:14¾; Zenobia 2:19, trial half in 1:05½; Tee Dee Cee 2:19½, trial 2:13½; Lady Zombro 2:24, trial 2:10; Lord Kitchener 2:24½, trial

sire.

Zombro is now located at a splendid new home which his owner, Geo. T. Beckers, has built for him. Mr. Beckers bred this great horse and gave him his first lessons, but that is another story and an interesting one, the relation of which must be deferred to another time. Owners of mares who are desirous of breeding to the best should correspond with Mr. Beckers. His address is 4645 Agricultural avenue, Los Angeles.

Jackson's Napa Soda does not tangle the feet.

ONE OF THE VERY BEST.

As handsomely and perfectly proportioned as any trotting bred horse on the Pacific Coast is the young stallion Gen. J. B. Frisbie, bred and owned by Mr. Thos. Smith of Vallejo, a gentleman who has been identified with the horse breeding interests of California for many years, and whose efforts have always been to produce horses that have size, courage, endurance and kind disposition. Mr. Smith has not been what one would call an extensive breeder, as quality instead of quantity has been his motto, but the Year Books show that he has bred many winners and trotters with low records. Being a progressive breeder it is not strange that the fine, young black stallion which he has placed at the head of his stud should be the handsomest and most promising of any he has heretofore bred. A glance at his likeness, which appears herewith will show what a grandly proportioned, smoothly turned, stylish individual he is, and his looks are backed up by the very best blood lines, he being a full brother to Tom Smith 2:13¼. His sire is McKinney 2:11¼ sire of no less than forty in the 2:15 list, and his dam is the great brood mare, Daisy S., dam of Tom Smith 2:13¼, Gen. Vallejo 2:20¼, Little Mac (3) 2:27 and Sweet Rosie 2:28¼. Daisy S. is a daughter of McDonald Chief 3583, that sire of five standard performers, among them that well known trotter, Columbus S. 2:17, and has a producing son and three producing daughters. McDonald Chief was by that stout bred horse Clark Chief 89 and out of a mare by thoroughbred Bethune. The second dam of Gen. J. B. Frisbie is another great brood mare, Fanny Rose by Ethan Allen Jr. 2903, son of the old champion Ethan Allen and a mare by Hambletonian 2. Fanny Rose produced George Washington 2:16¾, Columbus S. 2:17 and Solano Chief 2:29¼. The third dam of Gen. Frisbie is Jenny Lind, a mare known to be nearly thoroughbred but whose pedigree was lost. Her dam was imported to this State from Kentucky before the war, and was purchased there for a race mare. She was bred to a thoroughbred stallion before starting on the trip and foaled a filly after reaching California. She became the property of a negro who forgot or lost all trace of her pedigree, but the filly was trained and raced here and won several good races, among others defeating when a two-year-old in a match race a filly belonging to the late Nathan Coombs of Napa. Jenny Lind produced the pacer Prince Allen 2:27, one of the fastest pacers of early harness racing here in California.

Gen. J. B. Frisbie is standard and registered. He will make the season of 1906 at the stable of his owner, Thos. Smith, at Vallejo, and will be limited to a few approved mares at \$25 for the season. Good pasturage for mares can be furnished at \$3 per month. This young horse is a fast trotter, as the public will find out when he is raced. The opportunity to breed mares to a son of the great McKinney whose first, second and third dams were all producers, and two of them in the Great Blood Mare Table, is seldom offered at the figure fixed for the fee of this horse by his owner, and when the individuality and speed of the stallion are taken into consideration it is one that surely will be taken advantage of early, and Mr. Smith will undoubtedly be compelled to close his books soon.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

ZEPHYR 2:07¼, BY ZOMBRO, WON OVER \$8,000 THIS SEASON ON THE GRAND CIRCUIT

good looks and is a fine driver. No horse ever sired colts with more intelligence or that made better roadsters and race horses. Now as to his two and three year olds, they all show speed. There are a dozen two year olds that have shown quarters in 35 seconds, and the three year olds are showing speed like old horses. Look at Bellemont 2:15¾, the three year old filly that holds the coast trotting record of her age and sex, and that trotted a trial mile last month in 2:11¾ and sold at auction for \$2500. There is an-

2:19½; Zealous 2:26½, trial 2:20; Nina Bonita 2:27.

Those that have no records but have shown trials better than 2:20 are Bessie Barnes 2:07½, Colonel Green 2:10½, Briquette 2:13, Clara B. 2:14, Julia M. 2:13½, Helen Dare 2:15, Mayo 2:15, Mabel W. 2:16½, Zombretta 2:15, Edmond S. 2:15, Era 2:16, Suomi 2:16, Zomalta 2:16½, Oosola 2:17, Early Bird 2:18 and Geraldine 2:19.

All the above trials are well authenticated and they certainly make a wonderful showing for Zombro as a

A ROYALLY BRED TWO-YEAR-OLD.

Few men that have devoted a part of their time to the theoretical study of breeding the trotting horse and at the same time had a deep practical knowledge of the business, ever met with greater success, considering the number of horses bred, than the late Hon. W. E. Greene, Judge of the Superior Court of Alameda county, whose death a few months ago ended the earthly career of one of California's most honored and respected citizens. Judge Greene was a lover of trotting horses and bred them for the pleasure it afforded him as a relaxation from the arduous duties of the bench, to which he actually devoted too much of his time. The writer well remembers a conversation held in 1902 with Judge Greene, in which he remarked: "I intend sending my filly Diavolo by Diablo 2:09½ to Zombro this year, as I believe a foal from that mating will trot fast, and if a colt prove an excellent sire." When the foal arrived it was a colt, which is now two years old and gives every promise of fulfilling the expectation of his lamented breeder. The colt is now owned by Mr. W. J. Dingee, the well known capitalist of this city, who was a warm personal friend of Judge Greene, and interested with the latter in the breeding of trotters. The colt has been named Edward McGary and, as the picture shows, is a very handsomely proportioned trotter. The reputation of his sire, Zombro 2:11, is established, both as a race horse and a sire. Diavolo is a young and untried filly, but has great natural speed. Her sire, Diablo 2:09½, is one of California's great speed sires and one of the best bred horses living. The second dam of this colt is Lilly Langtry, a great brood mare

EDWARD MCGARY BY ZOMBRO 2:11

VIRGINIA DILLON BY SIDNEY DILLON

CALIFORNIA'S FAMOUS HAY.

Hay production in California is entirely different from that in almost every other State. In the east there are but few kinds of hay, the principal staple article being timothy, and it is much the same in all sections and can be graded, as there is a uniformity about it wherever you find it.

In California, however, one farmer may raise wheat hay, his neighbor red oat hay, another barley or barley and oat mixed, or wheat and oat mixed, while still another will have volunteer wild oat hay. Then one will have a first class article and his neighbor an inferior article, location and climatic conditions having much to do with the production of good hay.

The man whose product brings the fancy price is generally the one who makes a close study of it, watches results and year after year improves on his methods. In California there is practically no danger of rain spoiling the hay, excepting volunteer wild oat hay, which is cut so early that it sometimes gets a shower, but wheat, wheat and oat, red oat, barley or barley and oat are generally safe.

The methods generally followed in the larger and most successful hay districts are to cut the hay quickly, irrespective of kind, running from two to a half dozen mowing machines if necessary. In a few hours follow with rake, and after curing a little in the winrow, put it into shock. Then in fifteen or twenty days stack it, and bale any time after it has been in stack thirty days.

One of the great essentials is to get a bright green color. Many of our most successful haymakers cut when the straw is right, irrespective of the condition of the grain in the head. Very frequently there is no grain at all in the head, but the straw is one bright, crispy, uniform green in color, very sweet, and stock eat every particle of it and do well.

At one time it was considered here in California that hay was not first class without grain in the head, and everything else was sacrificed to attain that result. This was particularly so with growers of wheat and red oat hay, but it is not so now. Color is the one great quality desired to get a good selling article, and properly colored and cured hay commands the largest price.

The two great hay producing sections of California are the Livermore Valley and the Hollister section. In both these locations climatic conditions are most favorable. The country about Stockton is also coming to the front as a large producer, but Hollister is the largest shipping point in the State, and this section produces one-fifth of the State's supply. It has the largest hay warehouses in the world, the plant covering 37½ acres. The four warehouses of this plant would extend over a quarter of a mile if placed end to end, and they hold 16,500 tons. Hollister station ships an average of 2700 carloads of hay annually, some years even more.

The eastern trade is supplied principally from the Livermore and Hollister districts. This is a growing demand and was created in a very simple way. Owing

to the mild winters in California many eastern racing stables winter their horses here, and at first brought their fancy timothy hay with them. But in training their horses on the same tracks where our California trainers were feeding California hay it soon became very evident that our horses had more spirit, more

entered in \$40,000 worth of stakes much interest will be taken in his development and progress by others than his owner.

At Mr. Dingee's home, near Redwood City, which, by the way, is one of the most beautiful country seats on the whole Pacific Slope, he has collected a small band of brood mares, eight or ten in all, and will enjoy seeing them raise foals that will be expected to develop speed when they are sent to the trainer's hands. There is now at Dingee Park, as this beautiful home is called, a filly by Sidney Dillon out of the good race mare Flora M. 2:16 by Richards Elector that bears the pretty name of Virginia Dillon. She is, as her picture shows, about as perfect a yearling as could be pictured in one's mind's eye and great things are expected of her.

nia, order large quantities of Hollister hay and the demand is increasing annually.

R. P. LATHROP.

The lot of Chinese horses and mules is not a happy one. The Chinese cart is a peculiar affair, and appears to be of much the same type as in ancient days. The ordinary passenger cart is dragged by one animal in the towns and by two in the country. The country cart employed for hauling produce, and also for domestic purposes by the great bulk of population, is a machine of phenomenal weight. The wheel of one of them was found to weigh 177 pounds, and the axle fifty-seven pounds in addition, giving a total of 411 pounds for the wheels alone. The shafts are stout, as they need to be, and if the cart upsets, a by no means infrequent occurrence, they pin the shaft animal to the ground. To these farm carts, mules, horses, cows and donkeys are hitched by means of ropes fastened to the axles, and to make these beasts pull together is a task to which no Occidental would aspire. When the British troops marched on Peking in 1860 these Chinese carters deserted, and the men could do nothing with the teams.—Ex.

Wayne King 2:09½ by Atlantic King is racing in England under the name of Buster Brown.

Jack McKerron, the two year old trotter by John A. McKerron 2:04½, that made a record of 2:23¼ in a winning race over a half mile track this year, was purchased last week at a long price by Mr. Wilson B. Chisholm, a prominent Cleveland patron of the trotting turf, and has been placed in Ben Kenney's charge to train for the rich three year old stakes in which the colt is entered.

Will Durfee has one of the best prospects in California for the green trots next year in a three year old gelding called Zomont by Zombro 2:11, dam Altamont Maid by Altamont. This gelding is owned by Sam Elmore of Astoria, Oregon, and acts like one that can get the money. He stepped the last eighth of a mile the other day in 16¼ seconds very handily.

Belladi 2:19 by Chehalis 2:04¼, owned by Judge Brents of Walla Walla, that was sent east this year in company with his mare Helen Norte 2:09½, to race on the Grand Circuit, was left back there to be bred to Moko, the sire of Fereno 2:05¼, etc.

James Slavin of Denver, Colo., now owns the fast trotting mare Rennsselaer Maid by Rennsselaer Wilkes, dam Proficient by Pilot Medium, second dam by Aleantara, having purchased her from E. P. Burnes of Toledo, O., for \$1500.

Mr. Frank Glover of Crowley, Polk county, Oregon, has lately purchased from A. Glover of Salem a very fine yearling colt sired by Diablo, dam Kate Memo.

Lorenzo (2) 2:31½ by Zombro, that was castrated this fall, is said to be lingering between life and death at Irvington track, Portland.

MR. R. P. LATHROP, MANAGER LATHROP HAY CO.

power and seemed to be better nourished, while they ate their hay up cleaner than did those fed on the imported timothy. Naturally the eastern trainers substituted our California hay for their imported article, and when they returned east there was California hay in the car, and in many instances orders were left for carloads to be shipped to different points where their horses were to race. Soon others learned its value and merit and in this way quite an extensive eastern trade has been built up. Hay is now shipped direct to Chicago, New York, Cincinnati, Lexington and a number of other points, and many of the largest stables of race horses use none but California hay. A great deal of hay is also shipped to Honolulu and to the Philippines, and up and down the Coast.

The San Francisco trade, exclusive of the shippers, consumes about 125,000 tons annually. Oakland is a large consumer, while San Jose, Los Angeles and many interior points, especially in Northern Califor-

TWO SPLENDID MARES.

The most successful breeders are those who pick their matrons with as much care as they do their stallions. While a high class stallion that has a reputation is a very profitable animal to own, he generally represents a heavy investment, if not in money, in time, trouble and hard work. The owner of a few high class mares, however, generally does not have a fortune invested, and the returns he receives on the sale of the produce are larger in proportion to the investment than those of the average stallion owner.

As an investment made with the idea that it will "pay," which is the main idea of every investment nowadays, there is none that presents better opportunities than the purchase of one or both of two mares now owned by Mr. John A. Cole of San Bernardino, President of the San Bernardino Driving Club.

One of these mares is Hazel Kinney 2:09½, the first of the trotters sired by McKinney to enter the exclusive 2:10 list, which she did at Woodland, August 29th, 1900, defeating Phoebe Childers 2:10½ and Iran Alto 2:12½ in three straight heats in 2:09½, 2:10½ and 2:10. In the first heat she trotted the last three-quarters of her mile in 1:33, a 2:04 gait. Hazel Kinney is by McKinney 2:11½, dam Baby's Gift, dam also of the trotter Nina Bonita 2:27, by Christmas 12253, second dam Baby Arthurton, by a son of Arthurton

HAZEL KINNEY 2:09½.

365, third dam Gipsy by California Tenhroeck, thoroughbred. She is a blood bay, full sixteen hands, weighs 1150 pounds, and is a perfect model of the high class trotting mare. No more beautifully gaited animal ever wore harness and there was never one more sound in wind and limb. If put in training again she should lower her record at least three seconds, and sell for three or four times as much as Mr. Cole asks for her now.

The other mare that Mr. Cole offers for sale is the three-year-old brown filly, April Rose, also by McKinney. She was bred at the famous Palo Alto Farm and is a full sister to Mack Rose, the young stallion which Mr. Cole sold for a long price to Geo. S. Newman of Colorado, who recently founded a stock farm twelve miles out of Denver. Mr. Cole states it as his firm opinion, founded on what he has seen her do, that she is the best green three-year-old filly in America to-day. No one that ever saw her move questions her extreme speed. She can step at any time an eighth of a mile in 15 seconds, and last June, with only five months work, trotted a mile in 2:18, and a half in 1:05½. She is pure gaited and never makes a mistake. Her dam, Sweet Rose has a trotting record of 2:25½, made as a yearling, which is close to the world's record of 2:23, held by Adbell. Sweet Rose is by the great sire Electioneer out of the great brood mare, Rosemont by Piedmont 2:17½, second dam the greatest of brood mares, Beautiful Bells, dam of ten in the list, by The Moor, and third dam Minchaha, dam of eight in the list, by Steven's Bald Chief. Mr. Cole very pointedly says that if any one knows of any better bred McKinney than this one he would like to have them say so, as he likes news, and it will be news to him, also if there is any better individual or any faster trotter of her age, considering the length of time she has been training. Any person desirous of knowing anything further of these two McKinney mares should address Mr. John A. Cole at San Bernardino.

HORSEMEN RECOMMEND CAUSTIC BALSAM.

Dallas, Texas, Dec. 6, 1904.

The Lawrence-Williams Co., Cleveland, O.
Your letter at hand and it calls to mind when I got Mr. Greiner to order the first bottle of GOMBAULT'S CAUSTIC BALSAM. Then I got him to handle it, as I spoke so highly of it, after I had used it. I had a talk the other day with a horseman friend of mine, and he asked me which blister I used most. I told him, as I would any one, that GOMBAULT'S CAUSTIC BALSAM was the best I had ever tried, and when I say that I am not throwing any roses.

W. L. JONES.

An equine remedy for curbs, splints, spavins (blood or bone), ligament lameness, etc., which seems to give every one who uses it satisfaction, it Matt Tanner's Spavin Cure. This remedy has been used successfully and is highly recommended by Geo. H. Ketcham, owner of Crescens 2:02½; Geo. Campbell Brown, of Ewell Farm, Tennessee; W. C. Hendrickson, Belle Mead Farm, Bell Mead, N. J.; Henry Exall, Lomo Alto Stock Farm, Dallas, Tex.; W. O. Foote, Dallas, Tex.; Ed. E. Geers, Memphis, Tenn.; and T. R. Gortner, Benedict, N. Y. A veterinary says that he must confess that Tanner's remedy beats all of them. And hundreds of prominent horsemen say the same things. Certainly these gentlemen would not recommend a remedy other than on its merits.

NOTES AND NEWS.

Tom Smith 2:13¼, Prof. E. P. Heald's handsome and fast trotting stallion by McKinney, will make the season of 1906 at Woodland in charge of C. A. Spencer, the well known superintendent of the Woodland Stock Farm. The breeders of Yolo county could not look for a better stallion to breed to next year.

The East View Farm Stable won upwards of \$23,000 last season, the largest amount won by horses belonging to one man.

Charles Whitehead, owner of that good Director stallion Delphi 2:12¼, will again make a season with him at Sallinas in 1906. He writes that the harness horse business is thriving in that section. Everyone seems to want to get another colt like Mr. Iverson's North Star that won everything he was entered in this year. Whitehead has eight of Mr. Iverson's horses in training. North Star has filled out until he looks like a different horse. He will not be raced again until 1907, and Whitehead believes he is a 2:07 trotter three times in a race if there ever was one. Princess 2:13¼ is looking good. Alma, green trotter by Dexter Prince, trotted a trial in 2:24; Rosier, two years old, by Engineer, dam by Guy Wilkes, has trotted a quarter in 41 seconds. She is in the Stithford Stake. Derby Beauty, two years old, trotted a quarter in 40 seconds. She is in the Breeders' and the Occident Stakes. Robineer, a two-year-old by Robin, out of Ivoneer, dam of North Star, paced a quarter in 35¼ seconds. Dictatus Bell, by Dictatus out of the dam of Princess 2:13¼, and Prince Gift 2:12, paced a quarter in 34 seconds. A yearling by Barondale is proving quite a trotter and is entered in all the stakes. Della Derby is in fine shape now, and with no more bad luck will give a good account of herself in the Breeders' and Occident Stake next year. Mr. Whitehead has four of Mr. C. Z. Hebert's horses, Bruno 2:16, a gray mare by Bruno that trotted a mile in 2:21¼ and an eighth in 16 seconds, and is a good prospect to race next season; also two pacers by Hambletonian Wilkes with trials of 2:20¼ and 2:19, respectively, to cart. T. Flint's green pacer stepped a quarter in 32¼ seconds; M. J. Smeltzer's trotter trialed in 2:28 and his pacer in 2:30. Both are by Dictatus. T. Butler's X Ray has been shifted to the pace and looks like as good a pacer as his daddy, Rey Direct 2:10. County Treasurer James Taylor has a good prospect in a full brother to Princess 2:13¼. Mr. Whitehead is also working two very promising colts owned by Mr. Hoyt of Watsonville. Toppy 2:10 will surely race next year and the 2:10 pacers had better look out for him.

Glenale, that took a two year old record of 2:26, worked a mile over the Lexington track this fall in 2:10. This handsome son of Ondale, son of Onward 2:25¼, is owned by J. H. Thayer and Henry Bosworth. Ondale is a young horse but all his get show remarkable speed.

Hazel Patch 2:02¾ has worked a mile in 1:59¼ since his arrival at Phoenix and will race there Christmas week and then return to San Diego, Cal., where he will go against the California track record February 22d, after which he will be given a rest until May 1st, when he will be trained for the free-for-all classes on the Grand Circuit for 1906. Hazel Patch is 35 pounds heavier now than when he went his first race in July and has raced nearly every week since and been shipped 10,000 miles. His legs are as sound and clean as the day he was foaled.

James Thompson of California is not the only trainer that started in the matrimonial stakes this year and won out. An eastern paper states that Joe Gahagan of Toledo was married in Detroit a few days ago to Miss Maud Scott, a handsome and accomplished lady of that city.

It looks as though there would be little doing in Memphis in 1906. An eastern paper states that Murray Howe, who has acted as secretary of the Memphis Trotting Association since the organization, has accepted a position on the advertising staff of the People's Gas Light and Coke Co. of Chicago, one of C. K. G. Billings' western business interests. The Memphis track will remain open for another season at least as a training establishment, and it is hoped that within that time the law prohibiting pool selling, as passed by the last legislature, will be repealed or declared void.

Zibbell & Son have the little horse Adam G. 2:11¼, home at their stable, 672 11th Ave., San Francisco, for the winter, where they expect to keep him and get him in the pink of condition to race next year. Everyone thought him capable of beating 2:10 this year and many who have seen him work think 2:05 won't stop him next year. They have twenty other horses in their stable, which they are preparing for sale or racing. Anyone wanting to buy a good horse will do well to call on them, for they have them from a good road horse up to the great trotter, Adam G.

Walter R. Cox of New Hampshire has purchased at private sale the five-year-old stallion Gracino 2:18¼, which was sold in the Old Glory auction for \$1200. Just how much of an advance Cox paid is not known, but it is said to be a generous one, as the New England trainer thinks well of the black horse and expects that he will be the star of his stable in 1906. Gracino is by Directum and his dam was Miss Lizzie S. by Bow Bells.

Woodland Stock Farm had five three year olds by Nushagak in training this year that could beat 2:30 and three that could beat 2:20. There were only two of his two year olds trained; one of them could have stepped a mile in 2:20 in June and the other was able to trot a mile in 2:30 with a little over three months' work. Nushagak has one five year old and two four year olds out of common mares, therefore his oldest colts out of good mares since the crop Aristo 2:08¼ came from are three year olds. He has but ten colts that are three years old or over entered in stakes, and three of them have started and been winners of either first or second money. This is a remarkably good showing. Prince Ansel, Woodland Stock Farm's other sire, has but three four year olds (his oldest foals). One has been trained and could beat 2:20 as a three year old, and this year as a four year old worked a mile in 2:17, last three quarters in 1:40, last half in 1:05½, last quarter in 31½ seconds, hitched to a cart. Prince Ansel has three three year olds, and but one has been trained; he could beat 2:20 this season. A couple of yearlings by him have been broken and handled a little and both show exceedingly well. Mr. Spencer, superintendent of the farm, says the only two colts by this horse that have been trained are capable of trotting in 2:10 and, barring accidents, he believes they will do so. Prince Ansel was a great two year old, taking a mark of 2:20½, and defeating John A. McKerron 2:04¼ that year. But for the accident in which he went wrong he would have been a 2:10 trotter.

It is reported that the fast trotter McKinley 2:06¼ is being trained at the pace and taking kindly to that way of going, while the pacing stallion Allerson 2:05½ is to be tried at the trot.

Lon McDonald will winter at Andover, Mass., where he will have in charge such well known performers as Glenwood M. 2:07¼, Claymos 2:07¾, Miss Adbell (3) 2:09¾, Swift B. 2:12¼, the fast green trotter Baron Wedgewood, and Sadie Fogg by The Director General, the latter being the three year old filly that beat 2:10 at the Lexington meeting and sold for \$12,500.

The law prohibiting betting on horse races enacted by the last Tennessee legislature went into effect December 1. A few days since a race was run on the Shelbyville, Tenn., track, on which books were made, it being the object of the horsemen there to make a test of the law. The parties in charge of the meeting were promptly arrested by the sheriff and the decision of the courts in the case is being awaited with great interest.

At a recent sale at Philadelphia the trotter Ed Bryan 2:16¼ by Little Corporal, that holds the two and three mile world's record to wagon, was sold to ex-Congressman John E. Reyburn for \$3250. The bidding on the trotter was very animated, starting at \$300, and went in \$100 bids to over \$2000 in a short period. Congressman Reyburn's representative met every advance by a nod of the head nonchalantly. Miles Rigor, owner of Gedney King, got in the game at the \$1500 mark and ran him up to \$2500, then threw up his hands. A Mr. Seyert, said to be a millionaire iron merchant, went to \$2800, and then a New York horseman joined in the game and bid up to \$3225, the Reyburn man still nodding for \$3250 and named Reyburn as the purchaser.

The annual stockholders' meeting of the Kings County Agricultural Association was held last Monday. The financial statement of the secretary shows the association to be in good condition. C. L. Newport, John Hayes, Frank Johnson, M. Bassett, J. M. Daggs, J. W. McCord, H. G. Lacey were elected directors.

An item is going the rounds of the eastern turf papers that Dr. Berthiaume of Providence refused \$10,000 for the three year old Carakina by McKinney 2:11¼, out of Biscara (dam of six by Director 2:17, after he had shown a mile in 2:16¼ to jog cart, over the Woonsocket half mile track, a performance equal to 2:10 over a mile track. This is one of the colts purchased by Dr. Berthiaume last year, bred at Santa Rosa Stock Farm. The other McKinney colt, out of a mare by Ray Rose, is said to be nearly as promising.

Lecco 2:09¾ was shipped from Pleasanton to Macon, Georgia, by Ed Mills. Dan Selsor, the well known caretaker, who has had charge of Lecco since the horse first came to California, went with him, and writes that Lecco shipped through in fine shape.

Nowadays similarity in color and markings is not so much an essential thing in matching horses for a team. The horses must be alike in action, speed, temper and spirit. This is not because of any innate fancy for mismatching pairs in color, but because of the great pleasure and comfort in driving two horses that travel as one. Style, size and speed go with the other considerations. If likeness in color can be obtained, well and good, but those matching horses will not wait on color if other things are right.

Fancy prices are only obtained for fancy horses. If you expect to get the top of the market you must have the best kind of horses to offer.

Work horses are high. A New York brewery has just placed a \$45,000 contract for one hundred head of Percherons.

Locanda 2:02 took a record of 2:16¼ as a three year old, in a race that he won in straight heats at Saugus, Mass., October 8, 1900. The time of the heats was 2:17, 2:16¼, 2:17½.

The tracks that are kept in condition for training generally receive enough patronage to pay for the expense.

The third payment of \$25 in the Occident Stake of 1906 will be due and payable January 1st. If you expect to win the rich Occident Stake at the next State Fair, make this payment without fail, as failure to make it will declare your colt out.

Frank Turner, proprietor of the Santa Rosa Stock Farm, has twenty-six Sidney Dillons, from weanlings to three-year-olds. Every one old enough to be trained can trot or pace a mile in standard time, and several can beat 2:20 away off. It's a great family.

Many owners of good mares in this section would like to see Zombro 2:11 make the season of 1906 somewhere around the bay of San Francisco.

A great prospect for next season's Eastern futurities for three-year-old trotters is the filly Daffodil 2:19¾, by Directly 2:03¾, dam Falfa 2:20 by Allerton 2:09¾. This product of developed sire and dam before going into winter quarters trotted a mile in 2:14¾, the last half covered in 1:05½. She is owned by W. H. Smolinger of Galesburg, Ill., who also owns the good mare Angiola 2:07¾, and has been developed by Oscar Ames.

It looks as though the daughters of Nutwood 2:08¾ may eventually be credited with 300 standard performers. Not less than 258 produced by them have already taken standard records, and many of his daughters are still in the brood mare ranks.

Professor Ridgeway, in his "Origin and Influence of the Thoroughbred Horse," refers to the practice among various peoples of attaching talismans to their horses to ward off ills. The modern Italian fastens a piece of badger's hair or a tooth to his bridle in order to guard the horse against evil. The Greek ties an elaborate amulet about its neck. The Kabyles of Kairfan hang round the necks of their

There are fifteen trotters and pacers that have records from 1:55¼ to 2:02, and five of them, or one-third, trace to the two full brothers Aleyone 2:27, and Alcantara 2:23. Nine of them trace one or more times to George Wilkes 2:22.

Geers will winter Dr. Strong 2:05¾ at Memphis and will probably race him in the Grand Circuit in 1906.

"I thought your horse's name was Bill," "It was but I've changed it to Coal Bill," "Jet black, I suppose?" "Yes, but that isn't the reason I call him Coal Bill. I put him on the scales yesterday, and he lacked 500 pounds of weighing a ton."

As an instance of what the Horse Show does for the dealer, here are a few sales which came under my notice, and there are scores of which I know nothing. Of those I do know, William H. Moore paid \$22,000 for a pony Torchfire and four Hackney mares; \$10,000 for Eloquence and Revenue; \$5,000 for Victory and Victor, and \$5,000 for King George. J. W. Harriman paid \$14,000 for the three saddlers, May Morning, Corinne and Petroleum, and \$3,750 for Mack, the harness horse. G. White of Fairmont, Va., paid \$5,000 for five Hackney mares. Reginald Vanderbilt paid \$3,750 for Miss Foxhall. Edna May and Lotta Faust went for \$7,500, and Little Brown Jug (I am weak on this amount), \$3,000, etc. A nice bouquet for the smart dealers.—Sports of the Times, New York.

One of the get of the champion pacer, Dan Patch 1:55¼, that will probably be raced in her sire's stable next season is the pacing mare Judy Patch, that was given a time record of 2:24¼ this season. She was sent to the home of her sire last spring to be bred to Directum 2:05¼, her owner believing that through bad handling she had become worthless for racing purposes. Trainer H. C. Hersey, who drives Dan Patch, began working the mare in order to give her a standard record, and he found that she worked so cleverly for him that he believes she will be a great race mare. In one race in which she was started to see

The fast record sires are at the front as shown by the new 2:10 trotting list in which the following six represented have records below 2:10: Directum 2:05¼, Bingen 2:06¼, Peter the Great 2:07¼, William Penn 2:07¼, Del Norte 2:08, and Henry F. 2:09¾.

The supposed oldest horse in America, aged fifty-two years, lives three miles from Stanhope, in Hamilton county, Iowa, and is the property of a Scandinavian farmer. Last winter the horse was bereaved by the death of its mate, a horse that died in the full bloom at the age of thirty-two. The horse that has just completed more than half a century of life is in fairly good flesh and is fed on bread baked with an additional ration of sugar each day. It is said that all the signs of great age are present. The coat is, hile bound and has not shed for several years and the muscles have lost their powers to a degree.

Second payment of \$15 will be due and payable January 1st on all foals entered in the Occident Stake for foals of 1904, to be trotted at the California State Fair in 1907. Don't let this payment lapse if you desire to trot your colt in this stake.

A trotter that has attracted the attention of racing men generally is Nut Boy 2:15¼, by Nutprice 2:15½, dam by Smuggler 2:15¾, that raced on the half-mile tracks of the West this year. He started out green last summer, and went some notable races over the half-mile rings. His record is no measure of his speed, for he has trotted a public trial over a half-mile track in 2:11½. Not a few of the men who follow the Grand Circuit are casting longing eyes on him, and the chances are that he will pass into the stable of some Grand Circuit trainer before racing begins next season.

Go where you may in any state in the Union, in city, town or hamlet, you will find one or more interested in breeding the light harness horse. The trotting horse enthusiast is found in all walks of life, and his admirers are not confined to any one class or condition of people, and some of the most sincere lovers of the horse are to be found in the pulpit, on the stage, in the big financial institutions of the country; on the farms, in the stores, shops and factories—in fact, the popularity of the trotting horse extends into every part of American life.

The Vermont Morgan Horse Breeders' Association held a meeting at Middlebury November 23 and 24 at which nearly forty Morgan breeders of Vermont were in attendance, says Horse World. Mr. Rommel of the National Bureau of Animal Industry outlined the proposal of the federal government relative to the establishment of an experimental station at Burlington for the purpose of breeding a type of the Morgan horse that is demanded by American gentlemen. He stated that contracts would be signed the coming week and that work would be commenced immediately. He said it was the government's purpose to ascertain the possibilities of breeding horses in this region and that records would be kept of the breeding experiments, that the department might know just what such experiments give as results. He paid Vermont a splendid compliment in saying it was his personal opinion that outside of Kentucky no handsomer or more finished horses are to be found in this country than here.

He asked for an expression of opinion from those present as to the type of the Morgan that should be bred, and the remarks of the several speakers were unanimous that the demand today is for a type of horse embodying the characteristics of the early Morgan with the same form, endurance and beauty, but a trifle heavier and 15½ hands tall, rather than under that height. If the breeders of Morgans in Vermont keep up the interest in their favorites shown by this meeting and get the aid of government experimental breeding also, the Morgan ought to enjoy a genuine boom a few years hence.

The ponies of Iceland have a natural weakness for animal food, and a noted authority says he has seen ponies making their way to the seashore to feed on fishheads and the like; this in the summer, when there was plenty of good pasture accessible. In some parts of Iceland at least a proportion of the horses are kept through part of the winter in stables near the farms, and those which are so protected are fed very largely at this season on dried cods' heads, which also form the staple food of the cattle when the hay harvest has been a bad one. At some places, too, where the codfish is caught in large numbers, its body, either fresh, or more frequently dry, is given them. This peculiar diet is said to be very nourishing to milch kine, just as dried whale meat is supposed to be in the Faeroes. Naturally, the milk has a peculiar taste, but those who are accustomed to it do not notice it.

The gray pacer Geraldine, that started out green last spring and closed the season with a record of 2:10¼, has just been bought by M. & V. Miller of Oneida, N. Y., and will be fitted for a Grand Circuit campaign next season. He was sired by Girardin 2:21½, son of Pilot Medium, dam by Rochester, the son of Aherdeen, that was bred and made his stud career at the Jewett Farm. Good judges look for Geraldine to pace in 2:07 or better next season.

Nettie King 2:20¼, the daughter of Mambrino King that produced the former trotting champion The Abbot 2:03¾, foaled an own brother to that great trotter a short time since at Hillandale Farm, Mamaro-ueck, the home of the great young sire Bellum 2:13¾, and it is to that horse this greatest of Mambrino King's producing daughters has been bred this season.

A CLOSE FINISH

John Caldwell 2:08½ and Helen Norte 2:09¼ at Los Angeles. Race won by John Caldwell in 2:08½, 2:08½ and 2:11. In the engraving Caldwell, driven by James Thompson, is on the outside.

asses a thick woolen cord (purple and white), to which are attached two triangular amulets covered with purple velvet embroidered with imitation Arabic writing in gold thread, and having a small round button between them. The Coringas of the Madras coast, it may be added, will never allow the shell which they tie about their ponies' necks to be taken off lest the evil the shell is supposed to avert should befall them. It is thought by some authorities that the brass ornaments on the blinkers of our own dray horses may be survivals of similar "protective charms."

Two colt stakes for Solano and Yolo county trotters and pacers will soon be announced to come off over the Dixon track on May Day.

Several years ago the pacer The Spy, by Chimes, out of Ormaid, by Prince Regent 2:16½, showed Geers phenomenal speed, but broke down and never raced. Geers liked him so well that he bought him of Village Farm and placed him in the stud in Tennessee, where it is thought he will prove a remarkable sire of pacers. Three three-year-olds by him are now in Geers' stable at Memphis, and all are said to possess extreme speed. One is a slashing chestnut filly out of Ella Brown 2:11½, dam of Walter Direct 2:05¾.

What are you doing to help organize a California circuit for next year? Are you doing your part to see that a good meeting is held in your county? If not, why not?

The matinee sport has been a great benefit to the big horse auction, as few matinee horses are raced more than one season in the same club. They are then consigned to the auctions.

how she would act she raced like a seasoned campaigner, and was separately timed in 2:13½, and a little later she was worked in 2:10. If she proves to be in foal her foal will be taken away from her and raised on a bottle, so that she may go on and race later in the season. With these two pacers in his stable Hersey thinks he will have an excellent chance to start Dan Patch's 2:05 list with two of his get next year.

Writing of large stallions brings to mind the old hind horse Invincible 2:19¾, by Princeps, dam by Volunteer, owned for fifteen years by Mat Wilcox of Concordia, Kansas, says "Columbus." Invincible is the largest trotter ever looked at by the writer, as in good condition this horse will weigh nearly 1500 pounds. It has been stated to the writer that Invincible weighed 1320 pounds the day he obtained his record. Judging from the size of his feet, this son of Princeps must weigh a ton, and then not be out of proportion. But he was a trotter just the same, and showed a mile in 2:15 while in Charley McDonald's stable.

George Washington, the father of his country, followed racing, and on the Maryland side of the Potomac, opposite his Mount Vernon homestead, there was a race track, where he frequently raced horses. Were it not for racing, the development of the horse would not be what it has become in this country.

We are gratified to announce that the Fasig-Tipton Company will positively give a sale in Cleveland at the Cleveland Sale Mart some time during the month of May.

Prince Direct 2:07, will be at Richmond, Ind., next season.

PACIFIC BREEDERS FUTURITY No. 6.

Pacific Breeders' Futurity No. 6, which is for the foals of mares bred in 1905, has broken the big record of its predecessor, Stake No. 5 received 388 nominations, while No. 6, which closed on the 4th of this month, has a total of 393. Again the mares bred to Budd Doble's great stallion Kinney Lou 2:07½, head the list, nineteen of them having been nominated in the stake. Mares bred to Zombro 2:11 come next, numbering fifteen, while Zolock 2:05¼ is a close third with fourteen of the mares bred to him nominated in the stake. Demonio's mares stand fourth in the list, numbering eleven, and Tom Smith has ten of his mares nominated. Stam B., Highland, Robert Direct, Lynwood W., Strathway and Nutwood Wilkes are represented by nine each; Grecco, Coronado, Wayland W., Hambletonian Wilkes, and Stoneway eight each; Guy Dillon, Bonnie Direct and Bonnie McK., have seven each, while Murray M., Captain Jones, Leeco, Nushagak, Delphi, Count Hannibal and R. Ambush have five each. The list is a long one, but it will pay for perusal by any horseman. The complete list of owners making nominations, with name and sire of mares nominated and name of stallion bred to is here given:

CAPTAIN JONES BY McKINNEY.

There was a trotting mare on the California circuit this year that attracted much attention from horse-men who "know a good thing when they see it." This was the handsome bay mare Lady Jones owned by Mr. J. A. Jones of Springbrook, Oregon. Lady Jones took a record of 2:16½ at Tulare, but this was no measure of her speed as after the racing season was ended it was discovered that she was suffering from corns, which accounted for her repeated breaks and seeming inability to get away fast. With the corns removed she was a different mare and at the end of the season could have trotted very close to 2:10. Lady Jones is a daughter of the stallion Captain Jones whose handsome proportions are shown in the accompanying portrait. He is a son of McKinney 2:11¼ and a great bred one. His dam is Midday Bell by Gossiper 2:14¾, sire of the dam of that other fast McKinney, Zolock 2:05¼. The second dam of Capt. Jones is Briar Belle (dam of McBriar 2:14), by Don Wilkes 2:24¾, a son of Alcyone, so Capt. Jones gets two crosses of Alcyone blood. The third dam was Belle Bryan by Mambrino Patchen, the fourth Old Den (grandam of a number of very fast ones) by Black Denmark, son of imported Hedgeford. With such breeding as this, the handsome proportions of Capt. Jones are easily accounted for, and his ability to transmit these qualities to his colts is assured. He is a black horse, 15.3

and reserve junior championship, and the second prize for yearling fillies. It is well for breeders to make note of such sires as Capt. Jones as they are the profitable ones to breed to. If the colts are trained they will show speed, but if the owner does not care to go to the expense of training he will have young horses on his farm that will command prices high enough to pay a big profit when offered us roadsters. Capt. Jones has had a very limited opportunity in the stud, but every one of his get yet trained can show 2:30 speed. From his loins we predict will come in the very near future more than one 2:10 performer, and then there will be a rush to patronize him at a larger price than is now asked for his services. The breeders of Oregon are fortunate to have such a well bred son of McKinney in their reach.

CAPTAIN JONES

hands high and weighs 1150 pounds. His trotting action is perfect and although never raced he has a well authenticated trial of 2:22½ and possesses much greater speed. His colts are all trotters, ideal roadsters of good size, level headed and stylish. A pair of his three-year-old geldings sold last year for \$800, and a four-year-old by him sold for \$1,000 for a roadster. Capt. Jones sired the winners of the first prize for two-year-olds and junior championship at the Lewis and Clark Fair, the first prize for yearlings

Stockholders of the Washington Park Club, Chicago, on Monday voted to dissolve the organization and sell the great race track for building purposes. It is not known when the sale will be made, but it is certain that there never will be another race meeting there. Grafters are directly responsible for this lamentable condition of affairs. The people of Chicago want racing, and would favor a racing bill, but certain grafters are powerful enough, or have been in the past, to prevent the passage of a favorable law.

"UNIMAK." BY McKINNEY. 2:11¼

McKINNEY---DIRECTOR---NUTWOOD.

Stout blood, good bone, size, individuality and race horse speed are the qualifications one should look for in a sire, as they are all money bringers when the sales are on or the races begin. A breeder who made a great success in the breeding of fine cattle once said that he attributed much of his success to the fact that he always demanded masculinity in the looks of the males and femininity in the appearance of the females of his herd. The same rule will apply to horses, and whether it be runners, trotters or draft stock, the best producing stallions were intensely masculine and the greatest mares possessed all the motherly traits and instincts. An effeminate looking stallion never achieved any great success. The McKinney stallion Unimak, three years old, owned by Capt. C. H. Williams of Palo Alto, has all the qualifications enumerated in the first paragraph of this article. Unimak is now a three year old, and a nobler, grander individual never put foot on the earth. He is a representative of three of the greatest race crosses—McKinney, Director and Nutwood. The first named is the leading sire of 2:10 trotters and 2:15 performers, the second founder of one of the greatest if not the greatest race winning family yet produced, while the third is reckoned the greatest sire of standard performers and brood mares that ever lived. Why should not such a combination of blood produce a colt that has all the qualifications of a race horse and a sire? John Phippen, the well known trainer of trotters, who was with Palo Alto Stock Farm for many years, and who has given over 60 horses records from 2:12 to 2:37, wrote, under date of December 17th, the following about this colt:

"Unimak at three years old is a beautiful seal brown stallion, near hind feet and coronet white, by the great McKinney 2:11¼, first dam Twenty-third by Director 2:17, second dam Nettie Nutwood, dam of Hillsdale 2:15, by Nutwood 2:18¾. He is a grand individual, weighs about 1200 pounds and stands 16 hands and an inch high. In his two year old form he was nicely broken and given just work enough to step a quarter in 44 seconds and an eighth in 21 seconds. This was done about the fifth time he was ever on a track when driven for a little speed. He was then taken home and jogged nicely through the winter.

"This spring he was given ten well bred mares and was then turned out until October 15th. I then took and jogged him until November 10th, when I gave him his first work on the track and he stepped a quarter in 43 seconds. His next work for speed was on November 27th, when he trotted a quarter in 40½ seconds, the last eighth in 18½ seconds. December 14th (three days ago) was his next speed lesson. On that day he stepped his quarter nicely in 37 seconds, the last eighth being in 18 seconds.

"Unimak will be given a limited number of approved mares next spring, and I would advise owners of good mares to look this fellow over before breeding. He will undoubtedly make a very fast trotter and his development for speed will go on in earnest after the stud season of 1906, as the following season, 1907, he will be prepared in his five year old form for a record."

The above from John Phippen, as conservative and as reliable as any man in the business, is worth heeding. Those breeders who are looking for a sire that combines in his make-up so many characteristics of two of the greatest stallions ever in California—Director and McKinney—should open correspondence with the owner of Unimak forthwith. A better chance to breed to a high class young horse was never offered.

SELECTING BROOD MARES.

BY SAM GAMBLE

The writer came to California in the year 1872, a young man, without a handle or any newspaper notoriety attached to his name, and occupying the position of caretaker of a trotting horse. He was not long a resident of this sunset land before he became connected with business gentlemen who were interested in the handsome trotting horse, and engaging with them, rendered them satisfactory service, or he would not have continued with them for so many years. One of the first acquaintances he made was that leading California horseman, Harrison R. Covey, father of the late Frank Covey. The elder Covey was the first superintendent of Palo Alto Stock Farm, and with his able assistance that renowned farm was established by that noble and enterprising citizen, the late Senator Leland Stanford. These gentlemen were bosom friends for years, and the Senator had the greatest confidence in Mr. Covey's natural ability as a horseman and in his practical knowledge in the selection, mating and breeding of trotting horses that would possess extreme speed and the ability to carry it over a mile of ground.

Mr. Covey was considerably my senior, but we were the warmest of friends and I always listened with the greatest interest when he advanced his ideas in regard to breeding the trotter. He was naturally very fond of a horse, and in my opinion was the best judge of what constituted a great sire and a producing mare of any person I ever knew, and I think it was his great talent in this direction that made the success of Palo Alto Farm. It must never be overlooked by those who admire the thoroughbred cross close up in the trotter that Mr. Covey was one of the very first to advance that idea, and that he held that it must be used in connection with blood lines that have the brain, conformation and trotting action, such as Electioneer possessed. Not only was Harrison Covey an adept in judging individual qualities in horses, but his ideas in training did to a certain degree revolutionize the art as it was followed prior to the establishment of Palo Alto Farm. He should receive the credit of being the father of the system of the early training of baby trotters, that was destined to astonish the world and earn champion records for the youngsters bred at the farm of the tall pine. I do not overlook the great work and the ability of Charles Marvin, who developed and drove these trotters to victory, but the foundation plans were drawn up by Harrison Covey.

There are five essentials necessary to the success of a large stock farm. First, an owner with money and common sense; second, a man well versed in all the branches of horse breeding and training as superintendent; third, a careful, level headed man as colt breaker, capable of making good manners and good mouths; fourth, a good speed developer, one who can drive the shortest and quickest mile and get the money and a reputation for the owner and his stock; fifth, a good, attentive care taker with good head and of gentlemanly conduct.

Palo Alto was blessed with all the above, and with such a stallion as Electioneer and a few high-class mares, the combination accomplished wonders and its memory now occupies a warm place in the hearts of all true American horsemen.

Messrs. Stanford and Covey's great contribution to science in demonstrating through the agency of Mr. Muybridge's camera the actual movements and positions of a trotter's legs in action, more so the rightly shaped joints that are so essential to speed, will never be appreciated by the majority of breeders.

The writer learned from Mr. Covey these valuable lessons which Mr. C. had learned from the camera, and I can now say that these lessons were stamped so clearly and so indelibly that in the selection of untried stallions and young mares as producers of speed he has never yet made one mistake. To this day the writer has tested it, and at one time it was his capital stock and paid a profit on the knowledge.

In 1878 the late Daniel Cook, a gentleman who could not be termed a practical horseman, but one who had a great natural love for that noble animal, proposed to the writer that he sell out his business and start a stock farm with him. Mr. Cook was perhaps the best friend the writer ever possessed, but my business was then of such a pleasing nature and profit that I at first emphatically declined to entertain Mr. Cook's very liberal offer, but on his persistence I finally yielded, and as it turned out, the move was a very unfortunate one.

In the fall of 1879 Mr. H. R. Covey and the writer made a business trip to the eastern side of the Rocky Mountains. Mr. Covey representing Senator Stanford and the writer Mr. Cook. We visited all the important stock farms in various States, and at the same time inspected all the leading producing stallions and brood mares of national repute. A careful inspection of these animals convinced us that our new discovery or "trade mark" was correct, as it was to be plainly seen in the animals that had produced the kings and queens of the trotting turf. The first thoroughbred brood mare that Mr. Covey purchased on this trip was then untried, but is now well known to fame as Dame Winnie, daughter of Planet and dam of Palo Alto 2:08½, and several others with fast records. Other mares selected by Mr. Covey on that trip and after he returned to California were Lizzie Whips, Josie, Columbine, Beautiful Bells, Mayflower, Lula Wilkes, May Queen, Sontag Mohawk, Norma, and others. These mares well demonstrated the fact that Mr. Covey's discovery was worth something and that the camera had told him no fib.

In the years of 1864-5 and 1870 to 1872 the writer saw a great deal of Geo. Wilkes and Lady Thorn's performances. From different standpoints they may be considered as great trotters as any, and Geo.

Wilkes was probably the most remarkable trotting stallion ever seen, times and opportunities considered. He was campaigned for over twelve years, and beat all comers, no matter how hitched, champion of his sex, record 2:22 to harness, old fashioned heavy sulky, 2:25 to heavy skeleton wagon and 2:28 to pole. When he was retired to the stud and taken to Kentucky by that enterprising and hustling horseman, the late W. H. Wilson, in 1873, like Electioneer he was condemned and pronounced a failure by many of the self-constituted judges of a great horse, yet he forced his recognition on them. Probably no one branch has ever been the superior to Baron Wilkes and Alcione as sires, and Alcantara as a sire of mares. As a race horse Alcantara was a leviathan in soft or tight places, but in his day owners of horses of his sex fought shy of him. It is not much wonder that he went amiss after such a race as the one at Louisville in the fall of 1880, and the next week at Lexington he received an injury which ended his career as a race horse.

I first met Dr. Talbot, the breeder of Alcantara and Alcione, in 1879, and I now state without fear of contradiction that I was the first person to offer over \$6000 for a son of Geo. Wilkes, and the horse I made the offer for was Alcantara. He was then a three year old. I offered \$10,000 for Alcantara and Alcione, and \$12,000 for the two colts and their mother, Alma Mater. As it turned out it was perhaps better for the colts, the mare, Dr. Talbot and the breeders of the land, that the deal did not materialize. The only living witness of the incident that I now recall is that genial and well known horseman, Mike Bowerman of Lexington. In March, 1888, the writer purchased a one-half interest with the late W. H. Wilson in the then ten months old colt Higbee, now known to fame as McKinney 2:11¼. For various reasons I disposed of my interest in the colt and the same month I purchased for the late Seth Cook, then proprietor of the Oakwood Park Stock Farm, another representative of this great family, then a three year old bay filly, and now known as Bertha by Alcantara, and classed by many as one of the greatest of her sex.

In March, 1880, the Cook Farm, now known as Oakwood Park Stock Farm, was established as a place for the breeding of trotting horses. There were about sixty head of horses on the farm at the time it was purchased that it would be a conundrum to guess to what use they could be put. That spring the writer had secured the handsome stallion Steinway to head the farm, and in the fall of 1881 selected ten head of mares, including Katie G., Ellen Swigert and others, to breed to him. In the fall of 1882 Daniel Cook passed over that mystic river, and the great central sun of the farm went down amid the deep sorrows of his many friends and neighbors. His death was a loss to the breeders of the State. In 1883 there was a dispersal sale of the estate. Seth Cook could not endure the idea of his brother's favorite horse being sold at public auction and consequently secured him from the bidders by private agreement, and at the sale procured Katie G. and Princess. When Seth Cook came into possession of the farm in 1885, the writer returned there with the understanding that it would be stocked with a band of high class brood mares. Katie G. was about the only one on the farm that had proved a happy nick for Steinway. Katie G. was purchased for the writer, who named her after the best woman that ever lived—his wife. This mare was the first of the writers' selections. She was bred by F. S. Malone and was one of the first of Electioneer's pride placed on the market. She was a handsome brown mare with tan flanks, stood 15.2 and was a perfect gaited line trotter. She was of a highly nervous disposition, one of the do-or-die kind, and, like glass, had to be handled with much care. She was foaled with a deformity, her left hind leg being shorter and smaller around than her right. Her mouth had been ruined by a colt breaker who first handled her, consequently she was beyond control when at a high rate of speed. She would hit her left toe so hard at times as to throw her off her stride. The writer has always been of the opinion that but for this she would have been as fast as any of the Electioneers. As a four year old she trotted under the very worst conditions a quarter in 32 seconds and a half in 1:07. She was mated when a four year old to Steinway, then six, and the produce was H. R. Covey, one of the fastest trotters ever seen on any stock farm, and but for an attack of pleura pneumonia would have made a great reputation for the farm. We had all the big stakes at our mercy and we all "wore crepe" when his sickness prevented his starting. Katie G.'s next foal was Carrie Malone, now in the great brood mare table, and her next Chas. Derby 2:20.

As we had few other brood mares on the farm Mr. Cook decided to close out all the stock at public auction, and on February 28th, 1888, the sale was held. We kept Steinway, Chas. Derby and the mares Katie G., Princess and Leah and a few daughters of Steinway. It was the greatest horse sale I ever saw, considering the stock sold, and Mr. Cook was so pleased with the result that he came to me with outstretched hand and congratulated me, saying: "You advised me correctly, and you shall take the money I have received for this stock and buy twenty or thirty mares such as you think will suit the stallions."

I started March 4th and after buying Bertha, Ida Wood, None Better, Tone, Nanny Smith, Inex, Algertetta, Addie Ash and Maggie McGregor, all untried fillies at the time, I received word from Mr. Cook to stop buying and ship home what I had. I was surprised, as I had not exhausted the fund and had picked out a number of others that I thought it would be murder to leave behind. It seems the knockers had got in their work, but the records now show what sort of mares I selected. The stock arrived in rather bad shape after a long trip by freight train, and Mr. Cook was not very well pleased with their appearance, but on receiving an offer for the whole consignment concluded not to sell. Mr. Cook did not live long

enough to see the results of mating these young mares with his stallions, but the Year Books show that every one has produced standard speed.

Later, the late Mr. Hohart desired me to select for him a daughter of Dictator. My choice fell on Nancy Lee, the dam of the then untried Nancy Hanks. I secured her, but such was Mr. Hohart's prejudice against the Happy Medium blood that he would not buy the daughter at any price. I have selected and purchased for various gentlemen in California, no less than 87 young untried matrons and of these 74 have produced horses with records from 2:04 to 2:30, four better than 2:06, fifteen in the 2:10 list, twenty-four in the 2:15 list, and forty-two in the 2:20 list. Four of the remaining mares have daughters whose produce have records from 2:07 to 2:20, and the remaining nine have produce that is yet young and untried.

I am proud of my failures, and with malice toward none and charity to all I will say A Merry Christmas and a Happy New Year to all. Yours,

SAMUEL GAMBLE.

THE LAST LOAD IN THE BARN.

Talk about your automobiles,
And your reckless rides today—
Guess you never raced a rain-cloud
On a sloshin' load o' hay.

When a youngster, I jest liked it—
Startin' from the fardest side
Of the forty-acre medder
With the last load high and wide.

Pap bareheaded and a drivin'
Like a jockey at the fair—
Horses down to a dead gallop—
Hay-straws flyin' through the air.

And us boys, our bare shins buried
In the middle o' the load,
Holdin' to the pitchfork handles—
Wonderin' if we'll make the road.

Lightnin' flashin', thunder boom—
Nancy! how that old load reeled
When we struck the big dead furrow
In the middle of the field.

Through the gap and down the turnpike,
Horses with their ears laid back—
Pap with one eye on the rain-cloud
And the other on the track.

Mother on the porch a-wavin'
Of her apert smiling' glad—
Sister scootin' crost the barn-lot,
Op'nin' gates and doors like mad.

And us boys a 'clingin' breathless,
Git a mighty healthy scare,
When pap, drivin' at a gallop,
Clears the gate-post by a hair.

Right into the barn we clatter,
And the horses snort and rear.
As a mighty clap o' thunder
Shakes the roof and lifts our hair.

While the rain comes down in rivers,
We ain't carin' a corsarn,
For our supper's on the table,
And the last load's in the barn.
—E. J. Wilson.

THE DEMAND IN THE EAST FOR RACE PROSPECTS

The defeat of Governor Herrick in Ohio and of the Democratic gubernatorial candidate in Massachusetts insures the passage of fair racing laws in these two states and the harness game will take on a new life with the beginning of the New Year. The fall sales at Eastern sales points already forecast that the spring sales will mark stronger values than have been known for years and old time prices will prevail for horses of real merit. Californians should be quick to take advantage of their opportunities and send into the Eastern market their best material. With Cleveland discontinued as a sales point the buyers that gave so much prestige to the Ohio city have come to frequent the Indianapolis sales and the Indiana city has now become the best distributing point for race prospects and the better class of breeding stock. The Indiana city is peculiarly adapted for the holding of sales of consequence and recent auctions at that point have demonstrated that higher values prevail at that point than anywhere in the Middle West. When it is remembered that both McKinney and Sidney Dillon found new homes in the Hoosier state the immensity of the breeding interests in Indiana will be taken into account and it can be readily understood how Indianapolis has become so foremost as a sales center. Every accommodation necessary for the conduct of big sales is available at Indianapolis, and with the Blair-Baker Horse Company at the helm, every future sale at Indianapolis will all the more demonstrate the advantages of that market. The next Indianapolis sale is scheduled for February 26th to March 3rd and Californians who have under advisement the consignment of horses to an Eastern sale will do well to consider Indianapolis. Mr. Frank P. Kenney, well-known to all California horsemen, is in active charge of the sale affairs of the Blair-Baker Horse Company and will be very glad to hear from intending consignors and any communication addressed to him at the Union Stock Yards at Indianapolis will receive his prompt attention.

A bit of gossip on the "hot stove circuit" is that Tommy Murphy, who was so successful with Susie N. this year and who scored a great triumph a year ago with Hetty G. after that mare had been generally slated as good only for broodmare purposes, will take Millard Sanders' place as colt trainer for John H. Shults. He will have a lot of colts by Axworthy to develop and race, probably in the fall. His string will be made up of Guy Axworthy, Nell Worthy, Nellie Worthy, Miss Low and Bonnie Worthy. Ed Benyon will also train a yearling, a two year old and a three year old from the same farm.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

ROBERT DIRECT.

In the veins of the handsome big black stallion Robert Direct, owned by Mr. R. O. Newman of Visalia, flows a rare combination of blood, and at the same time one of the choicest. We do not know of another son of the mighty Direct 2:05½ who gets through his dam the blood of Electioneer, Sultan, The Moor and A. W. Richmond, and it is no wonder that Robert Direct is showing a very high rate of speed and transmitting this speed to his get. Robert Direct stands 16 hands, weighs 1200 pounds and is a solid black in color. He has size and substance and finish and quality, and is considered by all horsemen who have seen him to be one of the grandest individuals among the stallions of California. He is now in training at the Hanford half mile track and has shown a half in 1:04 and an eighth in 15 seconds, but this is not the limit of his speed. One of his first crop of foals, Andy Direct, was in training for three months this year for a race for yearlings, which he won in straight heats, the first heat, a half mile, being paced in 1:14, and the second in 1:13, with the last quarter in 33½ seconds, a 2:14 gait. He could have paced a half in 1:10 without much trouble. Like his sire he is a large, fine looking colt, with level head, and is a solid brown in color. He is eligible to start in the two-year-old division of the Pacific Breeders' Futurity next year and will be heard from.

The blood lines of Robert Direct all represent speed, stamina, courage and every race horse quality. Direct 2:05½, his sire, was one of the greatest race horses ever bred in America, and has established such a family of race horses that the phrase, "The Directs have the winning habit" has become a household word. The fact that Direct is the sire of ten 2:10 performers places him in the front rank as a sire of extreme speed. Columns could be written about the "little black rascal" whose death last year was a public calamity, but every horseman knows all about him. He

TROTTING BRED STALLIONS.

The trotting-bred stallion of to-day has at least one virtue that is not found in every type of horse, and which is in itself a most desirable one and which bespeaks an amount of intelligence that has had much to do with making this type of horse popular, says a writer in Kentucky Stock Farm. The trotting stallion is not vicious, generally speaking, in fact, it is an extremely rare instance where a vicious brute is found, and among all the trotting stallions in America it is doubtful if there is one that is really dangerous. Stallions of other types are frequently not only vicious but extremely dangerous, and this is probably true among the thoroughbreds more than among any other breed. The thoroughbred stallion Orme, son of Ormonde and Angelica, which, while he has proved a success in the stud, is handicapped by his frightful temper, and at times since his retirement to the stud he has been little short of a man-eater. The American stallion Onondaga was for many years a menace to those in charge of him, and his owner resorted to the expedient of having his eyes put out by electricity in order that he could be more easily managed, and in many other instances could be mentioned thoroughbreds, the tempers of which made them dangerous if not undesirable. Among trotting stallions, however, such instances are extremely rare, and in almost every case the result was from mistreatment on the part of an owner or groom. Robert McGregor, while he had the reputation of being a vicious horse, was, when properly treated, easily controlled by any one who was not afraid of him, and it is a rare occurrence where a trotting stallion is not completely submissive to the will of those in whose charge he is. One has but to witness a trotting stallion in his paddock to realize how docile he is, for under the same circumstances a thoroughbred would resent an intrusion into his domain, and the same is frequently true of the saddle stallion, the draught horse and the hackney.

Many of the most successful show horses in America are trotting-bred stallions, and yet they can be as easily controlled in or out of the show ring as geldings or mares. This characteristic is undoubtedly due to a superior order of intelligence, for beyond question

ROBERT DIRECT

A Sixteen-Hand Son of the Great Direct 2:05½.

was sired by the great Director 2:17, out of a great brood mare by Echo, and his grandam was by the thoroughbred Jack Hawkins, a son of Boston.

The dam of Robert Direct is Daisy Basler, an own sister to Ethel Basler, dam of those fast fillies My Way 2:22, as a three year old (and only beaten a head in 2:13½) and Stonelita 2:20, as a two year old. Daisy Basler is a daughter of Robert Basler 2:20, sire of Dr. W. 2:08½, Jonesa Basler 2:11½, etc. Robert Basler was by Antevolo 2:19½, son of Electioneer and the great brood mare Columbine by A. W. Richmond, and his dam was the great brood mare Elizabeth Basler by Bill Arp, out of Mary of Warfield, a grandson of Boston. The second dam of Robert Direct is Richmond by Pasha, son of Sultan and Madam Baldwin by The Moor. Pasha sired the dam of that great trotter Toggles 2:08½. Robert Direct's third dam is Miss Rowland by A. W. Richmond out of a thoroughbred mare. Here is the very stoutest of racing blood. Two crosses to Boston and two to Bonnie Scotland, two of the greatest race horse sires the country has known. There could hardly be a choicer combination of blood lines than these in the veins of Robert Direct. That he will produce stylish and speedy campaigners, do-or-die race horses, and large, fine trotters and pacers is certain if he is bred to good mares. He will make the season of 1906 one mile northeast of Visalia at The Palms. His service fee will be \$50 for the season, with a return privilege. Mr. R. O. Newman, his owner, invites correspondence in regard to breeding Robert Direct to well bred mares, and will be pleased to send a card containing tabulated pedigree that the great producing lines of his stallion's breeding may be studied by those interested.

the American trotter, as a type, is the most intelligent horse known, with the possible exception of the Shetland pony. This intelligence is depicted in the countenance of many stallions, and while the trotter, as a rule, lacks that artistic beauty of head and neck that is frequently found in the thoroughbred and almost invariably in the saddle stallion, the race horse rarely possesses that broad expanse between the eyes and the almost human expression of the eyes themselves. The greater the degree of intelligence, which intelligence is so frequently depicted in the countenance, the less likely is the horse to be erratic or unsteady, and we believe that in almost every example of a stallion that was reliable and inclined to stick to a trot there could be found the broad forehead and an attractive countenance. Rattle-headed horses usually are narrow between the eyes and in other ways indicate outwardly their lack of intelligence, and not infrequently breeders can determine at a very early age in the horse whether or not there is a lack of intelligence and what the disposition of the horse will be.

THE SALE A GOOD ONE.

A New York paper contained the following comment on the recent Old Glory sale:

"Every horse offered to the anxious buyers was knocked down at its full value, and consignors returned home more than satisfied with the values they received. If the general average for the nine days did not come up to that of former years, it was due wholly to the quality of the stock offered.

"Perhaps the most singular incident in connection with this year's sale was the unprecedented fact that

not a single horse was rejected by the buyer. Several animals were resold, yet in most cases they found a new owner at higher prices than in the first sale.

"It is now in Fasig-Tipton Company's records that three horses were resold each three times, and each time sold at higher prices.

"While amateur drivers were among the liberal buyers, yet the breeders never let go of the best bred ones, while the racing men secured almost everything which looked to them like a fairly good racing proposition.

"In the opinion of horsemen of all classes there never was a sale of this magnitude in which less horses were sold at an advance by the buyers as during the past event. Every buyer bought for his own purposes, and hence speculators did not reap the harvest they expected.

"Among the latter were, perhaps, the foreign buyers or their agents. In former years they have been able to pick up good horses, of approved breeding, at prices cheap enough to allow them a margin of profit after the expense of transportation, but this time the home demand was too great to allow them to be competitors to any noticeable extent. As a result, up to yesterday only eighteen applications were filed for export certificates.

"Men interested in the American light harness horse, be they breeders, dealers or race track followers, surely had sufficient reason to go to their respective homes much encouraged for the future of the country's horse interests."

THE CLEVELAND DRIVING CLUB.

The annual table of statistics of the last matinee season of the Cleveland Gentlemen's Driving Club has been issued.

Orrin C. led the trotters, with nine firsts out of fifteen starts, being second six times. Interurban was second with six victories and three seconds in thirteen starts, while Nanco was first six times out of nine. Prince of Orange was first six times out of seven, and Belle Sentinel five times out of ten. Out of the forty-eight trotters who competed all but eleven succeeded in winning blue ribbons.

The pacing brigade consisted of only fifteen side-wheelers, all but one taking off one or more blue ribbons. Dutch Mowrey led with eight wins and four seconds in thirteen starts.

Slippery Higgins was the most consistent saddle trotter, winning six times in fourteen starts. Joe Jokes won five times out of eleven starts and Flim Flam, alias Colonel Longwell, won four blue ribbons in nine starts.

H. K. Devereux was the winning reinsman and driver with fifty-three firsts in ninety-six starts. C. K. G. Billings was second with eighteen firsts in twenty-three starts, while John Ray was third with thirteen firsts in twenty-seven starts. H. A. Watterston drew eleven firsts in twenty-eight starts.

The 2:04 of Lou Dillon was the fastest heat trotted while 2:03 made by Morning Star, son of Star Pointer, was the fastest mile paced; 2:43 was the slowest heat trotted. The fastest average was 2:15, the record for the next to the last matinee. The season's average was 2:21. This average was slower than in other years, this being due to the fact that the club catered more to the slower classes.

During the season there were 116 events with 286 heats and 396 starters.

SUCCESSFUL FAIR SEASON.

A farm paper published in the Mississippi valley says:

Our readers have just passed through one of the most successful seasons of agricultural education ever experienced by even the oldest citizen. The fairs both large and small have been well patronized by exhibitors and visitors. The disposition to improvement has never been more pronounced in all lines of agricultural work. Each department of farm work has its adherents who carry on the campaign of education in the interest of the specialty or particular industry represented.

The agricultural fair of the present day may very properly be termed the modern agricultural object lesson school. It is through these lessons by comparison of objects, animals and things that the fair visitor becomes a student, a judge, a discriminator in quality between the various competitive exhibits. This training is involuntary; it creeps into the mind unobserved, and the first knowledge the person has that he is being educated is in his asserting that "This is the best," or "That is my choice," "I would not give this cow for half a dozen of the others," etc.

The intelligent man, woman, boy or girl who attends one of these well managed county, district, or state fairs and comes away saying he or she is not greatly benefited does not express their honest sentiment. The agricultural fair of the present day is the greatest educator we have in practical farm production. No one appreciates this more than the agricultural newspaper man, who attends this shows from the beginning to the end of the fair season and observes the people and talks to them of the impressions formed. While everyone who attends the fair gains some advantage by the association or impressions made, the exhibitor comes more directly under the educational influence of the fair, and consequently reaps a greater benefit.

If you are not already associated with the county agricultural society take up the work at once. Help organize and prepare to hold a fair next year. The county association is the primary school for the training of our best exhibitors and fair men.

Strike—if they don't give you Jackson's Napa Soda when you ask for it.

FOUR GREAT CHAMPIONS.

Never before in all the history of the standard bred horse has such a group of champion stallions been owned on one stock farm as are now stabled at the International Stock Food Farm. Dan Patch 1:55½, champion of all pacers, Cresceus 2:02¼, the champion trotting stallion, Directum 2:05¼ whose record made at four years has never been equalled by a trotter of that age, and Arion 2:07¼ whose two-year-old record of 2:10½ still stands unapproached, even though it was made with the old fashioned high wheels. Two present day champions, the ex-champion trotter that also holds the four-year-old championship, and the holder of the record for trotting two-year-olds. Each stallion is not only a king by performance but each represents a different family of trotters. Dan Patch carries the pennant of the great tribe of Wilkes, Cresceus that of the McGregors, Directum upholds the banner of the Dictators and Arion that of the Electioneers. Mr. M. W. Savage, president of the International Stock Food Company, is the man whose enterprise and great business ability has built up one of the largest establishments of the Mississippi valley by just such daring enterprise as led him to buy Dan Patch for a large amount and follow it in succeeding years by the acquirement of the three additional champions.

The history of Dan Patch is known to all horsemen. He was sired by the mighty Joe Patchen 2:01¼ and his dam is Zelica by Wilkesberry 13.953, his second dam by Pacing Abdullah. No stallion that ever lived has approached his performances. He has paced thirty-six miles in 2:01½ to 1:55¼, and has paced nine miles that average 1:57½. He paced six miles this year that averaged 1:58, and wound up his campaign by starting against the record of Star Pointer made with no runner in front and reduced it a second and a quarter. This year he left stud service on June 15th, up to which time he had been mated with fifty-two mares. He made his first exhibition in September, pacing the mile in 1:59½, a marvelous performance. During the year he broke four world's records, and the Canadian half mile track record, traveled 6,000 miles in sixty-six days, and finished the season strong, vigorous, in perfect condition and very promising for speed exhibitions next year. He is not only the greatest race horse and exhibition horse in the country (having drawn 250,000 to see him in four days his year), but he is a great sire. He already has a 2:10 performer in Ed. Patch 2:08¾, and two of his get are expected to beat 2:05 next year. He has more miles in two minutes to his credit than all other trotters and pacers that ever lived. He never lost a race. Like the great Eclipse it was invariably Dan first and the rest nowhere, and it made no difference how fast they went, he could play with all of them in the last half. Mr. Savage was offered and refused the immense sum of \$180,000 for him this year, which offer was made by a syndicate of horsemen.

Directum 2:05¼ did not appear in the racing world with a preliminary flourish of trumpets. He was bred by John Green of Dublin, Cal., and foaled in 1889. When broken to harness, he showed the first time he stepped off that the mantle of speed had fallen on his shoulders; that he was a true son of the great black stallion that made a sensational campaign in 1883 in the East. Even on the lookout for fresh material and fully recognizing the great capabilities of the Director family, Monroe Salisbury leased the racing qualities of Directum, quietly brought him East the spring of 1892 and made a name for him in the very first race in which he started. There were no ante-campaign stories of the wonderful speed of the black three-year-old. He came unheralded, and the first heat he trotted in a contested race convinced those who witnessed his performance that "the king-maker" had brought out another world's champion. That year and the next Directum went through two marvelous campaigns, that of 1893 being the greatest ever undertaken by a four-year-old, meeting and defeating every good one in his class, closing the season with the world's record for trotting stallions, which he held for seven long years. That year his speed was a revelation and his courage a marvel to horsemen. Singly or in battalions, Directum was more than a match for all. As a four-year-old he started in seven races, winning all of them, and gave five exhibitions against time, lowering the stallion record as follows: At Evansville, Ind., to 2:07½; at New York to 2:07; at St. Joseph, 2:06¾, and at Chicago, to 2:06½. Finally, at Nashville, Tenn., he electrified the world by winning the third heat of the free-for-all in 2:05¼.

It was expected that he would prove a great sire, but he has even exceeded these expectations. He is now the sire of twenty-eight standard performers, of which four are in the 2:10 list.

Cresceus 2:02¼, bought at the Old Glory Sale in New York last month for \$21,000, is the greatest bargain any breeder has secured in years. It is unnecessary to stop and enumerate his long list of world's records. Everybody knows them by heart. For one great thing that any other trotting stallion has ever done, he can show a dozen greater. His crown is thickly gemmed with stars, but one of which would be sufficient to confer celebrity on any other horse. With him they are only parts of a "stupendous whole"—a greatness so colossal as to be a giant in strength, a lion in courage, a phenomenon in consistency and wearing power. In the sun of their attributes, some horses—as some men—seem to transcend the limits which nature, as we conceive it, has set. Of these is Cresceus. Everyone readily admits this. It can not be denied. And out of it all stands this one important fact that he is a stallion—The only stallion that ever has held the world's trotting record. Yet, that his career may be recalled more forcibly, we give herewith some brief statistics:

As a three-year-old he secured a record of 2:11¼ in a race against eleven of the best aged trotters of that

year. There were eight heats in the race and Cresceus won the last three heats, trotting the seventh and eighth in 2:11¼. As a four-year-old he reduced his record to 2:09¼, as a five-year-old to 2:07¼, as a six-year-old to 2:04, as a seven-year-old to 2:02¼, which made him then the champion trotter of the world, and the next year when he was eight he made that wonderful performance at Memphis, where he trotted two miles in 4:17, also a world's record.

Volunteer says: To doubt of Cresceus' success as a sire—why, if one stops to think of it, the very idea is absurd!—false to every fact and theory, opposed alike to reason, precedent and logic. Look down the list of previous champion stallions and observe what great sires practically all have made. Consider then Cresceus' rank among them; consider his breeding—by one of the greatest progenitors and out of one of the greatest matrons known to stud history; look at the horse himself—an individual upon whom power and greatness are so legibly stamped as to be at once impressively apparent—and ask yourself the question, not will he succeed as a sire, but—how on earth can he do anything else?

There is another potent reason why Cresceus is bound to prove a great sire. That reason is, because he is the greatest representative of one of the greatest strains of blood in the trotting peerage. Aside from Robert McGregor, there are only three progenitors that have sired five or more sons that have each sired a better than 2:09 trotter—George Wilkes, Electioneer and Hambletonian 10. It is with this immortal trio—all of them older than him and belonging to senior generations—that Robert McGregor, in this respect, is alone, of all sires entitled to rank. Could anything speak more eloquently of the immense potency and value of the McGregor blood in the male line? Yet, remarkable as the fact may seem, there is not today a son of Robert McGregor in any of the great studs of this country, where he is being given opportunity to perpetuate the blood. If other sons of Robert McGregor, standing in the "tall grass" remote from the great breeding centers, can get such trotters as Snyder McGregor 2:05¼, and Kid Shea 2:07¼, what will Cresceus do placed where he belongs, at the head of a great stud of America's choicest matrons?

Arion 2:07¼ is the pride of California. As a two-year-old, he trotted in 2:10¼, to high-wheel sulky, a performance that has stood as the world's record for trotters of that age since 1891, the nearest approach to it being 2:13¾. As a three-year-old, he set the world's trotting record of 2:10¼ for colts of that age. No three-year-old stallion has equaled or beaten it. As a four-year-old, he won the Spirit of the Times stake, \$11,000, for four-year-old trotters, defeating Trevillian 2:08¼; Belleflower 2:12¾; Czar, and Parole. Trotted a record mile in 2:07¾. In these days of extreme speed, when record after record goes down each year before the onslaught of champions, it is unusual to see a world's record of any kind stand unassailed for thirteen years. And yet the two-year-old record of the world still stands where the peerless Arion set it in 1891. His mile in 2:10¼ as a two-year-old stands pre-eminently at the head of all trotting performances. The miles of Lou Dillon, Cresceus and others pale into insignificance when compared with it, and it seems to be the universal opinion that his record will stand for years and years to come. Even when a two-year-old does trot a mile in 2:10¼, it will be to "bake" sulky and allowance must be made before the glory of Arion's performance fades. Since the day Arion trotted that sensational mile, he has been constantly before the public. His sale for \$125,000 still stands a world's record; his three-year-old record of 2:10¼ has never been equaled by a colt, and his four-year-old mark of 2:07¾ surpassed by but few stallions. His opportunities in the stud have been most limited—only those in close touch with conditions can appreciate how limited—yet he has sired twenty-seven with standard records, among them the great trotter, Nico 2:08¼, while one of his daughters has produced the peerless and lamented Sadie Mac 2:06¼ and another, that great young trotter Todd 2:14¼.

The International Stock Food Farm contains 700 acres and is not only the home of Dan Patch 1:55¼, Cresceus 2:02¼, Directum 2:05¼ and Arion 2:07¼ but of Ed Patch 2:08¼, Roy Wilkes 2:06½ and Buttonwood 2:17.

The farm is ten miles from the city limits of Minneapolis on the Chicago, St. Paul, Minneapolis & Omaha Railroad and the station at the farm is named Savage. The farm is beautifully situated in the Minnesota Valley, watered by a sparkling trout stream that never freezes in the winter and twenty-five springs. The Minnesota River flows through the farm so that it can be reached by either boat or cars.

The barn on the farm cost over fifty thousand dollars and contains over two hundred box stalls. The mile track was built by Mr. Seth Griffin at a cost of eighteen hundred dollars and is an exact reproduction of the celebrated Memphis track. A one-mile covered track will be built next year.

There are about 100 high class brood mares, twelve of which are 2:10 producers; forty others are producers. This farm was started with the expectation of not only showing what Minnesota could do in raising high class harness horses, but also as a fairly equipped experimental farm to show the value of International Stock Food. All the stallions, brood mares and colts are fed International Stock Food every day.

Cresceus has been taken in hand by Mr. Hersey and is now being prepared with a view of breaking his record next fall, and Mr. Savage expects both Dan Patch and Cresceus to lower their present records in the fall of 1906.

A large majority of horse owners, drivers and horse breeding farms are now constant users of International Stock Food and its use is strongly endorsed by the old veteran, Monroe Salisbury.

International Stock Food has had for years a large sale in the extreme western states, but for the purpose of more thoroughly pushing the sale of Inter-

national Stock Food and their other preparations on this Coast, Mr. C. E. Veeder, who has been in the employ of the International Stock Food Company at the home office and factory, Minneapolis, for ten years, has recently been appointed resident agent. For the present, mail will reach him addressed care of the Petaluma Incubator Company, Petaluma, Cal., or Portland Seed Company, Portland, Ore.

IMPROVEMENT IN BIKES.

W. J. Kenney, the well known proprietor of the Kenney Bicycle Company at 532 Valencia street, recently returned from an extended trip through the principal states on the other side of the Rocky Mountains, and gives us the following interesting account of his observations.

"During my two months' trip through the eastern country I visited all the principal race tracks and speedways of the country, and practically all the factories where track sulkies, speed carts and speed wagons are made. I must say they are making great wagons are elegantly ing. The new speed road brushing and train-almost exclusively for and road carts are used all the other cities speed Boston, while in nearly Cleveland, Detroit and speedways of New York. proper thing on the speed wagon is the only these vehicles. The improvements in all made affairs, with high arch axes, low wheels, long shafts, and are very light weight, being from 65 to 125 pounds. As they are now made they are very strong and durable, however, and a horse can trot or pace almost as fast in them as he can to the track sulky. For a stylish rig one of these wagons, driven by a handsome horse, can't be beat, and when our oval speed track in Golden Gate Park is finished, which will be about the first of next June, these speed wagons are certain to be all the go with San Francisco members of the matinee clubs.

"Radical changes are being made in sulky construction in nearly all the large factories. The new models for next year will have shafts about seven inches longer on the average, the arches will be dropped 35 and 33 inches, and some as low as 29. All the first-class makers are substituting second-growth hickory for arch and bow instead of using steel tubing. This is a big improvement in itself, and all the builders now realize that to be fast and durable the wheels of a sulky must be kept in perfect line.

"The McMurray sulky has a very clever device for this purpose, which is an exclusive patent of the company's and is invaluable, as when a sulky has had a bad wrench from accident or any cause, anyone can line up the wheels with this device in a few minutes. The only tool needed is a monkey wrench.

"The changes in speed carts for track work are many. There are longer shafts, dropped seat, wider wheel centers, and many other new features which will please the lovers of a good horse.

"On all the leading tracks and at all the big business centers there is a very optimistic feeling in regard to harness racing. The owners and trainers were at the Old Glory sale in force and a very large proportion of the horses purchased during the two weeks' auction were bought by persons who will have them raced on some of the many circuits next year."

The Members of the California Polo and Pony Racing Association held a meeting at the office of President Rudolph Spreckels Monday. It was decided to pass over the election of officers until the next meeting, when many of the members that are now out of town will be back. Plans were discussed for a race meet to be held on Charles W. Clark's track at San Mateo on New Year's day. There will be five races, a three-eighths, a quarter mile, a half mile, a three-quarter mile, and a three mile event. The latter contest will be for hunters and it is expected that many of the members of the San Mateo Hunt Club will enter their mounts. There is some prospect that the scene of the pony racing will shift at the end of February to Coronado. The racing association at that place is making a strong bid for the stables of the California Association.

DISTEMPER AND COUGHS CURED.

Goldts in animals if neglected are apt to result seriously. They can be as readily cured as in the human family. If your horses cough and are out of condition, better give Craft's Distemper and Cough Cure a trial before they come down to distemper. This well known remedy is one of the very best available, and is fully guaranteed to cure coughs, colds, distemper, pink-eye, and all catarrhal diseases of horses, sheep and dogs. It will pay well to have on hand at all times a bottle of this invaluable remedy. It is made by the Wells Medicine Co., 13 Third street, Lafayette, Ind., and their book, "Veterinary Pointers," tells all about it. It also gives valuable veterinary information about the care of horses, how to tell distemper, nursing, etc. A postal card will bring it, and any of our readers who send for it will certainly feel well repaid for the postal card and the little time that it takes.

"KNOWS OF NOTHING AS GOOD."

Mr. J. T. Taylor of Cle Elum, Wash., writes as follows: "In my opinion QUINN'S OINTMENT is the best remedy there is to remove bunnies. I removed a large bunch from a horse's forehead that seemed to be solid bone; and one as large as a man's head from another horse's shoulder; have removed four or five other bunches from horses." This is the general verdict of leading horsemen all over the country. For curbs, splints, spavins, windpuffs and all bunnies there is nothing better. Price One Dollar per bottle delivered. Address W. B. Eddy & Co., Whitehall, N. Y., if you cannot obtain from druggist.

Ed Winter 2:12¾ by Jay Bird will be shipped to Europe, according to the latest reports.

DAN PATCH 1:55 1/4

DIRECTUM 2:05 1/4

ARION 2:07 3/4

CRESCENS 2:02 1/4

NUTWOOD STOCK FARM.

Eighteen years ago, Mr. Martin Carter of Irvington, Alameda county, California, sent his mare, Lida W. 2:18½, to be bred to William Corbitt's premier stallion Guy Wilkes 2:15¼. At that time Guy Wilkes was commanding a service fee of \$250, and in the estimation of men who had given the subject of breeding trotting horses more than passing attention was the best sire in California. Mr. Carter's mare was by Nutwood 2:18¼, out of a mare by Geo. M. Patchen Jr. 2:27, her grandam a noted running mare of the early days of California racing known as Rebel Daughter, and sired by that "Godolphin of the Wilderness" (to borrow a term from Capt. Tom Merry), known as Williamson's Belmont. Lida W. had a race record of 2:18¼, and could speed at a two minute clip, so Mr. Carter reckoned that the Nutwood-Patchen-Belmont blood in her veins, when combined with that of Guy Wilkes, would produce something worth while. He was not disappointed. In the spring of 1888 Lida W. foaled a handsome chestnut colt which was named Nutwood Wilkes, that his name might designate his breeding, and this horse is fulfilling every promise of the career outlined for him by his breeder. Mr. Carter came to California with no capital but a knowledge of the wagon and cabinet making trade, a level head and a rugged constitution. He had learned when a youth that anything worth doing at all was worth doing well, and with his brother, the late Thomas Carter, began at Newark, in Alameda county, the building of cars for steam and cable roads. Carter Bros.' car shops soon grew to a large institution and did many thousands of dollars worth of business every year, turning out hundreds of cars annually. Having acquired a fortune in this enterprise, Mr. Martin Carter concluded to retire from active business soon after the death of his brother, and now lives upon the farm near Irvington, where his family of four grown sons were born and raised.

It was about a quarter of a century ago that Mr. Carter began breeding a few trotters as a recreation and pleasure, and he followed the same plan that had made him successful in car building; he used nothing but the best materials and combined them in a way where in his opinion every part would fill the place for which it was best fitted. Nutwood Stock Farm, which was the name given this farm of between three and four hundred acres of fine land, achieved success from the very first, and from it have come many champions, and now in his days of retirement from active business Mr. Carter is devoting more of his time than ever to superintending the breeding and training of the produce of his stallions and brood mares.

Few men engaged in the breeding of the American trotting and pacing horse have started out with the broad minded ideas which have governed Mr. Carter all through life. He has never been kept back by the idea that there was no other high class blood than that on his farm, but has been a liberal purchaser at sales, and sent his mares to stallions in all parts of the State that in his opinion, formed after much study and observation, were the most likely to add in building up and improving the stock he owned. Mares from Nutwood Stock Farm have been sent to such stallions as Director, McKinney, Zombro, Zolock, Stam B., Searchlight, Bonnie Direct, Directum, Kinney Lou and many others that might be mentioned, and the first mare to be mated with the great race horse Star Pointer 1:59¼ on his arrival in California was a mare owned by Mr. Carter. He has also acquired by purchase mares with the blood of Electioneer, Stehway and other high class sires, until there is now at the farm as choice a collection of well bred colts and fillies as can be found on any farm in America. Nutwood Farm is strong in what its owner calls the blood of the "Big Four"—Geo. Wilkes, Electioneer, Director and Nutwood.

Nutwood Wilkes, the premier of this farm, is now 17 years of age, and some idea of his splendid proportions, his youthful appearance and his beautifully rounded form can be obtained from the picture which occupies the center of the opposite page. The photograph of which this picture is a reproduction was taken on Sunday, the third of this month, by the writer, and has had no retouching, so that the reader can judge for himself what a well preserved and fine looking stallion Nutwood Wilkes is at the age of seventeen years. He is strong and vigorous as a colt and as fine a type of the American trotting stallion as one would wish to see.

It was at Petaluma in 1896 that Nutwood Wilkes took his record of 2:16½ in a race he won in straight heats. In that race he beat Mamie Griffin 2:12, Clay S. 2:13¾, Stella 2:15, Myrtle Thorne 2:18 and Charivari 2:20¼, one of the best fields of trotters out that year. He was a game race horse, much faster than his record, and but for an accident would have had a record of 2:10. It is, however, his accomplishments as a sire that most interests us now. His first standard performer appeared in 1897 and he now has to his credit 35 standard performers. Those to which particular attention has been directed are the following:

JOHN A. MCKERRON 2:04½, champion trotting stallion of the Wilkes tribe, champion three year old colt of 1898 with a record of 2:12¼.

WHO IS IT 2:10¼, champion three year old gelding of 1898, with a record of 2:12.

NORTH STAR 2:13½, champion three year old gelding of 1905, and winner of Occident and Stanford Stakes and Breeders' Futurity.

MISS IDAHO 2:09¼, winner of two seven heat races.

TRIAL WAVE 2:09, record made in 1905; three year old record 2:13½.

STANTON WILKES 2:10½, sire of Cavaliero 2:09¼.

CRESCO WILKES 2:10¾, three year old record 2:17.

GEORGIE B. 2:12½, dam of Miss Georgie 2:10¾.

CLAUDIUS 2:13½, a great trotter.

BOB INGERSOLL 2:14¾.

Here are ten horses with records below 2:15, five of them trotters. Three three year old trotters that held the records for the year of their sex. Is there another stallion that has sired three three year old trotters with race records below 2:14? If so his name cannot be recalled by the writer at this time.

It was in 1898 that the bay colt John A. McKerron was taken east. He had a record of 2:24½ as a two year old, made the previous year, and this he reduced to 2:12¾ at Louisville, where he met the best colts of the year. An eastern writer thus describes him:

This race, while a losing performance, was the strongest evidence of the colt's superb courage and real class, for never had a trotter suffered at the hands of his trainer more hardships than he, or been put to more heartrending tasks under the most unfavorable circumstances. Notwithstanding a course of training that was conducive to an early break down and one which in fine cases out of ten would have so shattered the constitution of the horse as to render his future valueless for racing purposes, he went into winter quarters very low in flesh, weak from excessive training, yet despite his worn-out appearance there was nothing to indicate unsoundness or break-down. At this stage of his career his real capacity had attracted the attention of Mr. H. K. Devereux of Cleveland, and so thoroughly impressed was he with the colt's rare courage, his parity of gait and his marvelous flight of speed that he determined to become the owner of such a rare combination of good qualities, even though unkind fate had brought the horse into a condition little short of a wreck. After buying the colt his new owner determined upon a course that seemed to him the only means by which the trotter could be brought back to his normal condition, and so firmly did he adhere to his original resolve that the stallion recovered from the ill effects of his hard usage and developed into the superb trotter that he is today, physically perfect and developed into a horse of great substance and rare quality.

Mr. Devereux allowed the horse to have a complete rest in his four year old form, and it was not until 1899 that the stallion was asked to show his real capacity under favorable circumstances. For the first time in his life he was given a careful preparation, was properly shod, and driven with judgment, and as a result he improved rapidly, and in August trotted in 2:09¾ in a matinee at Cleveland. That season he won the first race for the Boston Challenge Trophy, which race was destined to become the most brilliant series of amateur contests ever inaugurated, and which races have given races for pleasure an impetus that nothing else could have accomplished. In the race at Readville John A. McKerron met and defeated the very fast gelding Senator L., and the time of the fastest heat, 2:10, equaled the race record for that style of contest. At the close of that year this stallion clearly demonstrated that he was a trotter of extraordinary merit, and that his future was to be an especially brilliant one, for rarely, if ever, had there been seen a trotter with such faultless action, such perfect manners, and such a superb way of going. In his six year old form he early showed a marked improvement over his previous best form, and in addition to winning the second race for the Boston Cup, which he succeeded in doing with consummate ease, in comparatively slow time, he lowered his record to 2:06¾, and at once became a formidable candidate for championship honors. In 1902 he received a special preparation for what was destined to be the most brilliant contest ever indulged in by amateur racing men, and long before the race itself took place trotting enthusiasts were keyed to a degree of interest never before shown in any race between light harness horses. This was the third and what proved to be the final race for the Boston Trophy, and developed into the most spectacular and thrilling of the three contests that decided the ownership of the handsome cup that was offered by the Boston Driving Club. The day of the race found public opinion united on the chances of Lord Derby, for while The Monk had a few weeks previous shown rare form, he lacked the bloom that goes with perfect condition. John A. McKerron on that day was infinitely the superior of either of his opponents, and his victory was such a decisive one that it left no room for doubt as to which was the greatest matinee trotter that had been seen. In this race he fairly out-trotted Lord Derby, which horse had shown greater flights of speed than even the champion Cresceus himself, and yet which was unable to stand the pressure of having McKerron carry him a half very close to one minute. During the October meeting at Lexington the stallion gave an exhibition of the greatest flight of speed that had ever been seen, by trotting the first half in 1:00½ under restraint. At Memphis he trotted an evenly rated mile in 2:05¾, after which he was shipped to Kentucky and given the benefit of a winter at Walnut Hall. He wintered splendidly, and in the spring was a better horse than ever, carrying more flesh, and to all appearances was ready for the supreme effort of his life. Some time before the Readville meeting he developed a slight splint, which pained him considerably, and although he trotted a mile at that meeting in 2:04¾, was far from being at his best, and his performance at Syracuse, soon after, in which he trotted in 2:04½, was, all things considered, one of the most brilliant exhibitions of speed and courage ever seen, as he labored under almost every disadvantage, owing to the flint-like condition of the track, which aggravated the soreness in his leg. It was this mile more than anything he had ever done before that convinced all who saw him that the stallion was capable of approximating, if not equalling, the then existing stallion record, and whether or not he succeeds in justifying the belief in his capacity will depend only on his condition, for his speed and courage are unquestioned.

This year another three year old by Nutwood Wilkes trotted himself right into the limelight. As a two year old he had started in the Breeders' Futurity

for colts of that age, and though very short of work had won the first heat in 2:24 and been close up in the remaining heats in faster time.

This year he was better prepared for his first start, and when the Pacific Breeders' Futurity was trotted at Santa Rosa he won so handily in three straight heats in the fast time of 2:13½, 2:13½ and 2:16 that his great merit as a colt trotter was immediately recognized by every horseman who saw him win so impressively.

Two weeks elapsed before his next start, which was in the Occident Stake on the opening day of the California State Fair. For three days previous to this race his trainer, Chas. Whitehead, was very sick and unable to work or drive the gelding. The result was North Star was a little rank and when the race was started Whitehead, after failing to secure another driver, got up behind him, but found it difficult in his weakened condition to hold North Star to his gait during the first three heats. The colt had all his speed, however, and although making disastrous breaks in each of these miles finished a good second every time and in the fourth heat trotted the mile in 2:15½, the fastest heat in the history of the stake, and won handily. The next two heats and the race and first and third money were his.

One week later he started in the Stanford Stake. Again was he returned a winner, and although losing the first heat to Athasham by a break, took the next three easily and placing first, third and fourth moneys to the credit of his owner.

North Star is a large colt, standing slightly over sixteen hands. He has a most powerful shoulder with great depth through the heart, and his hind quarters are muscular and well developed, although his great development forward would cause an inexperienced person to say he was light behind. He has a tremendous stride, with much action, and when at speed his gait is regular as clock work. That he is one of the fastest three year olds ever foaled is proven by his two heats in 2:13½ in his first race this year. He was in condition to lower this mark at Sacramento had the new track not been so heavy and cuppy as to prevent fast time, but his fourth heat in the Occident in 2:15½ is considered by many horsemen as good as 2:11½ over a fairly good track. That he has gameness and great endurance was proven in the same race, his sixth heat in 2:18½ being a wonderful performance under the conditions for any three year old.

North Star is the greatest money winning three year old ever raced in California, is the only colt that ever won all three of the leading three year old stakes annually trotted in this state, and has the fastest mile by a three year old gelding in the United States to his credit this year. Chas. Whitehead considers him the greatest three year old he has ever seen and believes he could be fitted for a mile in 2:10 or better on any good track. He should trot in 2:05 or better as an aged horse.

On the Nutwood Stock Farm at the present time are quite a number of youngsters, among which are the following:

WEANLINGS.

Chestnut colt with star by Kinney Lou 2:07¾, dam Queen C. 2:28½ by Nutwood Wilkes 2:16½, grandam Queen by Venture.

Bay colt by Bonnie Direct 2:05¼, dam Georgie B. 2:12½ (dam of Miss Georgie 2:10¾) by Nutwood Wilkes.

Bay colt by Searchlight 2:03¼, dam Lida W. 2:18½ (dam of Nutwood Wilkes 2:16½) by Nutwood 2:18½.

Bay colt by Directum II, dam Lew G. (dam of Bob Ingersoll 2:14¾, etc.) by Albert W. 2:20.

Bay colt by Nutwood Wilkes, dam Bessie C. by California Nutwood, grandam Nettie G. by Anteeo 2:16½.

YEARLINGS.

Bay filly by Nutwood Wilkes, dam Bonnie Derby by Chas. Derby 2:20, grandam Bon Bon, dam of Bonnie Direct 2:05¼, etc.

Bay filly by Nutwood Wilkes, dam Bessie C. by California Nutwood. This is an own sister to Elma S.

Bay filly by Bonnie Direct 2:05¼, second dam Zeta Carter, dam of T. C. 2:30, by Director 2:17.

Brown filly by Nutwood Wilkes 2:16½, dam Lew G. by Albert W. This filly is a full sister to Bob Ingersoll 2:14¾.

Bay filly by Stam B. 2:11¼, dam Mora Mac by McKinney 2:11¼, second dam Fontanita by Anteeo 2:19¼, third dam Fontana, dam of Silas Skhmer 2:17 by Almont 33.

There are quite a number of two year olds on the farm, a few of which are being handed under Mr. Carter's immediate direction. As soon as they are broken and show evidence of speed they will be sent into a professional trainer's hands.

Mr. Carter has two young stallions of his own breeding that he is using in the stud. T. C. is by Nutwood Wilkes out of Zeta Carter by Director, second dam Lida W. 2:18½ (dam of Nutwood Wilkes) by Nutwood. This stallion has a record of 2:30 and worked miles last year in 2:20. Lord Alwin is a three year old. He is an own brother to John A. McKerron 2:04½, but is a pacer and a very fast one. He is now in the hands of Chas. De Ryder at Pleasanton. As a two year old he showed quarters in 32½ seconds and eighths in 15 seconds. He is one of the handsomest and at the same time one of the most promising young horses in California. Mr. De Ryder is also training the bay pacing mare Irvington Girl, own sister to Irvington Boy 2:18¼. She has worked a half in 1:04 and a mile in 2:14. Mamie R., a four year old sister to John A. McKerron is a trotter. She trotted a quarter in 30½ seconds for Mr. De Ryder. Grey Witch by Nutwood Wilkes, out of Little Witch by Director is the mare Mr. Carter bred to Star Pointer. She paced a mile in 2:17 this fall before she was bred.

Fred Chadbourne is also handling several of Mr. Carter's young horses. He has the very promising

ROUGH RIDERS OF THE PLAINS.

BY JOHN DICKS HOWE.

When the writer first drifted into Wyoming, thirty years ago, he was of the opinion that the broncho riders of the plains, hardened by the work they had to perform, would make exceptionally fine soldiers, especially for the cavalry branch of the service. After mixing with these hardy plainsmen on the ranches, on the train, around the camp fires, and on the round-ups, it was found that a mistake had been made. The writer does not wish to convey the impression that a cowboy does not know how to care for and manage a horse; that he does not know how to handle fire-arms, or that he lacks nerve, for there is no class of men who can teach the cowboy anything about either one or the other. Experience has taught us that it takes a certain amount of drill and discipline to make what an army officer would call a good soldier, and it is on the matter of discipline that the plainsmen would buck the hardest. In the first place, a cowboy would not stand for the airs put on by the shavetail lieutenants fresh from the military academy at West Point, nor would he submit to a form and spirit of domination and discipline on the part of his so-called superiors which is not found in any other sphere of life or service. No matter what his character or attainments may be, the private soldier gets no social recognition among his superiors, and none know this better than the plainsmen. Under the conditions now prevailing, especially in the regular army, it is absolutely inconceivable how any American citizen possessed of character, self-respect, independent spirit, and a fair degree of ambition, could wish to enter the service, when he could hire out to a cattleman and punch cattle or break horses for thrice the pay offered a soldier by the Government. Should the cowboy become dissatisfied with the work on a certain ranch, he is at liberty to pack up his things and quit on half an hour's notice. If he did this while in the army, and was apprehended and brought back, as a deserter, he would be court-martialed and sentenced to serve several years in one of Uncle Sam's military prisons.

When it comes to a comparison between the cowboy and the soldier for actual fighting and hard service, matched against either Indians or the well-drilled troops of any nation, the American cowboy can hold his own with any of them—"and then some." They may not stand at attention and salute their leaders, as soldiers are required to do; they may enter the conflict with shirts open at the neck and sleeves rolled up, and they may maintain little, if any, formation when charging the enemy, but results are what count in a battle, and that is where the cowboy would shine the brightest. If allowed to select their own mounts and firearms, a band of 250 cowboys would test the bravery of a regiment of trained soldiers, but they certainly would not enlist in the army unless they were offered a decent rate of pay and the assurance of such treatment as self-respecting, honorable, and faithful men are entitled to receive. Snobbishness on the part of superiors, petty and needless restrictions and regulations, offensive and irritating exhibitions of authority would not be endured by this class of men.

While Uncle Sam provides his troopers with a complete outfit, including horses, clothing, arms, ammunition, camp equipage and saddle equipments of all kinds, when they join the regiment to which they have been assigned, a cowboy is expected to furnish everything but the horses he is to use in his work. The broncho rider is naturally proud of his outfit, for the reason that it indicates, in a great measure, his standing among his associates. First of all he needs a saddle, which will cost from \$40 to \$75, according to the amount of fancy work on it. It is not

outfit. A piece of canvas for this purpose can be bought for \$4 or \$5, and will last for years.

A good bridle with a "spade" or "half breed" bit, will cost all the way from \$10 to \$25. The "ring" or "snaffle" bits so common in the East, are not used by the plainsmen, being of no value to them in handling unmanageable horses. An ordinary pair of spurs can be purchased for \$2.50, though it frequently happens that \$10 to \$15 is paid for a pair by a tenderfoot desiring to attract attention. Unless he possessed a lariat, a cowboy would be like a barn without a door. A forty-foot riata, made of the best rawhide, costs from \$8 to \$12, while a cheaper kind, made of woven linen, can be had for \$3.50 or \$4.

A hackamore, or halter, costs from \$3 to \$7, and is always used when breaking horses. When a cowboy is told to take a horse from one ranch or camp to another, he usually throws the lariat over the animal's neck and starts on his journey, confident that he will have a live horse on the end of the rope when he reaches his destination.

A quirt, or what a tenderfoot styles a "whip," costs from \$1 to \$3 each, and a pair of 16-inch saddle pock-

ets, if made of black Angora and fur trimmed, will take the best part of a ten-dollar bill. These pockets are almost indispensable, for it is in these that the cowboy carries many useful articles, among which may be found a comb, tooth brush, a deck of cards, tobacco and cigarette papers, a few love letters, a novel or two, and occasionally a flask containing a few doses of "snake poison."

A pair of oil tanned California calfskin chaparrajos, or "chaps," which serve a good purpose in cold and disagreeable weather, can be purchased for \$12.50, but if made of Angora goat, the amount mentioned should be doubled.

COWBOYS MEETING OLD INDIAN FRIENDS ON THE STREETS OF CHEYENNE

No cowboy ever thinks of wearing shoes or the regulation army leggings. Boots, costing from \$7 to \$10 per pair, are always worn, and are often found on the cowboy while asleep. The cowboy who would wear a pair of Arctic overshoes, even though the weather be cold and the snow deep, would be tossed in a blanket and drummed out of camp. No matter how cold the weather may get, the cowboy scorns the use of an overcoat. A heavy short coat is preferred, and a "slicker," used to keep out the cold in winter and the rain during the summer, is always strapped to the saddle.

A curry-comb is something a cowboy has little or no use for, hence it would be a waste of money, as well as a disappointment to the man, should he discover one in the "Christmas box" packed and forwarded to him by admiring friends in the East.

A pair of nippers, a hammer and a few staples should always be carried in the saddle pockets. Ten or fifteen years ago, when the ranges were open and a fence could not be found in a day's travel, these articles were not included in the cowboys' outfit, but now, with nearly every quarter section of land fenced with barbed wire, the plainsman must either cut his way through or ride many miles out of his line of travel.

When a cattleman hires a cowboy, it goes without saying that he is to feed him, and it is perhaps unnecessary to mention the fact that the cook gets the choicest parts which the range affords when fresh meat is desired. Supplies are kept in large quantities at what is termed the "home ranch," over which presides a first-class cook whose salary ranges from \$40 to \$50 per month. For breakfast he usually serves hot biscuit, flapjacks, bacon, or ham and eggs, fried potatoes and coffee. Dinner consists of either fresh meat or pork, potatoes, canned tomatoes and corn, dried apples or peaches, pie and coffee. Supper is usually served about sunset, and consists of a stew of some kind, coffee, and either stewed prunes, apples or peaches. Eggs, butter and vegetables are found in abundance at the home ranch, and a meal fit for a king often graces a table around which is gathered men who are ever ready to befriend the needy and protect the weak.

The home ranch is usually constructed of hewn logs, the rooms being large and lined with heavy

stock; to haul hay to both horses and cattle after a heavy snow storm; bring in the young calves and care for them at the ranch during extreme cold weather; secure a supply of wood sufficient to last over the winter; and "ride the fence" two or three times a week, repairing it where broken and setting new posts where required.

Situated fifty, sixty or one hundred miles from the nearest settlement, it occasionally becomes necessary for one of the men to ride that distance for a doctor, to attend a sick comrade or one who has met with an accident. Upon occasions of this kind every man is a volunteer, and though he may have to ride all night through rain, sleet or snow, following no road, carrying no compass, crossing streams and jumping ditches, with nothing to guide him save the stars or flashes of lightning, he never hesitates a second when he realizes that a human life is at stake.

As the wages paid a "top" hand ranges from \$30 to

RANCH FOREMAN AND COWBOYS

an unusual thing for a cowboy to pay from \$6 to \$10 for a Navajoe Indian blanket for his horse, while he is perfectly satisfied to use his saddle for a pillow and sleep under a common woolen blanket costing from \$2.50 to \$3.

Nearly all cowboys, whether on duty at the home ranch or on the round-up, have a piece of heavy canvas about the size of a bed-sheet, which they use in preference to a tent. While at the ranch it is usually thrown over the bunk, but on the round-up it is spread on the ground, one-half being pulled over the bedding, forming a sort of sleeping bag, to keep out the rain or heavy dew. When ready to break camp, the cowboy rolls his blankets in the canvas, fastens the roll securely with a couple of straps and throws the bundle into the wagon accompanying the

A COWBOY AND HIS MOUNT

\$40 per month, the reader may wonder how a cowboy can provide such an expensive outfit on such a small salary. A great many of the men draw no money for months at a time, for the reason that it would not benefit them if they did. The result is that from four to six months' salary is often obtained in a lump and is usually spent with a free hand.

The prevailing idea that a cowboy wears long hair and a buckskin suit, and that he sleeps with a six-shooter in each hand, is far from correct. The cowboy one meets on the plains wears a broad-brimmed hat, a blue flannel shirt, a short, heavily-lined coat, with trousers stuck in his boots, and he usually selects the best that money can buy. To offer him an umbrella, even in the worst weather, would be like flaunting a red rag before a mad bull.

The so-called cowboys one sees in Wild West shows

and dime museums, and often pictured in the illustrated papers back East, are known upon the cattle ranges as "drags." They are hired during the spring round-up and while the shipping season is on, for the purpose of herding the stock and caring for the cattle while in the cars. While the "top hands" are selecting the cattle to be driven to a shipping point, cutting out an animal here and there, the "drags" prevent the breaking up and consequent scattering of the herd. In addition to this work they are detailed to guard the herd at night, and after three or four months' labor of this kind their services are no longer required. The moment they receive their pay checks they strike out for the nearest town, where they remain as long as their money lasts, indulging in dissipation and having a good time. Occasionally one will wander back East and be picked up by some enterprising dime museum manager, but as a rule they loaf around the frontier towns and wait for the next year's work to begin, accepting odd jobs for a small amount over their board.

A six-shooter is a necessary companion for any man who is around cattle, no matter what his duties may be, for it very often happens that a cowboy is obliged to shoot a steer in order to save himself. When an attempt is being made to cut a steer out of a bunch, it will at times become wild with rage and attack both horse and rider. Wolves and coyotes frequently raid the herds and kill the calves unless the cattle are carefully guarded, and in riding across the prairie during the winter when the ground is covered with a foot of snow on the level, a cow-pony will often stumble into a badger or prairie dog hole and break its leg. In a case of this kind the animal is shot, the cowboy being obliged to pack his saddle until he can reach the nearest ranch and secure a fresh mount.

The heavy work on the ranges commences about the first of May, for about that time the grass is good and the cowboys begin to gather up the horses that were turned out to "tramp" during the winter. As the cowboys who winter at the ranches have the pick of the horses, they are as a result the best mounted. Each man has what is styled a "string" of horses, numbering from eight to ten, which he alone rides during the summer. The remaining horses are known as the "benches," and are turned over to the "drags" to ride. As these horses are practically worthless for other work than herding, the "drag" stands in little danger of being bucked off every time a saddle is placed on the animal's back.

On the round-up it is an easy matter for the foreman to distinguish the branded cattle from the mavericks, but the work of cutting out certain brands and branding the calves is no easy task for one who has not had experience in that line of work. The cows and the calves are run off into a bunch by themselves, while the beef cattle are separated from them. Though it may not appear so, the branding of a calf is a simple matter when done by an expert. Three or four cowboys who are clever with the lasso rope and drag them to the fire, where the foreman puts whatever brand is necessary upon either the hip, side or shoulder, after which the calves are released and skip back to their mothers none the worse for the rough handling.

With each round-up outfit are two wagons. In one the cook carries the grub necessary to provide the men with good, wholesome food, and over this wagon he is absolute monarch. The other contains the bedding and various necessities belonging to such a trip. If the round-up party belongs to a large company, additional wagons are provided.

As soon as spring opens up the horses become frisky and are as playful as kittens. There are some who do not fancy their playfulness, which usually consists of using all their strength and tricks to throw the rider. It is not every man who can remain in the saddle when a mean horse, or an "outlaw" is doing all that lies within him to unseat the rider, and it is a common occurrence to see half a dozen horses going one way with empty saddles, while a like number of tenderfeet take the opposite direction.

The gathering together and shipment of the beef cattle requires skill, patience and experience. If the grass along the road is good, from ten to fifteen miles per day is made. Great care and good judgment is necessary in the drive, for a shrinkage of several hundred dollars in their market value will occur on the drive if the cattle are not handled properly. While one outfit is making the drive to the railroad, another is at work on the home ranch, preparing a second bunch, so that when the first outfit returns another is ready for them. These shipments continue until the howling winds and blinding snow storms force a cessation of the work. Then back to the home ranch the cowboys go, where they grease the backs of the horses where a sore is found, turn them loose for the winter, settle up accounts and start for the nearest town for a jollification and general good time. Those who are to remain on the ranch usually return in a week or two, while the others scatter in all directions and seek employment for the winter.

The moment a band of cowboys enter a town they are immediately sized up by the city marshal and his deputies. So long as they conduct themselves properly, they are permitted to retain their revolvers, but when they undertake to create a roush house, such as riding their horses into saloons, shooting bottles off the bar, or taking a few shots at an Eastern man because he wears a silk hat, the city marshal appears and puts an end to the fun. Occasionally the cowboys defy the officers, but in nine cases out of ten the former get the worst of it.

In the early days, when the cowboys and the cattlemen made Cheyenne their headquarters, they had many exciting encounters with Jeff Carr and his little band of rangers. Carr was the city marshal, and his deputies were as brave as they were fearless. The marshal—a six-footer, well built, broad shouldered

and as strong as an ox—feared no man or body of men. Upon one occasion a band of cowboys were camped near Cheyenne, holding a big herd of cattle. Nearly every man in the outfit, from the foreman to the cook, had at some time been behind the bars of the Cheyenne jail. One morning the foreman sent the marshal a note, stating that he and his cowboys would visit Cheyenne the next morning, to have a little fun, and that if the rangers were looking for trouble they could easily find it. Jeff Carr's answer, penned in a bold hand on a sheet of official paper, was that the men would not be molested so long as they behaved themselves, but that the whole outfit would be corralled if they attempted to "shoot up" the town. The cowboys regarded this as a challenge, and appeared in Cheyenne the next morning, twenty strong, each armed with a six-shooter and with belts filled with ammunition. As they rode down one of the main streets they noticed a number of horses tied to the hitching posts in front of the city jail, where two of their men were then confined. No attempt was made by the officers to stop or disarm the cowboys, who rode defiantly along Eddy street and stopped in front of "Red Mike's" saloon. Here they dismounted, entered the saloon and ordered the bartender to set up the drinks for the crowd. This was done, not once but three or four times, when the proprietor called upon the leader for a settlement. This demand started the fun. No one was ever found who could or would tell who fired the first shot, but a good deal of shooting was done, not a bottle being left on or behind the counter.

After cleaning out the place the cowboys helped themselves to cigars, mounted their ponies and started for the city jail, to liberate their two comrades who had been arrested the day before. Looking up Eddy street the leader made out the big form of Jeff Carr riding down the street on a gallop, a dozen deputies following him. The cowboys quickly formed in line across the street and prepared to resist any attempt

JEFF CARR
Cheyenne's Fearless Marshal

to arrest them. For five minutes a pitched battle raged, no clubs or blank ammunition being used on either side. When the leader saw half of his men placed hors de combat, he waved his hat and dashed up Sixteenth street, followed by six or eight of his comrades. Close behind them was Jeff Carr and his band of fearless deputies. One of the rangers shouted to a cowboy well in the rear, warning him to halt, but no attention was paid to the command. Up went the ranger's Winchester, and down went horse and rider. Once, when the leader turned in the saddle to see how his men were faring, he looked into the muzzle of Carr's big revolver.

"Stop that horse!" was the stern command.

Before the leader could check the speed of his horse a lasso shot through the air, and in less time than it takes to tell it the rider was dragged from the animal's back, pounced upon by a couple of rangers and tied hand and foot. A few well-directed shots crippled the horses of the remaining cowboys, who were now sober enough to realize that resistance was useless. Ten minutes later the entire party, many of whom were badly wounded, were herded together and escorted to the city jail. Several of the cowboys were sent to the hospital under guard, to have their wounds dressed and stitches taken in their scalps, the remainder being handcuffed and placed behind the bars. As usual, the owner of the cattle came to the rescue of his men the next morning, when fines were paid and fresh mounts secured for those who had their horses shot from under them, Jeff Carr and his rangers escorting the cowboys to the city limits before returning their firearms.

The above is only one of many such incidents which happened when Cheyenne was a "wild town," as well as other frontier towns in the early days, and it is safe to say that there is not a cowboy from Montana to the Gulf of Mexico who has not met or heard of the most fearless officer the West has ever produced—T. Jeff Carr. Mr. Carr still makes his headquarters in Cheyenne, where he has charge of the train guards who ride back and forth on the overland trains running between Cheyenne and Ogden.

Every year the cowboys arrange a carnival at some frontier town, and it is at these gatherings that the best riders the world can produce are to be found.

The fun usually lasts four or five days, during which time the cowboys ride the worst "outlaws" to be found; they give exhibitions of skill in roping and tying wild steers; have a series of maverick branding contests; rope and ride wild mustangs; plan attacks on the stage coach by Indians, and show their Eastern friends how a round-up party goes into and breaks camp. Arrangements are always made to have a band of Indians from the reservations present, and their war dances and pony races attract large crowds. During the carnival the cowgirls have their fun, running races, riding bucking bronchos and going through the Virginia reel on horseback, a grand ball being given each evening.

Notwithstanding all that has been written regarding the cowboys and the scrapes they get into at times, they are, by long odds, the most generous and kind-hearted lot of fellows one can find in any part of the civilized world. A traveler is always given a hearty welcome at the ranches, and no party has ever stopped at one for a day or a week without getting good beds, plenty of good, substantial food, with feed and shelter for their animals, and rarely will a ranchman accept money when the stranger is ready to depart. If one should happen to find the door of the cabin closed, the latchstring is always on the outside, and no stranger is ever turned away. Such is Western hospitality, the broncho riders of the plains the host!

SUPERIOR EXCELLENCE OF THE TROTTER.

The sustained popularity of the horse shown is cause for gratification, though it is not in the least surprising. A few years ago there was much talk, originated by bicycle enthusiasts and developed to fullness by devotees of motor vehicles, about a "horseless age," when the domestic equine race should become all but extinct. It was foolish and visionary, of course, though it did find some credulous listeners; and time has effectually disclosed its vanity. Despite its mechanical competitors, the horse is steadily growing in favor and in interest, and also in use; and it will doubtless continue to do so. It has many uses, both for business and for pleasure, which it is not to be expected any mechanical device can ever satisfactorily discharge, just as with all our development of "labor saving" machinery hand labor is still and doubtless will always be necessary.

While the success of the horse show, year after year, is agreeable to contemplate, however, it would be much more pleasing if more attention were paid there to the pre-eminent American type of horse. We mean, of course, the trotter. In all the history of man's improvement of the lower order of animated life there is probably no chapter more noteworthy or more creditable or that signifies more for the practical advantage of mankind than that which tells of the development of the American trotting horse. It would probably be judicious to consider that animal the most truly valuable of all equine types. There are others of great worth and of engaging characteristics. The "thoroughbred" has a longer and more picturesque history and is of much value. But for "all-around" service, for business use and for pleasure driving, for work and for play, it is outranked by the trotter. It is true that in the changed status of the horse which is being brought about by the invention and introduction of motor vehicles the trotter will have to meet a stronger competition than the runner. Nevertheless, the time will not come in this generation or the next when this typical American horse will be conspicuously less useful than now.

Into the vexed questions of the origin of the trotter and his influence upon other strains we shall not enter. That way madness lies. The advocates and adversaries of Hambletonians, Morgans, Stars, Clays, Messengers, Abdallahs and what not may wage their wordy wars at will. Also it may be said that our trotting stock enters or does not enter into the numerous other strains which are so popular. All these questions are aside from the real one. The point is that the American trotter, not as the part progenitor of ponies or hackneys or any such thing, but as a trotter pure and simple, is the most useful and the most valuable of all horses, and is second to none in beauty of form and action and in practically all the elements of attraction. Moreover, it is the one type of horse that is distinctively American in origin and development. Whether trotting races will ever, at least in and around New York, outrank running races in popular and "sporting" favor may be questioned. At least those who are not merely using racehorses as money making machines, but who take the amateur's true interest in the culture of the noblest of all animals, would do well to give to the typical American horse the rank which he so abundantly deserves.—N. Y. Telegraph.

TOOMEY TWO-WHEELERS—THE MOST POPULAR RACING AND TRAINING VEHICLES.

For years the Toomey Two-Wheelers have headed the list as the most popular and up-to-date racing and training vehicles on the market. The 1905 records show that again the Toomey is the leader, having been used by the large majority of the best horses and the largest money winners on the turf.

The firm of S. Toomey & Co., Canal Dover, Ohio, are the pioneer sulkies of the world and by their keeping in constant touch with the needs and requirements of both horse and driver, have been successful in producing sulkies and carts that are unequalled by any on the market.

Their sulkies and carts for next season will embody some very valuable improvements. Horsemen who want the best that money and expert labor can produce cannot go amiss in buying the Toomey. Before making up your order for next season's sulkies and carts, be sure and give the Toomey vehicles your favorable consideration.

Latest catalogue will be gladly sent free on application. Address S. Toomey & Co., Canal Dover, Ohio, U. S. A., or O'Brien & Sons, 500 Golden Gate Ave., San Francisco, Cal.

THE GODOLPHIN OF THE WILDERNESS.

A Sketch of Belmont (b. h. 1847) California's Greatest Sire in the Pioneer Days, by One Who Knew Him Better than Any Other Man Now Alive.

BY HIDALGO

Some time in 1827 Congress granted to Commodore Robert F. Stockton, U. S. N., for meritorious services in our navy, a large body of land in Ohio, lying on what was known as the "Western Reserve." The Commodore lived near Trenton, N. J., and one of his neighbors was Garrett Williamson, who had a son about seven years old named Henry; and two daughters, one of whom married subsequently a man named Furman, an educator, while the other became the wife of Dr. E. M. Gard, father of George E. Gard, who held at different times the offices of sheriff, United States marshal and chief of police at Los Angeles. Anxious to remove his horses to some place where good pasturage could be had cheaply, the Commodore secured the services of Garrett Williamson to take charge of his farm and sent with him to Ohio the following named horses:

TRUSTEE, imported ch. h., foaled 1829 and ran third to St. Giles and Perion in the Derby of 1832; and defeated Margrave (St. Leger winner of that year) for the Claret Stakes of 1833. He also was a full brother to the Derby winner of 1835, the coarse and powerful Mundig; and a half-brother to Cotherstone, who won the Derby of 1843, as well as to Mowerina, dam of West Australian, the first horse to win the "triple crown."

MERCER, ch. h. by Emilius, out of Young Mouse, winner of the One Thousand Guineas of 1829, by Godolphin, son of Partisan. Mercer got Free Trade, who won the first and fastest heat of the great Pot

PERSIMMON

From Capt. Merry's Book, "The American Thoroughbred"

CAPT. THOS. B. MERRY
(Hidalgo)

Stake on Long Island in 1848, in 7:33½. The second heat was taken by Bostona and the third and fourth by Tally Ho, both these being by Boston. Free Trade was distanced in the third heat.

AMERICAN BOY, b. h. by Van Mater's Sea Gull, out of a mare by imported Expedition, who got the dam of Medoc (premier sire of America in 1840-41) and who was also the sire of Sea Gull.

Of the dozen mares taken to Ohio by Mr. Williamson it is only necessary for me to enumerate two.

PRUNELLA, imported, b. m., 1833, by Comus, son of Sorcerer. Her dam was by Partisan (b. h. 1811), out of Pawn 1808 (own sister to Penelope, dam of Whalebone, Whisker and Woful; second dam of Glencoe and third dam of Bay Middleton) by Trumpator from Prunella (dam of Waxy Pope, Derby of 1809) by Highflyer. This is the number one family of Bruce Lowe's system.

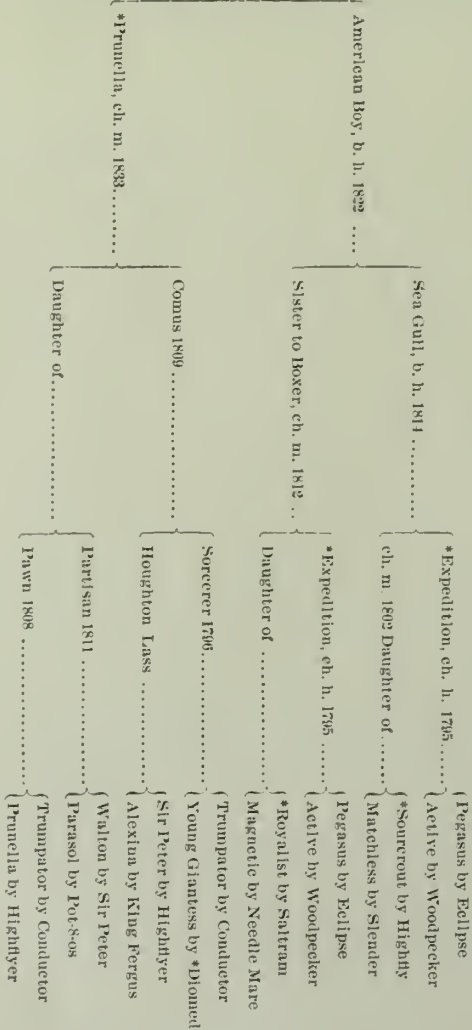

LADY MOSTYN, imported, by Teniers (son of Rubens and Snowdrop by Highland Fling), out of Invalid by Whisker, Derby winner of 1815 and sire of two St. Leger winners. She was the third dam of Venture, trotting record 2:27½. After Grey Medoc ran that memorable dead heat with Alton at New Orleans in 7:35, he was brought up to Cincinnati, where his owner, George R. Kenner, resided. Mr. Williamson mated Lady Mostyn with him and she produced a filly called Fanny Mostyn; and she, in turn, was mated with American Boy Jr., also the property of Mr. Williamson, and produced a bay filly called Miss Mostyn, who crossed the plains to California in 1853 and subsequently, to the cover of Belmont, produced Venture, ch. h. 1863, record 2:27½, and the only thoroughbred stallion that ever got into the 2:30 list.

Prunella was a very shy breeder and produced only two foals after landing, of which Belmont was one. He figures quite as much in trotting and pacing pedigree as he does in those of the gallopers. Now there

is a pedigree hot enough to cook ham and eggs, but "the frozen truth" is that the horse's name was really not Belmont but Belle Mount. In 1842 Garrett Williamson severed his connection with the Commodore and bought a farm in Springdale, Hamilton county, about ten miles from Cincinnati, where he established what he called the "Belle Mount" Stud. There American Boy stood at \$40 the season (a pretty big fee in those days, by the way), Grey Medoc at \$50 and Cadmus (son of American Eclipse) at \$25. Trustee had been sent to Kentucky and Mercer was dead. Fashion was really the only good performer that Trustee ever got in the north. Revenue, Reube, John Black and D'Alma were Southern productions.

One of the Commodore's mares above named was an English mare which he called Prunella, after her distinguished ancestress by Highflyer, which I deem the greatest mare in the English Stud Book because every great performer of the present day has from twenty-five to thirty crosses of her and from twenty to twenty-five of Penelope, her best daughter. The relationship between Belmont in America and Whalebone, Whisker, Woful, Glencoe, Bay Middleton and Lord Lyon in England, will be seen by the annexed tabulation:

BELLE MOUNT, b. h. 1847.

By the above table it will be seen that Belmont was strongly inbred to Trumpator, the horse that

saved the male line of Matchem (foaled in 1748) from total extinction. This line generally carries a great deal of bone and substance, but very little quality. Belmont, on the other hand, was full of quality and rather light of bone, cutting off considerably at the knee. After his death I examined his high forward cannon bone, which I found to be as blue as slate and hard as steel. It is easy to account for his quality, for his grandam was by Partisan, by long odds the handsomest horse of his day; and his sire was inbred to Expedition, an exceptionally handsome horse. No one would have supposed, to look at him, that he had a cross of Sorcerer within ten generations.

Henry Williamson was a typical pioneer on whom the mantle of Daniel Boone had fallen. He stood about six feet, four inches in height and was a prominent mover in the emigration of 1843 to the new land of Oregon. He was a man of sterling integrity and believed that a stain on a man's honor was worse than a wound in his heart. He was a man of devoted and sincere friendships, as witness the fact that he broke his journey at Brown's Hole on Green River (in what is now Wyoming) to nurse and care for his companion, Joseph S. Smith, and did not arrive in Oregon until September, 1844. How did the plous ingrate repay that goodly office? He died in 1888, leaving a fortune of over \$600,000, not one dollar of which went to the man who not only nursed him for an entire year in a desolate region beset with hostile savages, but also twice loaned him money to live on, after their arrival in Oregon, until he could obtain employment on the building of the first vessel ever built in that State. Smith told me that himself. I am aware of an old Roman motto: "De mortuis nil nisi bonum," but I believe the author of that maxim was a premature life insurance president.

Henry Williamson remained in Oregon until 1849. He took up a quarter section of land in Benton county, and his friend, Frank Depoistre, who came across the plains with him, took up an adjoining quarter, in what is now the north end of the beautiful little city of Corvallis. Now contrast Frank's case with that of Congressman Smith. When Henry Williamson (through no fault of his own, either) was forced into bankruptcy, in 1855, Frank Depoistre sold his land for \$1200 and came down on horseback to Monroeville, to serve his old friend, only to learn that it would not pay one-twentieth of the debts for which Monroe & Williamson had been attached. Frank did all he could and a hero could have done no more. He died about four years ago, a poor man in this world's goods, but a rich one in the esteem of all who prize true manhood and unselfish friendship.

Henry worked in the mines until 1852, when he came down to Marysville with about \$22,000. He met a man there named Uzal P. Monroe, who came here from New Jersey, having been born about four miles from Henry's birthplace. A spontaneous friendship sprang up between them, such as seldom occurs in this less rapid period; and they went over to the mouth of Stony Creek in Colusa county, where they purchased a piece of land from A. C. St. John and proceeded to lay off a townsite which they called Monroeville. This was the head of easy navigation on the Sacramento, although boats had gone as high as Tehama on high water. They purchased a side-wheel steamer called the Express, which made two trips weekly between there and the capital. Following is a partial list of her officers in 1854:

Captain	James A. Morgan
Pilot	William Pierce
Purser	John F. Willis
Chief Engineer	A. C. Zimmerman
Assistant Engineer	Bolivar Hight
Steward	E. B. Collins
Mate	S. B. Gamage
Watchman	Thos. B. Merry

Connecting with this boat was a tri-weekly line of stages to Shasta, of which Henry Williamson was

agent at the latter place until he went East in February, 1853, when his brother, Dr. Jonathan Williamson, afterwards surgeon of Col. Conner's California regiment during the Civil War, took his place.

Henry left Cincinnati in March, 1853, with four wagons, bound for St. Joseph, Mo., which was then the great starting point for all the west-bound wagon trains. His chief features in the train were the stallion Belmont, six years old; Maria Downing, ch. m. 1844, by American Eclipse out of Red Morocco's dam by Tiger; Liz Givens, b. m. 1847 by imp. Langford, out of Charlotte Pace by Sir Archy; Fanny Mostyn, br. m. 1846 by Grey Medoc, out of imp. Lady Mostyn by Teniers; three yearling fillies by Cadmus, Trustee and Laplander, out of the three mares above named; and the fifteen-year-old stallion American Boy Jr., which lacked one-thirty-second of being a thoroughbred horse. The latter got Fanny Branham, the second dam of the well-known trotting horse James Madison 2:17½.

The trip across the plains was comparatively uneventful and all arrived safely at Monroeville in September except one of the yearling fillies that died on the way. Henry went back to Shasta as agent of the stage line and the doctor began practice in San Francisco, in an old wooden building where the Occidental Hotel now stands, known as Harry Meigs' music hall.

William M. Williamson, Henry's youngest brother, came out in the train and brought with him his wife and two children, both of whom died in the following year. No sooner had William arrived at the landing than Monroe began to be conspicuous by his absence. The truth was that he was spending most of his time in Marysville and gambling off money as though he had millions. One day at Sacramento, the agent, W. Arnold, called on Purser Willis for money to pay some back charges on cargo received from San Francisco. It was raised with difficulty and paid. The next trip the same thing occurred and there was no money forthcoming. The boat was tied up for debt and we were all discharged, with at least twenty days' pay due us. Come to find out about it, Monroe had not only squandered over \$16,000 in nine months but had also given the firm's notes for half as much more to Albert G. Toomes, William G. Churd and a dozen others living along the river. The total indebtedness was somewhere about \$55,000. Henry put the horses into his brother's name to avoid attachment; and then, fortified against any further trouble on that score, kept on meeting his share of the indebtedness till, in 1863, he had discharged all of his liability to the creditors.

Belmont stood at Monroeville in 1854 for \$40 the season. On the bills, the "copy" for which I wrote myself, his name is spelled "Belle Mount," which was the name of old Mr. Williamson's farm at Springdale.

In 1857 Henry began making trips up to Oregon and driving down American-bred cattle that had just come in off the plains, while William removed to San Jose, taking with him his nephew, George R. Furman, who had ridden Belmont across the plains.

In the winter of 1858 Henry went East and came out in 1859 with a drove of pure-bred Devon cattle, the first that had ever been brought to this State. Belmont (as everybody here pronounced the name) stood at \$50 in 1855, \$75 in 1856 and at that rate until 1860, when the victories of Owen Dale, Bonnie Belle, Langford and a dozen others caused Henry to raise his fee to \$100, at which rate he stood till the time of his death in 1866. He was struck on the hock by an ignorant groom while currying him. A sore developed there and Henry kept neglecting it until it became chronic and could not be cured; and thus was lost to this State one of the grandest and most valuable horses ever foaled on American soil. If you want a correct idea of how he looked, take my book, "The American Thoroughbred," and, on page 36, there you will find a portrait of Persimmon, the King's horse that won the Derby. From the saddle hack, the resemblance to Belmont is simply perfect. There is also an almost exact likeness in the head and neck, but the placing of the shoulder is quite different. Belmont's value, as a sire, does not end with the thoroughbreds of his get. He was the sire of Venture 2:27½, the only thoroughbred stallion that ever broke into the 2:30 list. As the sire of the dams and granddams of trotters in the 2:30 list, Belmont makes twice as big a showing as any horse, strictly thoroughbred, that ever stood for public service in America. Not only that, but his sons—Owen Dale, Langford, Correct, Ben Lippincott and one or two others of less note—are already inscribed as sires of the dams and granddams of 2:30 performers. In 1893 Mr. William G. Layng, who succeeded me as editor of the Breeder and Sportsman, compiled a list of 2:30 performers descended from Belmont and his sons, a perusal of which I most earnestly commend to those breeders who think that the modern light-harness horse can get along without an infusion of thoroughbred blood to impart staying power. It may teach some men that, while they know a great deal, they have yet much to learn about breeding.

The first thoroughbred horse foaled in the State was Langford by Belmont, out of Liz Givens by imported Langford. He won the two-mile heats at Napa, beating the Kentucky horse Ashland, who won the first heat. Ashland had previously beaten Owen Dale at four-mile heats. These horses were then matched at four-mile heats for \$10,000 and Langford won in the first heat in 7:43, Ashland being drawn. Langford then distanced Susy Hawkins, four miles, at Marysville, in 7:58. Then his owner challenged any horse in America to run four miles for \$10,000, the acceptor to receive \$2500 for expenses. No response was ever received to this bold defiance and Langford, after winning two more races, broke down in a two-mile race won by Dashaway, also by Belmont.

As an individual, Belmont was something superb. He had as handsome an eye as ever was placed in any horse's head; and he had a head that looked as if

modelled by a sculptor. His shoulder, though a trifle straight, was strong and not "loaded," like that of some thoroughbred horses. His gait was simply perfect. John Bonman, who founded the first line of omnibusses in San Francisco, had him in his stable on Market street in 1858, and told me that he broke him to harness and drove him a mile to wagon, on the Pioneer track, in 2:59. I saw Patrick Green drive him a mile to wagon in 3:03, with very little urging; and both Joseph T. Hunter and myself rode him around the old Oakland track that stood where the S. P. shops now stand, miles in 3:03 to saddle. He was the fastest walker I ever rode or ever saw; and I honestly believe he could walk five miles an hour. I have frequently ridden him from Henry Williamson's house to the old ferry at the foot of Broadway, over six miles, in an hour and twenty minutes, without once breaking into a trot. Langford could trot in 3:10 under his blankets, and was also a fast walker. Owen Dale could trot in 3:15 easily and was the handsomest horse he ever got. Senator Stanford would never have bought little Don Victor if Owen Dale had been alive. Don Victor was Owen Dale's full brother, but no such race horse nor was he any such individual. The blood of Belmont is diffused through many valuable trotters and some very good gallopers. Borghesi, winner of the handicap at Los Angeles on the 2d inst., had a daughter of Belmont for his granddam.

This horse is called Williamson's Belmont, in contradistinction to the Kentucky-bred Belmont by Alexander's Abdallah. Had Williamson's Belmont not gotten Venture 2:27½ no such distinction would have been necessary. Though his fame, as a sire of trotters, rests upon the performance of a single horse, the benefits conferred by him upon the trotting turf are widely spread and far reaching; and in concluding this brief sketch of a noble animal that was to me a dearly-loved companion, I am compelled to echo the words of Brutus at the grave of Caesar and say, "Take him for all in all, we shall not look upon his like again."

HIDALGO.

BRED RIGHT FOR A SIRE.

In the horse breeding business, as in every other, those who make the largest profits are they that are "there with the goods" when the demand comes from the public for a certain brand. The McKinnies have had the call for the past few years, and it will only be a very short time until certain sons of this great stallion that are now young and almost untried in the stud will be at the very top of the list as popular sires. Zombro 2:11, the greatest three-year-old Cali-

a record better than 2:10, as she possessed that speed. She was by Stamboul 2:07½, a sire of trotters, not one of his list of fifty standard performers being a pacer. Stamboul was the handsomest stallion of his day, the Adonis of the trotting turf as it were, and he has imparted this quality of beauty to his get in a marked degree. Seventeen of Stamboul's sons have sired forty standard performers, and of these but six are pacers. Twelve of his daughters have produced seventeen with standard records, all trotters.

The second dam of Bonnie McK is that great brood mare Bon Bon 2:26 by Simmons. She is the dam of Bonnie Direct 2:05¼, (champion of his year and sire of Bonafet 2:09¼, champion three-year-old pacing filly), of Bon Silene 2:14¼, trotting, and of the handsome stallion, Bonnie Steinhay, that has paced several miles around 2:10 in his work and will be given a low record next year. Her sire, Simmons, by Geo. Wilkes, is reckoned one of the great brood mare sires. He sired the dams of Fereno 2:05½, Bonnie Direct 2:05¼ and some thirty more with fast records, while his sons are also producing great speed through their daughters, as witness Gossiper, sire of a dam of Zolock 2:05¼ and others. Simmons himself was out of a great brood mare by Mambrino Patch, the sire of so many great brood mares.

The third dam of Bonnie McK is Bonnie Wilkes 2:29½ by Geo. Wilkes, his fourth dam Bett Willey, a thoroughbred mare by Bob Johnson, so of the mighty Boston, sire of Lexington, and her dam May Willey by American Eclipse. The first, second and third dams all have standard trotting records, and his first four dams have all produced horses with standard speed. "Breed in producing lines" is now the slogan with breeders who aim to produce the best, and Bonnie McK fills this bill as a sire.

Few young stallions have the beauty of conformation and strong individuality that this son of McKinney possesses. He stands 16¼ hands high, weighs 1100 pounds and is liberally endowed with substance and finish. He has as perfect a set of legs and feet as any horse that lives, and with wise breeders this is the very first consideration in selecting a sire. He has been worked some and has repeatedly trotted miles around 2:20, his fastest trial mile to date being one in 2:19, with a half in 1:06½ and a quarter in 32 seconds.

He was bred to three mares in 1904 and has three weanlings. In 1905 he served nine mares, and as evidence that those who patronized him have faith no less than seven of the mares bred to Bonnie McK in his speed string abilities, it can be stated that are nominated in the Pacific Breeders' Futurity, which closed on the 4th of this month. His weanlings are

BONNIE MCK., SON OF MCKINNEY 2:11¼ AND BONSIENE 2:11½

ifornia ever saw, led the way; Zolock 2:05¼ has attained a popularity that is bringing his owner large profits, and in the very near future there will be other sons whose fame as sires will be heralded throughout the country by the performances of their get. It will be the sons bred in producing lines, endowed with natural speed and having strong individuality that will reach this position of popularity, and if there is one in California that bears all these marks of future greatness, it is the handsome young stallion and registered stallion, Bonnie McK, 36:56½, owned by Mr. George A. Kelley of Pleasanton.

Bonnie McK is bred right to make a great sire. He fills the requirements of the rule laid down by all intelligent and up-to-date breeders, which demands that a great progenitor of speed should come from a great sire line on his sire's side and a great brood mare line on his dam's side. His sire is the great McKinney, sire of forty with records of 2:15 or better, twenty-eight of which are trotters. McKinney's sire was Aleyone, a wonderful sire by Geo. Wilkes, greatest of all sires, and he by old Hambletonian 10, the corner stone of the trotting edifice.

The dam of Bonnie McK is Bon Silene 2:14½, one of the great race mares bred in California and one whose beauty of conformation and perfect gait made her noticeable in any company. She should have had

the talk of Pleasanton, where they are no longer led to halt on the famous track there, and the natural speed and high-class appearance have attracted much attention.

Bonnie McK will be in the stud during the season of 1906 at \$50 for the season. Mr. Kelly, who is in every way a responsible man, states that he will return the service fee to all owners who have their mares of 1907 a standard record.

BUFFALO BILL KILLS HIS HORSES.

A dispatch from Marseilles, France, dated December 7th, says:

All the horses belonging to the Wild West Show of Colonel William F. Cody were killed here to-day. Although the government veterinarians had certified that glanders had been entirely eradicated from the stud, Colonel Cody and his partner, James A. Bailey, decided on this radical measure in order to allay the fears of the farmers regarding the spread of the disease.

The saddles, bridles and other articles of the equipment, as well as the clothing of the stablemen, were burned, and the railroad cars belonging to the show disinfected. Colonel Cody is now in the United States engaged in purchasing a fresh stud.

DECLINE OF THE DIOMED DYNASTY.

For Seventy Years Descendants in the Male Line of the First Derby Winner were the Leading Sires of America; Now They Cut an Inconsiderable Figure—Reign of the Family Ended with Lexington—Important Facts for Breeders to Know.

BY RALPH H. TOZER

One hundred years ago the blood of Diomed, the first Derby winner, was as much sought after in America as is the blood of St. Simon and Flying Fox in England and France at this moment. Top Gallant Duroc Truxton and the unbeaten Ball's Florizel among others had made Diomed's name a synonym for sterling merit as a sire of racers. With the advent of Sir Archy and Potomac, two great racing champions, the craze for the blood of Sir Charles Bunbury's former racing celebrity was at boiling point, and when the Sir Archy stock came out and vanquished with ease the supposed best racers of the land, and for years sustained the reputation he had made as much the best sire ever known on this continent, with Vanity, Lady Lightfoot, Reality, Timoleon, Sir Charles, Betsy Richards, John Richards, Henry, Bertrand, Flirtilla, Sally Hope, Kate Kearney and Gabriella to his credit—all regarded as showing championship form at some time during their careers—the triumph was a complete one. I make the statement that Sir Archy's equal as a sire never lived in this country, and I very much doubt if his like was ever known in any part of the earth, great as were Sir Peter, Touchstone, Stockwell, St. Simon, Flying Fox, Musket, Chester, Yattendon, Buccaneer, Boston, Lexington, Imp. Leamington, Imp. Bonnie Scotland, Imp. Glenelg, Imp. Ormonde, Hanover, Imp. Meddler and Hamburg. They could not show such a bouquet of first-class racers as I have mentioned above, for those horses were nearly all four-mile heat runners that traveled hundreds of miles on foot over a rough country in order to meet gallopers worthy of their steel. Volumes could be written of the achievements of this baker's dozen of racing stars by Sir Archy. And when American Eclipse, a grandson of Diomed, swept everything before him and retired from the turf unbeaten, when Sir Charles went to the stud recognized as a champion racer and proved fully as good a sire as turf performer, heading the winning stallion list of America in 1830, finishing second in 1831, first in 1832, second to American Eclipse in 1833, first in 1835, 1837 and 1838, it was a case of Diomed blood first and the rest nowhere.

Sir Charles and American Eclipse, with Timoleon, Sumpter and John Richards for good measure, kept the Diomed blood in the eye of the public for many years, and then came another Sir Archy to be a champion of the turf as well as of the stud, Bertrand, a native of South Carolina. Scarcely inferior was Bertrand's brother, Pacific, who stood in Tennessee, or Arab, Stockholder and Gohanna, also sons of Sir Archy. For a time Imp. Leviathan and also Imp. Glencoe and Imp. Priam, somewhat dimmed the luster of Sir Archy or Diomed family's star, but there were so many good ones of the dynasty that, as a family, they were in the lead in this country, and Medoc, son of American Eclipse, came up prominently in 1839 through being second on the winning stallions' list to Leviathan, and in 1840 and 1841 held the post of honor for the Diomed dynasty again. Birmingham, a son of Stockholder (by Sir Archy) began to loom up prominently in the early '40's in Tennessee, where Arab was also. I might here mention that in 1829 was foaled the great racer Betsy Malone, by Stockholder. This mare started in twenty-two races, most of them at heats of three miles, and was defeated on but one occasion, through falling to her knees. I bring Betsy Malone in here because she is the ancestress of three of the horses of the male line of Diomed worth mentioning in this day, and they lack a lot of being good sires. Reference is made to Rey del Sierras, El Rio Rey and Emperor of Norfolk.

In the late '40's the Diomed family (Sir Archy branch) drew well ahead again in the race for sire honors, Boston, "Old White Nose," pride of Virginia, winner of forty races in forty-five starts, and a hero even in the defeat given him by the New Jersey mare, Fashion, in 1842 at Union Course, Long Island, being the medium. For many years the star of Boston shone much brighter than that of any other luminary in the horse constellation. Boston was foaled in 1844, Tally-Ho in 1845, Red Eye in 1846, Nina in 1848, Lexington and Lecomte in 1850, and all were put in the category of "great racers," besides which Boston begot many that were but little inferior to the celebrities mentioned in point of racing ability.

Lexington, foaled in 1850 at the farm of E Warfield, Lexington, Ky., was the speed marvel of the age, and in 1854 Lecomte administered the only defeat Lexington ever sustained, the first heat of four miles being run at Metairie Course, New Orleans, in 7:26, a cut in the record of six and a half seconds, Fashion having beaten Boston May 10, 1842, in 7:32½. As showing how phenomenal this was considered at the time (1854) it will be noted that the best time of the following turf notables was: Henry 7:37; Grey Medoc and Altorf (dead heat) 7:35; Boston, fastest heat he won, 7:40; Fashion 7:32½; Miss Foot, second heat, 7:35; George Martin, when the great mare Reel, dam of Lecomte, broke down, 7:33; Free Trade 7:33. Thus it was that when Richard Ten Broeck, who, by the way, died at Redwood City, this State, about thirteen years ago, offered to run Lexington over the Metairie course against the fastest time ever made in America for the sum of \$10,000, one-fourth forfeit, he was taken up with dispatch, the acceptors of the challenge being Colonel Calvin Green and Captain John Belcher of Virginia.

It is history that Lexington on April 2, 1855, with 103 pounds up, Gil Patrick riding, ran the race against Father Time, and not only won it, to the surprise of the majority of onlookers, but cut the record from 7:26 to 7:19½, the last mile being accomplished in 1:48¾. Lexington wiped out his only defeat on April 24, 1855, when he easily defeated Lecomte, 103 pounds to Lecomte's 100, in 7:23¾, the latter being withdrawn in the second heat. Lecomte, who weighed 160 pounds less than Lexington, was afterward taken to England by Mr. Ten Broeck and was undoubtedly a great horse. Lexington, whose earnings footed up \$56,540, was taken to Kentucky and R. A. Alexander paid \$15,000 for the great racer after his racing days had come to a close. This was considered a tremendous price in those times, and especially large as Lexington went blind. Mr. Alexander declared to the men who scoffed at him, and made besides a large wager, that he would yet "sell one of Lexington's colts for more than he gave for the old horse." This he did in 1864, when the war was at its height, securing \$15,000 for Norfolk, Theodore Winters of California being the purchaser and the late James Eoff contributing the extra dollar, so that, through the stubbornness of the then owner of Norfolk and the rich California miner, the deal would not fall through. Norfolk was never beaten, and after defeating the best colts at the East in the Jersey Derby and one other race was brought to California, where he downed the game Lodi in a big match race in

RALPH H. TOZER
Racing Secretary and Handicapper

this city and twice later on at Sacramento in two and three mile heat races, the time made in 1865 in the latter still being the best on record. Asteroid, by Lexington, also retired unbeaten, and the question of their racing ability was discussed over the East before Norfolk was brought out to the Coast. Kentucky was beaten by Norfolk, and that was his only defeat in five seasons on the turf, he winning twenty-one races. All these flyers were from Glencoe mares. Idlewild, the aged one-eyed mare that afterward produced the grand racer and sire Wildidle, was the first of the get of Lexington to bring him great fame. She was foaled in 1859. In 1862 came Harry of the West, who, if memory serves, in 1867 won seventeen races in succession, a majority being at three-mile heats. Of course the war and the confiscating of all the race horses the contending armies could lay hands on virtually killed racing, but Salina, Harry Bassett and Tom Bowling were real champions in the early '70's, and Duke of Magenta, foaled in 1875, the last year of Lexington's life, was also a first-rater.

With the death of Lexington came the decline of the Diomed male line, and it has continued in its decadence to the present day, when its best representatives are Rey del Sierras, by Joe Hooker, and brother to Yo Tambien, El Rio Rey, by Norfolk, and his brother, Emperor of Norfolk. The latter is the only one of the trio that has sired real simon pure stake horses, those being Rey del Carreres (Americus) and Cruzados.

There were many great racing sons of Lexington, but with the exception of Norfolk and Colton none could be accounted good sires. War Dance, who was out of Reel, the great daughter of Imp. Glencoe, was not a good race horse, but he did get some very good winners, the best being Modesty and L'Argentine. Bullion, son of War Dance, was a fair sort of sire, and Grinstead, a grandson of Lexington, was the best stallion in California for many years, his daughters being excellent producers and his sons practically failures as sires. Gano and Santiago, however, getting a few fair gallopers. Pat Malloy, Jack Malone, Uncas and Wanderer got some winners, but were not very high-class sires. However, mares of the first two named are generally great producers. Joe Hooker, son of Monday, he by Colton, was a success at the stud, and his daughters are proving high-

class producers, one of them giving to the world the game little Sir Walter, winner of \$128,000, another Candelaria, a stake horse, but bar Rey del Sierras and Yo El Rey, his sons, have accomplished nothing as sires and this pair have as yet not sired real stake horses. Thus, the chances for a resuscitation of the male line of Diomed, which held sway for nearly three-quarters of a century, rests, as far as I can see, upon Cruzados, a stake horse by Emperor of Norfolk from a Grinstead mare, thus having a double cross of Lexington.

The question now naturally arises, what caused the decadence of the line that proved its superiority for such a long period in America? I have given the question much thought, and the solution seems to be found in the fact that too much blood was used of the sires that begot a very much larger percentage of good females than males. Boston, sire of Lexington, got more good males than females, hence it was natural that Lexington, his best racing son, should be a wonderful sire. But should the sons of Lexington "breed on?" No, I answer, for the reason that a majority of the mares bred to Lexington were by Imp. Glencoe, a number by Imp. Yorkshire and some by Imp. Albion, all famous for the production of extra good mares and few good sires, the last named two none of note. The Lexington blood was so popular that the sons of Lexington from Glencoe and Yorkshire mares were bred to mares with another infusion of Glencoe, or perhaps Imp. Eclipse and probably back of that Medoc, Trustee, American Eclipse or Stockholder, again all sires of females far superior to the males, as turf history will show conclusively. Result—A general weakening of the male line and a strengthening of the female side. The Lexington mares, as a class, were seldom equalled at the stud, Glencoe's daughters alone rivalling them, and many of the champions were by Lexington from Glencoe mares, like Norfolk, Asteroid and Salina.

Had the breeders of the '70's known as much as breeders do to-day of the tendency of horses to beget good males or females, as the case might be, the Lexington brand of Diomed would not occupy the unhappy position that it does to-day, and the answer of the Kentucky school boy to his teacher, who asked what "well bred" meant—"three crosses of Lexington"—would not be thought correct, unless one wanted a good brood mare.

And to-day breeders should ask themselves, before breeding to any horse, what are his characteristics? Does he beget better mares than he does males? If so, I would not care for him, for there are plenty of mares in this country bred on lines that should insure their doing well at the stud, but few stallions so bred that one could count on their proving sires that would "breed on" best through their sons.

With a view of bringing the Diomed dynasty (Lexington branch) into power again, I have prepared a table for the use of breeders, showing the characteristics of the various high-class stallions since Lexington's time (he died in 1875). History shows that the sires of a larger number of extra good male than female turf performers prove the most desirable, for the reason that their sons "breed on." Anyone possessing a stallion of the male line of Diomed should use mares full of the blood of the sires in the first table—sires of a larger number of good males than females. The blood of the horses contained in the second table should be avoided religiously by owners of stallions with lots of Lexington, Glencoe, Yorkshire, Albion, Medoc or American Eclipse blood, while the blood of horses in the third table can be used at will, and found good, but if you wanted to have a sire that would "breed on" you would use the blood of the sires represented in the first table as much as possible.

Sires of a Larger Number of Good Male Than Female Performers.

Imp. Leamington	Fonso
Polus	Lamplighter
Virell	Farandole
Spendthrift	Imp. Hermence
Imp. Ormonde	Imp. Phaeton
Hindoo	King Alfonso
Imp. Mr. Pickwick	Imp. Rayon d'Or

WHAT A STATE FAIR SHOULD BE.

BY ALBERT LINDLEY.

Secretary California State Agricultural Society.

As secretary of the State Agricultural Society I accept, with pleasure, the opportunity to give to the readers of the Breeder and Sportsman the plans that have been formulated by the society's directors, and my personal ideas of how our State Fairs may be made a credit to California and become what it was intended they should be, an annual industrial exhibition for the education and amusement of the farmer, stockraiser and producer; a festival given each year by the State that it may encourage the increase of its products, in variety and quantity, and improvement in quality by offering adequate medals, prizes and cash premiums for the best of anything produced anywhere within its borders; a holiday devoted particularly to the entertainment and instruction of the country people.

In my opinion we must first get back to the old-fashioned State Fair; that is, a fair where a \$5000 bull will have a chance to win as much in a contest that lasts a whole week or more, as a \$400 thoroughbred can win in a contest that lasts two minutes or less. A fair where the owner of a great herd of Holstein or Jersey cattle, who has twenty-five or thirty head on exhibition worth many thousands of dollars, will be given as much attention by the press and the people as is the man who owns a couple of horses that would be more at home in a delivery wagon than a sulky. A fair where every county in the State will be encouraged to send county exhibits made up of its best products, having positive assurance that if it wins a prize it will be amply compensated in money and publicity for the expense and trouble incurred. A fair where, if a man displays his poultry, he may feel assured that he can not only win good premiums, but will find modern, cleanly and well ventilated buildings and coops in which to show them. A fair that encourages amateur outdoor sports by furnishing first class grounds upon which each year to hold inter-county contests, such as football, baseball, bicycle and shooting tournaments, and giving liberal prizes to the winners. A fair where the entire exhibition with everything displayed, from a lace handkerchief to a hog, may be seen, day or night, for one admission, upon the State Fair grounds. A fair that will have such a speed track that the California standard bred horse, the finest and fastest in the world, can, under State supervision, upon our own soil, make those world's records that have done more probably to advertise California than any other one thing. A fair where there shall be something doing from morning till midnight that will either interest, amuse or instruct its patrons.

Many believe that such a fair cannot be made a success. In their opinion, the public will not give its patronage to the State fair unless running races are made its principal attraction. With a certain class of people this is undoubtedly true, but with the country people, for whom State fairs throughout the Union are supposed to be conducted and maintained, the running races are not the principal attraction. In my opinion it is a mistaken idea that in order for our State fairs to be successful they must be conducted at the State's expense as a preparatory department of the professional jockey clubs.

As an evidence that the success of a State Fair is not dependent upon the running races, we have the State fairs of the north and east and south that are conducted with but few, if any, running races, where the attendance is greater, sometimes twice over, in a single day than has the attendance been for years past at the California State Fair for the entire two weeks of its meeting. This I say without wishing to detract from the sport offered by the owners and breeders of running horses, but while they have the encouragement offered by the professional jockey clubs in breeding and developing that class of horses, the owner and breeder of the harness horse is dependent almost entirely upon the State, district and county fairs for his encouragement and support, and it is upon the race tracks kept up by such State, district and county fairs that the harness horse must make those records upon which his value and sale depends; therefore, it is no more than proper that the greatest inducement should be offered the owner and breeder of standard bred horses at our State fairs, not only upon the above mentioned account, but because every farmer and every stock raiser is a breeder or owner of the harness horse and is directly interested in the State Fair, so far as it relates to horse racing, only on account of the encouragement it gives the breeding and development of this class of horses.

In order to create a renewed interest in our State fairs the directors of the Agricultural Society are endeavoring to complete a scheme of buildings upon the new State Fair grounds that will furnish modern and suitable accommodations for the proper display of the produce of every exhibitor. It is the intention to have these buildings so located and grouped that they will be easily accessible to the patrons of the fair, and they are to be surrounded with clean covered walks and drives. Between now and the time for holding the next State Fair it is expected that the entire fair grounds will be properly graded and sown to grass, with many trees of different varieties planted upon that portion of the fair grounds outside of the race track. And the directors are now considering the proposition of setting apart a portion of the grounds for a free market place for people who wish to camp upon the fair grounds during the time of the fair, where they may find shelter for their stock and first class camping facilities and be supplied by the society with their hay and grain at cost. Such an arrangement would undoubtedly bring many people from the country to the State Fair, where they could buy,

sell and exchange different farm products and breeds of cattle, sheep, swine or poultry, and also gain from each other new ideas regarding the improvement of their products.

Committees have been appointed to revise the premium list both in the livestock departments and in the departments of agriculture and horticulture. When this work is completed the prospective exhibitors will find that in many cases the premiums have been increased so that there will be additional inducement offered in all departments.

Amusement should be furnished morning, afternoon and evening so that there would be some attraction for the public at all hours of the day and evening. In the morning we hope to have, outside of the usual stock parades, etc., inter-county and inter-state shooting contests by amateur gun clubs, also baseball and football games between teams from different counties, and liberal prizes should be given to the best teams in any of these classes, and cups and medals should be offered by the society, to be contested for each year and to be held by the county having the best team in the State in either one of these lines of sport.

Such contests as these will have a tendency to generate a rivalry between the different counties of the State, not only in matters of sport, but the exhibitions made of products by individuals and by counties themselves which will result in interesting the people and the press throughout the State, which means increased attendance, and increased publicity for the State Fair through the columns of the newspapers. No contest, unless it is a cold-blooded gambling proposition, is ever a genuine success unless there is a feeling of local rivalry between the contestants. The sport itself, as has been proven in baseball, football and other amusements, when shorn of local feeling would not draw enough people to make the gate money cover the advertising expenses. I am endeavoring by this to show that to get exhibitors and the people interested in the State Fair we must stir up a keen but wholesome rivalry between the counties and different sections of the State. By this plan and with increased premiums we will certainly improve the class and increase the number of exhibits, and in proportion to the importance and number of exhibits made, and to the local rivalry created will be the number of people that attend our State fairs, and the people who are encouraged to visit the State fairs in this manner are the very people for whom State fairs are maintained.

If possible, harness races should be arranged between horses owned and bred in the different counties of the State, and rules adopted that will make such contests absolutely non-professional, and in this way encourage the farmer to breed, raise, train and drive the horses entered in these races.

Have the fair grounds brilliantly lighted with electricity at night, and also light at least a quarter of a mile of the track near the grand stand, so that all exhibits may be seen as well at night as by day, and amusements, novelty races and sports of every kind may be conducted in front of the grand stand for the entertainment of the public in the evening.

Trains of decorated and well lighted trolley cars, carrying bands of music, should be provided to carry the public to and from the fair grounds for these evening entertainments.

A State Fair conducted along these lines might not be an immediate financial success, for it will take a year or two, at least, to convince the producers that the State Agricultural Society is now fully determined to carry on these annual exhibitions primarily in their interests. It will also take time to make the public understand that these fairs are given

FOUR—CHRISTMAS BREEDER. 12-11-W each year for the benefit of the whole State and are worthy of their patronage when viewed as either an institution of education or entertainment.

It will take time, too, to convince the press of the State of our earnestness in this matter that we may gain from the newspapers their enthusiastic support. When these things are accomplished there will be no more question about the success of California's State fairs than there is about the State fairs of the east and north.

In the meantime should the Agricultural Society find that by giving a State Fair along these lines they have cut themselves off from a certain amount of revenue that has heretofore been derived from the running races and on that account find themselves after the close of our coming State Fair confronted by a deficit, can it be doubted but that the members of the next Legislature, who are the people's representatives, would gladly make liberal appropriations to cover any such deficit, when they understand that it was caused by a change of policy of the directors of the society in their effort to encourage the breeding and improvement of the standard bred horse, in fostering the interests of the raiser of cattle, sheep, swine and poultry, and the encouragement of the agricultural, horticultural, mineral and manufacturing interests of the State by furnishing better facilities for the exhibition of the products of these industries and increasing the premiums to encourage their display. Such action on the part of the Legislature, under these conditions, would undoubtedly meet with the approval of the people throughout the State, and the Governor. The great State of California is not a "cheap" State. It is willing to pay, and pay well, for anything as long as it receives fair value for the money invested. It has spent hundreds of thousands of dollars in sending exhibits of our State products to those expositions that have been held in other States and other countries, and this money, without a doubt, has been well invested, for it has resulted in the advertising of our State and its products abroad and bringing to California thousands upon thousands of people seeking homes, but not one dollar of the money so spent would be better invested than would be the money used in

improvement over his sire at the stud, and Domino, equipping the State Fair grounds with modern buildings adapted to the display of all kinds of products and a race track as fast as any in the world, and providing sufficient funds to carry on an annual exposition of our own products; for the employment of the best judges to be obtained to pass upon the merits of the contests and exhibits in every department, and to pay purses and premiums that will guarantee the patrons of the fair that they will see the best of everything, in every class, that is produced in California.

It is but a question of a few years until a fair of this kind would be more than self supporting, for it could be made the pride of California and its people and everyone throughout the State would be interested in promoting its success; it would be attended by thousands of people where now we have but hundreds; it would bring to its grounds the finest and fastest horses in the United States; it would be the one objective point of every homeseeker that he might see the products of the different counties and judge for himself of the most favorable place to locate. It would be the meeting place of the members of all those associations that are organized for the promotion of the interests of the agricultural, horticultural and live stock industries.

Such a State Fair, I believe, will meet with the approval and support of the people of California.

DECLINE OF THE DIOMED DYNASTY.

[Continued from Page 24]

by Himyar, would undoubtedly have proven a phenomenal getter of race horses, judging by the two crops he got before passing away. Not a single Glenelg stallion ever proved successful at the stud, though his daughters were marvels in the line of production, and the Planet or Trustee male line is but a memory in America. The Ill-Used male line is not dead, but it is not much in evidence these days. No son of Sir Modred has as yet proven brilliant at the stud, but his daughters are excellent producers.

Of the younger sires, Imp. Meddler, who is near the top of the list in this country again this season, seems to be a much better sire of females than of males, as are also Ben Brush and Kingston. Hastings and Lamplighter, the two splendid sons of Spendthrift who are keeping the male line of Melbourne well toward the front in America, seem to get more good males than females, and of Imp. Ben Strome, who has headed the list and is always well up, it can be said that he begets good ones of both sexes. A peculiar thing about Imp. Meddler is that Imp. St. Gatien, his sire, is of doubtful paternity, being either by Rotherhill or The Rover. Hamburg, the leader this season, seems to sire more high-class fillies than colts, though his son, Burgomaster, is probably the best two-year-old of 1905.

But to return to the Diomed dynasty. If the owners of stallions in the male line of the first winner of the English Derby desire to see the family occupy the position it once did they will have to use considerable money and much judgment. Lexington male line horses of the present like Cruzados, Rey del Sierras and Yo El Rey, full of "broodmare blood" as they are, need to be bred to mares equally as strong in "sire blood," so that the owners of these horses should see to it that they get some mares by Eolus or some of his sons like Knight of Ellerslie or St. Saviour, Imp. Waterress, Star Ruby, Hanover or St. Blaise, backed up by the blood of Spendthrift, Longfellow, Rayon d'Or, King Alfonso, Vandal, Imp. Phaeton or Imp. Australian, using as little Glencoe, Yorkshire, Albion, Medoc or American Eclipse blood as possible so that "sire blood" would preponderate in the foal, at least in the first five generations. If the owners of the Lexington male line stallions did not care for "American blood" let them go to England and buy some mares by Bend Or, Hampton, Kendal, Galopin, Wisdom or near crosses of Doncaster, Blair Athol, Speculum, Lord Clifden and with Stockwell, Newminster, Voltiguer, Orlando, Touchstone, Irish Birdcatcher, Whalebone, Whisker and other "sire blood" in the background. Until one of the above mentioned plans are followed out, the prospects for the Diomed or Lexington male line again occupying a front rank in America is decidedly gloomy. I have seen horses at the stud with from four to six crosses of Lexington backed up by Glencoe, Albion, Medoc, Trustee or other strains where the good females of the families greatly outnumber the good males, yet the owner of the horse fondly imagines his stallion will make a good sire. And when he has been mated with a lot of mares bred on much the same lines as himself, and proves a rank failure, they wonder why it was thus. My idea, based upon history, is that a good sire must come from a tried sire line and be from a mare full of "sire blood," such as is shown in the preceding table. The longer the list of successful sires that can be traced in the male line straight through the better, and if it goes clear to Eclipse, Herod or Matchem without a failure in the line, you can bet upon its being the one to "tie to." If the mate of the above mentioned stallion is equally strong in "female blood"—that is, possesses as many crosses from the second table as the stallion did from the first—the result should be a good balance and a high-class racer—if all the other details of the mating are carried out as carefully.

Will Mr. Baldwin, who knows he has a speed marvel in Cruzados, be the man to revive the glories of the kingdoms of Lexington, Boston, Sir Archy and Diomed by providing suitable mates for the best race horse of the line to-day? Let us hope he will, and that with the rebuilding of the fortunes of the Diomed family will come a rehabilitation of the Santa Anita stud, once the wonder of Americans and the particular pride of Californians.

Jackson's Napa Soda does not tangle the feet.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

FLASHLIGHT PHOTOGRAPHS OF BIG GAME.

An adventurous feat which seems almost impossible of accomplishment, that of photographing wild animals in their lairs and runways by flashlight in the jungles and on the veldts of Africa, has been successfully undertaken by Herr C. G. Schillings of Wetherhoff, Guertzenich, Germany. Not only has Mr. Schillings succeeded in securing actual photographs of the most ferocious game animals which are to be found on the dark continent but he has written a fascinating description of his adventures, which work has been recently published in Germany. So valuable is the book, both as an up-to-date contribution to natural history and as an intensely interesting story for sportsmen, that an American edition, entitled "With Flashlight and Rifle," has just been published by Harper and Bros. In translating the work of Mr. Schillings, Henry Zick, Ph. D., has adhered as closely as possible to the original, preserving the freshness and virility of the author's touch, and the result is one of the most thrilling and sensational books descriptive of aboriginal conditions in Africa that have appeared in recent years.

For the purpose of securing views and photographs of animals, which in a few years approximately will be extinct, the author undertook his journey into the heart of Africa. Not being an artist, nor, as he says, having the facility of the descriptive writer, he decided that the only way accurate reproductions of savage beasts and their habits could be obtained was by means of the flashlight and telephotography. He points out that photographs purporting to be of wild beasts in their native state and habitats have been gross pictorial falsehoods. Commenting on this he refers to a "magazine, which has a large circulation, in which I found the picture of a lion attacking a zebra, that had been taken, as the text implied, by a missionary in Eastern Africa."

Then in the text referred to one missionary is said to have taken other scenes of animal life at closest range—for instance, a lion watching for his prey. The truth is that the missionary had been incorporated into the picture group to make it more acceptable to the people at home. The group of animals was simply made up of stuffed specimens picked up on the veldt. To cap the climax of fraudulent representation, the stuffed zebra used by the ingenious picture fakir belonged to a species which has disappeared from East Africa and can only be found in South Africa.

Mr. Schillings' first expedition into Central Africa was in 1896 and there the initial desire was born within him to permanently fix the powerful and glorious impressions he had received and to pass them on to others. He undertook two other expeditions, but turned back on account of illness and it was only when he started upon his fourth journey, with a complete outfit, that his most sanguine expectations met with anything like satisfactory realization. Mr. Schillings arrived at Tanga, East Africa, early in February, 1903, with a caravan consisting of 170 carriers and Askari (native guards). The first stop

which was receding as the dry season advanced; and, again, the rhinoceros returned nightly from the steppes to the drinking place near the swamps; and antelopes, water bucks, wart hogs and buffaloes drew near to the swampy region."

In this sportsman's paradise the author secured at night many views of zebras and antelope, and also pictures of the rhinoceros, showing various interesting doings of this ponderous and dangerous beast. The writer devotes an entire chapter of his book to the giraffe, of which long necked denizen of the lake region he secured numerous excellent photographs.

A HERD OF ZEBRAS STARTLED BY FLASHLIGHT

This curious animal frequents the arid African plains and is so constituted that it does not need to select its haunts within easy reach of drinking water, as it can get along for days without water—a faculty tradition has credited the camel with possessing, to a degree, and which abstinence it seems is now shared by the African rubber neck. Thus is another belief shorn of its patent to exclusive notoriety.

To secure a picture of an old bull giraffe in company with two bull elephants, Mr. Schillings followed the strangely assorted African "Three Musketeers" for weeks before he found the propitious moment for the sun to break through the clouds so that he could take the much desired picture. He declares his belief that giraffes, which are absolutely mute, must possess some kind of a sign language by the medium of their tails. For in close observation of their ways it struck him, time and again, that the caudal appendages of these creatures were used to wig wag intelligence of varied import to each other. He believes, that in spite of protective laws, giraffes will ere long, become extinct in Africa, and that on this account as many skins as possible should be secured for museums.

"I have often found," he writes, "giraffes killed by lions but I believe as a rule it takes two or more of the felines to stalk and overpower a full grown bull. Yet the 'lion's ride' depicted by Freiligrath, the German poet, is a possible thing. Anderson relates that he once saw a giraffe with a lion on its back."

"The powerful kick of the bull giraffe is apt to keep a lion at a respectful distance. The giraffe is even able to shake off his enemy and run away from him. Near the Greccel volcano I killed a bull with many scars and minus the tuft of his tail. The old bulls, as a rule, are wary and do not frequent the drinking places, the natural hunting ground of the lion, as often as do the young and the females. Where other game is plentiful the lion will leave the giraffe alone. Yet between the lion's tooth and the small calibre rifle of the human hunter the giraffe will not escape destruction."

And here we find tradition gets another setback, for comparatively few of us ever knew or surmised that the ungainly looking giraffe could or would give battle to a lion—the supposed invincible "king of beasts." As a sprinter the giraffe has had a long and enviable reputation. As a fighting quality he evidently is now entitled to respectful recognition.

The lion hunting adventures of the author are such as to put Gordon Cumming and other noted African hunters of wild game a little in the shade. Even President Roosevelt's experiences in Colorado, in contrast, partakes of the conventional. His story of one lion hunt is quoted:

"Never to be forgotten by me are the hours which I spent in 1899 following the track of fourteen lions. I had never before met such a number of lions in one troop. The impressions made by the mighty paws of the animals were clearly defined in the fine dust which covered the dry ground of the steppe, an expressive writing for the well trained eye of the

hunter. There is a strange fascination in following the traces of wild beasts into the fastnesses of the steppe; in the case of my tracking the fourteen lions this eagerness was alloyed with a goodly amount of anxiety. One's imagination loves to picture the possible situations which the pursuit of the beasts may bring about. So did mine on that occasion. Having reached the top of a hill, I saw the lions resting among the rocks in the shade of some locust trees. But, alas!—or should I not rather say fortunately?—the animals withdrew from sight as soon as they had become aware of me. I often had to register similar experiences that the lions were so near and yet too far.

"The worst stroke of ill luck, from a hunter's point of view, I had was when I failed to kill the strongest maned lion I ever met with in the wilderness. One day, while stalking water bucks, I saw an animal hiding in the bushes. Soon I made it out to be a maned lion of unusual size. He had scented me and galloped away before I could take good aim. The bullet I sent after him did not miss him quite, as

I could see from the bloody trail. I followed it for a distance, but without being able to overtake the wounded beast. My men found the carcass of a big lion a fortnight later not far from where I had wounded the lion. He had worked his way into the heart of a thicket so that even the vultures could not get at him. The flesh was almost completely eaten up by maggots. I could only save the skull, the biggest in my collection. The defective teeth showed me the lion was well on in years.

"All in all, I caught thirty-seven lions in traps made by Rudolph Weber. A few strong beasts had dragged the sixty pounds of iron for long distances

RHINOCEROS FEEDING AT NIGHT

of the expedition was on the shores of the Ndjiri Lakes, near the western base of the Kilimanjara range. This district is noted as a rendezvous for animals of all kinds. Mr. Schillings describes it as follows:

"The birds which live near the swamps and rivers now found a fine crop of water plants, filled with seeds, floating on the lakes of the Ndjiri swamps. Immense flocks of geese and ducks squatted on the marshy grounds. Thousands of gnus and zebras pressed up to the shores of the lakes, the water of

AN AFRICAN VULTURE

an hour or more. The asses and cattle which I used as bait had all been stung by the poisonous tsetse fly. The quick bite of the feline simply shortened their otherwise slow and painful death. The trapped and runaway lions had often forced their way so deep into the thickets of reeds and grass and thorny bushes that I had to climb neighboring trees so as to get a shot at them.

"Once I caught in traps a whole family consisting of three lionesses and six almost full grown whelps. The first night three were caught, the second night

four, and the third night two.

"A lion born in the wilderness, but full grown in captivity, can give to the visitor of zoological gardens only a faint idea of what the 'king of the desert' really is in a state of liberty, ruling the free, great, wild steppe.

The leopard has the reputation, and is so pronounced by Mr. Schillings, of being the most dangerous and formidable beast of prey in East Africa, and his book contains several snap shot pictures of leopards in their native state. They are often hunted and slain by lions. Here is where "Spots" takes, from a rather unexpected quarter, a shot at tradition and relegates a bit of popular belief, anent his leopardship, to the disillusion scrap box with Wm. Tell's apple and the like.

"The leopard has no decided preference for any special locality," says Mr. Schillings. "Its haunts may be found anywhere—on rocky ground as well as in wooded districts—in fact, wherever it finds sufficient cover.

"It easily climbs trees, and often hides during a hot day in their shady tops. To my personal knowledge men were jumped on and killed by beasts con-

MALE LEOPARD DRINKING AT A POOL

cealed in the foliage—as in the case of a negro, for instance, who was about to climb a mango tree

"The lightninglike rapidity with which a leopard moves, charging or running away, defies description. Although these animals are found in abundance, they are cunning and sneaky. According to my diary, I encountered and hunted the dangerous cat only twelve times, but the meetings were as exciting as any I had with the wild beasts of the wilderness.

"One of the most blood-stirring adventures I had with a leopard was near Pangani, when I set out on my journey into the interior in 1899. I had gone back to town, accompanied by but one man, in order to engage more carriers. Returning toward evening to my camp, my attention was drawn to a tree on which a crowd of baboons were shrieking with all their might. Since monkeys are preyed on by the leopard, I concluded that the baboons were directing their wrath against one of the stealthy cats in a nearby thicket. I penetrated a few feet into the jungle, when something ahead of me began to move, while the monkeys followed on in the tops of the trees. The thicket grew less dense, and I soon found myself on the edge of a ravine, when I saw, about ninety feet away, a strong leopard dragging a half-grown baboon. I raised my rifle, but before I could fire the beast had dropped the monkey and escaped with a mighty leap into the ravine. I was sorry to be forced to desist from pursuing it, but I had to return to camp

"It is very hard to hit a fleeing leopard; it surely is better for the hunter to miss the beast than merely to wound it. A wounded leopard is a most dangerous enemy when it turns and charges the hunter; its movements, quick as lightning, hardly allow one to take aim. Although I knew this from personal experience, and although I had made up my mind to shoot leopards only under favorable conditions, I always yielded to the temptation whenever I got a chance to shoot.

"On one occasion my foolhardiness brought me within an inch of losing my life. I noticed in the sand of the steppe the tracks of a leopard dragging its prey. They led me to the high bank of a ravine washed out by rain. I went all around it and found the animal had not left it. Soon I made out the leopard lying with its prey, a small antelope, in a hole under the roots of a tree. But the beast had noticed me also. Leaving its prey behind, the leopard tried to steal away; at the same moment I fired. A trail of blood proved that I had hit the animal but had not killed it. Going along the high and steep embankment, I noticed the beast cowering, half hidden by the roots of a tree. The distance between us was about seventy-five feet. What happened now was enacted much more quickly than it takes time to describe it.

"At the same moment that I raised my rifle to fire a telling shot, the leopard leaped toward me quick as a flash of lightning. I saw the beast clawing the edge of a ravine and almost touching my feet, and

felt that there was no escape possible, and no defense either, when the leopard jumped back into the ravine as quickly as it had attacked me. The sight of my two native companions, who put in an appearance near me just at that moment, apparently had scared the animal as much as its sudden appearance had staggered my men. Although I did not lose my presence of mind, I did not have time enough to raise my rifle and to shoot it; it all happened in a few seconds. A few minutes later a well aimed shot freed us of all further danger.

"Never shall I forget this experience. I can even now hear the short snarls of the infuriated beast. I was saved through no skill or bravery of mine, but by mere luck."

The book abounds in graphic descriptions of hunting expeditions for elephants, hippopotami, the rhinoceros and smaller game. Some of the photographs illustrative of the text approach the marvelous. Mr. Schillings' book will prove a valuable contribution to current literature on natural history, hunting adventures and experiences and field photography of animate and inanimate subjects.

MRS. CHAS. REID THORBURN'S CH. MEG MERRILLIES II.

(A. K. C. Stud Book, 82,267.)

The year 1905 has been a particularly memorable one in the annals of dogdom on the Pacific Coast. Among the champions to which we refer with pardonable local pride is the crock Bull Terrier, Meg Merrillies II, owned by Mrs. Charles Reid Thorburn of Berkeley. This grand bitch is of San Francisco production and together with Frank E. Watkin's Ch. Edgewise Peer forms a brace of Bull Terriers which would be hard to equal in any country. After winning her championship points at Stockton, Meg Merrillies was bred to Imp. Bloomsbury Baron, by whom she whelped six white puppies, four dogs, any of which may inherit the show qualities of their celebrated mater.

Meg began her prize winning career as an eleven-months-old puppy at the San Francisco Show, May, 1905, where, under Judge Thos. Ashton of England, she won successively through all her classes, taking winners, defeating Edgewood Jean II, (first open, San Francisco, May, 1905,) a bitch which had won over the famous Ch. Woodcote Wonder. It is the intention of Meg's owner to exhibit her on the Eastern circuit, where her progress will be watched with much interest by Pacific Coast Bull Terrier fanciers.

Following is a partial list of Meg's wins:

San Francisco Kennel Club Show, San Francisco May, 1905—Judge, Thos. Ashton, Leeds, England. First prize—Puppy, novice, limit and winners classes. Specials—Bohm-Bristol trophy for best Bull Terrier in novice class. P. J. Weniger trophy for best Bull Terrier in the show. W. S. Tievis breeders' challenge cup for best puppy bred on the Pacific Coast. Reserve, best dog in the show owned by a lady.

Santa Cruz, Cal., July, 1905—Judge Charles Lyndon, Toronto, Canada. First prize, limit, open and winner classes. Specials—W. H. Denning trophy for best Bull Terrier in the show. W. W. Stettin trophy for best terrier, any variety, in the show. San Mateo Kennel Club medal for best dog in the show owned by a lady. T. J. Torchiana III, trophy for best dog owned and shown by a lady.

Stockton, Cal., September, 1905—Judge, Chas. Lyndon, Toronto, Canada. First prize, limit, open

CH. MEG MERRILLIES II

and winners classes. Specials—Clifford G. Cook trophy for best Bull Terrier bitch in the show. Dr. F. P. Clark trophy for best Bull Terrier in the show. Bohm-Bristol trophy for best terrier, any variety, in the show. Hale & Co. trophy for best dog in show owned by a lady. President F. N. Vail cup for best dog in show.

How Shasta Was Named.

The word Shasta is derived from the Russian language. Many years ago, and among the first travelers to visit this portion of the Pacific Coast, was a party of Russians who passed through California, going from the north to the south. They gave a name to many of the more prominent landmarks which they encountered on their journey. To the peak now called Shasta Butte, a mountain clothed with eternal snow, the highest in California, they gave the name of "Tcheste," signifying chaste, pure, clear. Subsequent travelers and geographers changed the name to "Tchasta," which was again changed after a discovery of gold, to the present word "Shasta." When the counties of the state were first organized Shasta Butte was in Shasta county. Afterwards a new county was formed, Siskiyou, which embraces the lofty mountain within its boundaries.

PASADENA SHOW.

(By George L. Waring.)

The first dog show held at Pasadena under the direction of the Southwestern Kennel Club compares favorably with any other shows on the Coast, with the exception of the San Francisco and Los Angeles shows.

Some of the arrangements could be improved upon on a future occasion. The judging ring could be larger and could also be kept clearer. Mr. Morris and Mr. C. A. Summer got through their duties as judges without much interference, but when it came to Mr. Ewins' turn he seemed to be considerably hampered by people who crowded into the ring. There might also be an official to take down the awards from the judges, and hand them out to interested parties.

The judges were all local gentlemen and they did very well. W. J. Morris opened the ball with Rough St. Bernards. Prince Yan, the only one in the novice dog class, walks well, has a good carriage of tail, a nice, typical head and is well put together. He is somewhat lacking in coat, but this remark applies to all the others except Vanderburg. Prince Yan deservedly went through all the rough dog classes. Vanderburg is coarse and has a bad expression; and Bruce has a curly tail and bad color.

Queen Regent, the winner in rough open bitches, is a nice typical St. Bernard, but was shown in poor

J. M. GOLOBECK'S CH. CATO, JR. 81039

condition. She beat Betsy B. rather in head, otherwise there was not much between them. Sir Violet, which won in smooth dogs, was also in bad condition. He has a really fine head, good bone, good body, but his tail is somewhat curly.

The Great Danes were a bad lot. Isabellita is a Dane all right and has good points. Her rather shallow chest mars her appearance.

Red Irish Setters, with the exception of Shandon Ben, were somewhat coarse; and Pointers, except Bee III, did not amount to much.

Don B. won in Pointer novice, limit, open and winners dogs. He is a fair kind of a dog, possessing a good body but a rather thick head. Bee III is a nice bitch; she might be better in head and eyes. She did not show to advantage.

Shandon Ben carried all before him in Irish setters. He is a very good dog and shows himself. Bess Law is a good mover and a nice bitch.

The features of the Collie classes were the general prevalence of bad open coats, and the timid manner in which they all exhibited themselves, except the ones that were no account. I liked a puppy bitch, Vern the Whirlwind, the best of the lot. Though Vern Tottle has repeatedly won, I don't care for her much. She has an inane expression, nearly always pricks her ears, has an open coat, and is small.

Fox Terriers were numerically good, but, with some exceptions, not very classy. Mr. Chas. A. Sumner judged the classes.

In smooth-coated puppy dogs, Bandersnatch had an easy win. He is very self-possessed for a puppy, shows well, has the best head of any of the Fox Terriers shown, stands well and has a good back. Little fault can be found with him, except that he might grow too much. However, his grandsire, Norfolk Trueman, which carried all before him about five years ago, was a big dog.

The credit of breeding this nice puppy is due to Mr. John Brown of Riverside.

Snorky, the second dog, is a nice fellow with a good coat and a fine, deep chest. His head is thick and he does not carry his ears.

The best average breed in the show was Bull Terriers. Only seven specimens were benched and of these five were real good ones. Willamette Edgewise Leander has a long enough name and is a nice dog all round except his tail, which is too elevated. Tedcote Wonder and Woodlawn Baron had a hard tussle. The former won. They are both particularly good in all points, but I preferred the Baron, because he is more classy and has a better crop. I consider this a particularly fine dog, with a short back, splendid tail, good ribs, a fine carriage, and a nice head. All in all, the two are exceptionally fine dogs, and will be heard from again and again. It is a pity that Deacon does not carry his ears better, as in all other respects he is a good all-round dog. Willamette Newmarket Lulu is a particularly fine bitch puppy. Her tail at present looks a trifle thick, but this can easily be remedied on the next occasion. These together formed a fine quintette.

The class for smooth novice dogs was a very bad one, and it was a choice of evils. Sabine Engineer, by Sabine Result, is a very well put together dog, with fine bone and coat, but his thick head puts him entirely out of court. He might have won, and also the third dog—Checkers—might have.

In limit smooths Sabine Rustic beat Tallac Marksman. They are both very good dogs of a good size. The former carries his ears rather wide, and the latter carries his rather high. The latter struck me as if he would look better with more flesh on him. Both of them are good bodied and both show well. Rustic might be more masculine in expression of countenance, and Tallac Marksman would be better if he was not so gay with his tail. The competition was keen between them. In open dogs Sabine Rustic also beat Wandee Blizzard, which looked light.

In puppy smooth bitches Mr. Brown won with Garston Puck, litter sister to Bandersnatch. She is much smaller than her brother, and is somewhat light at present.

In wires Argyle, Tallac Oanna and Tallac Private were all nice ones.

After many appearances, British Rally at last earned brackets in a special for wire-haired, owned in Pasadena. He won away off by himself, as he was the only starter in the class.

Bill Sykes, a good all-round, honest dog, was to the fore in the dog classes for Bulldogs, and Girtford Goody was unapproachable in the bitch classes. She is good all over. By a mistake she was shown

CH. COUNT GLADSTONE IV

against Bill Sykes and beat him.

Princess of Trebizond was the limit winner in the bitch class. She was the only one entered. She was as game and "sassy" as ever.

The Boston classes were probably the best and have caused endless controversy—there were a lot of fine specimens on exhibition. Mr. James Ewins judged the classes. Wednesday evening and after the dust of battle cleared away there was, undoubtedly, some heart burnings.

There might have been mistakes made, but unfortunately, everybody cannot win.

There was a good deal of criticism about the Boston awards. I feel sorry for a Boston judge, anyway. These dogs seem to be of several different types—all winning ones—and it is generally known that they do not come "true to name," as the nursery men say.

It is said that Criterion—the dog that won all his sex classes—is deaf. He is a real good dog, carries himself well, has a good head and deserved what he got.

Miss Pronto also went through her classes with flying colors and also beat the dog, in the competition for the cup presented by Colonel J. W. Brooks for the best Boston in the show.

Colonel Brooks has several good dogs and they will win in the future. There is one especially that was entirely overlooked. They were in bad shape, having lately been on a long journey from the East.

Bayside Chauncey was present, but not for competition. Fanciers in this part of the world should have examined this dog, as he is pretty near a model specimen; and if he is right, a great many prize winners at this show are wrong. A very distinctive characteristic of the right kind of this breed is a flat skull and a short, square muzzle, free from wrinkles. There are too many apple heads in this neck of the woods. Another important point is a clean neck, free from bulliness. Without a good neck it is impossible to have a good outlook, which is of great importance in a show ring.

The show was a pronounced success, especially in a financial way.

The club held a meeting Wednesday night and announced that a show will be held at the Chutes, Los Angeles, some time in March of next year.

A press committee was appointed consisting of the following gentlemen: Mr. F. J. Gillespie, Mr. Paul Piepers, Mr. Ed. Greenfield.

Bill Sykes won the cup presented by Benjamin Blossom for the best Bulldog dog in the show, Sabine Rustic won the cup presented by William K. Peasley for the best Fox Terrier in the show, and Miss Pronto won the cup presented by Col. J. W. Brooks for the best Boston Terrier.

The superintendent, Richard Thomas, performed his numerous duties admirably, the dogs were well looked after, and the dog men were loud in their praises of R. C. Halsted, the secretary, and the committee as being most obliging and courteous.

Altogether, it was a very pleasant little show, save, it may be suggested, in many classes—sadly too many there was no competition at all, many dogs and bitches winning three firsts straight, with no contenders. It would be advisable not to have so many classes in a show of this description.

Awards.

St. Bernards (rough coated)—Novice dogs—1 Prince Yan, Mrs. E. Deniel. Limit dogs—1 Prince Yan; 2 Vanderburg, A. K. Macomber. Open bitches—1 Queen Regent, Felchenfeld Bros.

St. Bernards (smooth coats)—Open dogs and bitches—1 Sir Violet Felchenfeld Bros.

Great Danes—Limit dogs—1 Rover, Josephine Sheaff; 2 Duke, Miss Herma Dupe. Open dogs and bitches—1 Isabella, J. L. Cunningham; 2 Rover; 3 Duke.

Pointers—Novice dogs—1 Don B. A. P. Blackler; 2 Sammy. W. H. Hepler. Limit dogs—1 Don B.; 2 Sammy. Open and winners dogs—1 Don B. Novice bitches—1 Daniels' Flip, T. E. Daniels. Novice bitches—1 Daniels' Flip. Novice, limit, open and winners bitches—1 Bee III, S. C. Gum.

Irish Setters—Novice dogs—1 Finglass, P. Hutchinson; 2 Don, G. T. J. Gollmer; 3 Don, G. W. Collis. Limit dogs—1 Finglass; 2 Don, G. W. Collis. Open dogs—1 Shandon Ben, P. Peipers; 2 Finglass; 3 Don, G. W. Collis. Winners dogs—1 Shandon Ben. Puppy bitches—1 Queen V., J. H. Varley. Novice bitches—1 Bess Law, P. Peipers; 2 Babe, G. W. Collis. Limit bitches—1 Babe. Open bitches—1 Babe. Winners bitches—1 Bess Law, P. Peipers.

Collies—Puppy dogs—1 Vern the Judge, G. R. Albers; 2 Vern the Kid, G. R. Albers. Novice dogs—1 Vern Tommy, G. R. Albers. Limit dogs—1 Vern Tommy. Open dogs—1 Vern Tommy. Puppy bitches—1 Vern the Whirlwind, G. R. Albers. Novice bitches—1 Vern the Whirlwind; 2 Lady Bobbie IV, Mrs. D. P. Flory. Limit bitches—1 Lady Bobbie IV; 2 Gladys May, W. Ellery. Open bitches—1 Vern Tottie, G. R. Albers.

Open dogs, California bred—1 Vern Tommy. Open bitches—1 Vern Tottie; 2 Vern the Whirlwind. Any color—Puppy novice and open bitches—1 Vern White Lady, G. R. Albers.

Bulldogs—Novice dogs and bitches—1 Rex Rustic, Sam Schenk; 2 King Third, C. E. McLean. Limit dogs—1 Bill Sykes, P. Blossom. Open dogs—1 Bill Sykes. Novice bitches—1 Venice, Mrs. W. R. Murphy; 2 G. S. Halliwell; 3 Lady Grey, Sam Schenk. Limit bitches—1 Girtford Goody, A. M. Eaton; 2 Lady Grey. Open bitches—1 Girtford Goody; 2 Lady Grey.

Bull Terriers—Puppy dogs—1 Willamette Elgecotte Leander, T. E. Daniels. Novice dogs—1 Woodlawn Baron, Mrs. C. R. Thorburn; 2 Deacon, J. R. White; 3 Willamette Elgecotte Leander. Limit dogs—1 Tedcote Wonder, W. H. Spinks; 2 Woodlawn Baron; 3 Deacon. Open dogs—1 Tedcote Wonder; 2 Woodlawn Baron; 3 Deacon. Puppy bitches—1 Willamette Newmarket Lulu, T. E. Daniels. Novice bitches—1 Willamette Newmarket Lulu; 2 Princess of Trebizonde, Mrs. A. M. Thomas. Limit bitches—1 Princess of Trebizonde.

Boston Terriers—Puppy dogs—1 Endcliffe Quaker, J. W. Brooks; 2 Breaker, Charles D. Callery. Novice dogs—1 Criterion, H. T. Kendall; 2 Oak Glenn Togo, S. Tyler; 3 Acme Rocky, J. W. Brooks. Limit dogs—1 Criterion; 2 Rogue III, Martin A. Chase; 3 Endcliffe Director, J. W. Brooks. Open dogs—1 Criterion; 2 Rogue III; 3 Endcliffe Director. Puppy bitches—1 Peaches, E. T. Morgan; 2 Endcliffe, Dorothy, J. W. Brooks; 3 Wave, S. Tyler. Novice bitches—1 Chimpanzee, L. R. Walton; 2 Pepita, G. F. Herr; 3 Peaches. Limit bitches—1 Miss Pronto, G. F. Herr; 2 Bayside, Reserve, G. S. Halliwell; 3 Chimpanzee. Open bitches—1 Miss Pronto; 2 Bayside, Reserve; 3 Chimpanzee.

Fox Terriers (smooth-coated)—Puppy dogs—1 Bandersnatch, G. L. Waring; 2 Snorky, R. C. Halsted; 3 Vandal, Miss Herma Rupe. Novice dogs—1 Count Warren, E. I. Moody; 2 Sabine Engineer, Wm. K. Peasley; 3 Checkers, R. C. Halsted. Limit dogs—1 Sabine Rustic, W. K. Peasley; 2 Tallac Marksman, Walter W. Stettheimer; 3 Count Warren. Open dogs—1 Sabine Rustic; 2 Wandee Blizzard, Fred Rodgers; 3 Tallac Marksman. Puppy bitches—1 Garston Puck, J. P. Brown; 2 Snooks, R. C. Halsted. Novice bitches—1 Poppy, R. C. Halsted; 2 Garston Puck. Limit bitches—1 Poppy; 2 Snooks, R. C. Halsted. Open bitches—1 Vina Belle, W. W. Moore; 2 Poppy.

Fix Terriers (wire-haired)—Puppy dogs—1 Argyle, J. Bradshaw. Limit dogs and bitches—1 Tallac Oanna, Walter W. Stettheimer; 2 British Rally, Mrs. A. M. Thomas. Open dogs and bitches—1 Tallac Private, W. W. Stettheimer; 2 British Rally.

Dachshunds—Open dogs and bitches—1 Fritz, Miss Ethel Hager; 2 Berlin, Mrs. John Peter.

Irish Terriers—Limit dogs—1 Borthwick Star, John Peter; 2 Prince, B. Blossom. Open dogs—1 Borthwick Star; 2 Prince. Novice bitches—1 Belfort Pilgrim, G.bons-Sherwin; 2 Belfast Hot Spuds, J. Peter. Limit bitches—1 Belfast Rose, J. Peter. Open bitches—1 Belfast Rose.

Black and Tan Terriers—Open dogs and bitches—1 Sport, A. C. Tubbs.

Scotch Terriers—Open dogs—1 Scotty, J. S. Cravens. Open bitches—1 Tighnabruach Nell, J. S. Cravens.

Pomeranians—Open dogs and bitches—W. J. Firehall, W. J. West.

Yorkshire Terriers (Weight limit 12 pound's)—Open dogs and bitches—1 Bill, M. B. Kennedy.

Maltese Terriers—Open dogs and bitches—1 Manila Erma Johnson.

Japanese Spaniels—Novice, limit and open dogs and bitches—1 Nippon, Sarah K. Shoemaker.

Chihuahuas—Open dogs and bitches—1 Dona Mexicano, T. J. Scanlan.

The Wild Duck.

"You were out gunning yesterday, I hear," remarked Fred Johnson. "See any wild ducks?"

"One," replied Bert Wyman.

"But you didn't get within range, I suppose."

"I was within range of his voice all right while he swore at me for shooting his tame ones."

—O—

Jackson's Napa Soda does not tangle the feet.

FIELD TRIAL WINNERS OF 1905.

Pacific Coast Field Trial Club.—Twenty-second annual trials, Bakersfield, Cal., January 9. H. L. Betten, Alameda, Cal., judge. Albert Betz, San Francisco, secretary.

Derby.—Purse, \$510, 3 moneys, 50, 30 and 20 per cent and trophy to each winner. Entrance \$5, second forfeit \$5, and \$10 to start; 39 nominations, 23 paid second forfeit; 17 starters (8 Pointers, 9 English Setters). Winners—1 Ladylike, orange and white English Setter bitch (Orion-Terry's Lady), Jos. E. Terry, Sacramento, Cal., owner; W. B. Coutts, Kenwood, Cal., handler; 2 Mariposa, white and tan English Setter dog (Detroit Joe-Countess Mark), W. W. Van Arsdale, San Francisco, Cal., owner; C. H. Babcock, Del Rey, Cal., handler; equal 3 Del Rey Belle (California Bell Boy-Countess Mark), Lee Rose (Los Angeles) and S. Christenson (San Francisco) owners; Chas. Bishop, handler; 2 Flintstone, white, black and tan English Setter dog (Robert Count Blackstone-Topsy K.), American-Llewellyn Kennels, owners; W. W. Updike, handler; 3 Hard Cash, white and liver Pointer dog (Young Jingo-Brown's Bella Pointer), A. M. Masters, owner; E. Shelley, handler; 4 Tip Fauster, white and liver Pointer bitch (Jingo's Pearl-Nellie Fauster), D. F. Greer, owner; E. Garr, handler.

Champion Stake—November 17. Purse, \$205 to winner. Entrance \$10, \$15 to start, 10 nominations, 7 starters (6 English Setters, 1 Pointer). Winner—Jessie Rodfield's Count Gladstone, white and orange English Setter dog (Lady's Count Gladstone-Jessie Rodfield), J. Sherwood, owner; E. Shelley, handler.

Maryland and District of Columbia Field Trial Club.—Easton, Md., November 16. H. Lee Clarke, Baltimore, and Chas. B. Cooke, Richmond, judges; W. R. Armstrong, secretary.

Members' Derby—Entrance \$2, \$3 to start, 6 starters (4 Setters, 2 Pointers). Winners—1 Kinley Mack, liver and white pointer dog (Jing of Rush-Bess of Kent), J. Dunn, owner and handler; 2 Wilful West, black, white and tan Setter bitch (Nicholson's Mack-Bird West), J. L. McCormick, owner and handler; 3 Bessie R, liver and white Setter bitch (Max Walker-Nellie Bly), W. D. Randall, Jr., owner and handler; 4 George Wilson, black and white Setter dog (Ben —), J. Brown, owner; Dr. Travers, handler.

Members' All-Age—Entrance \$2, \$3 to start, 13 starters (4 Setters, 1 Irish Setter, 8 Pointers). Winners—1 Kinley Mack, first in the Derby; 2 Brace G., liver and white Pointer dog (Tramp of Muirkirk-Lady Regina), G. H. Gent, owner and handler; 3 Sue Gladstone, black, white and tan Setter bitch (Mack V-Flora Temple), J. Dunn, owner and handler; 4 Wier's Jingo, liver and white Pointer dog (Pat's Jingo-Queen), G. P. Wier, owner and handler.

Indiana Field Trial Club.—Fourth annual trials, Clay City, Ind., November 23. A. Ruffe and E. D. Garr, Members' Stake judges; A. Ruffe and C. F. Young, Derby and All-Age judges; C. F. Young, Clay City, secretary.

Members' Stake—For unplaced dogs, purse, 4 moneys, 40, 30, 20 and 10 per cent. Entrance \$2, \$3 to start, 9 nominations, 6 starters (5 English Setters, 1 Pointer); handling not confined to owners. Winners—1 Drill's Dot, white and black Pointer bitch (Drillmaster-Queen), C. F. Young, owner and handler; 2 Rodgay, white, black and tan English Setter dog (Rodfield-Miss Gay), G. Kraemer, owner and handler; 3 Princess May, white, black and tan English Setter bitch (Prince Danstone-Tuckahoe Girl), J. Becker, owner; E. Donaldson, handler; 4 Edgehill Lit, black, white and tan English Setter bitch (— - Edgehill Countess), R. S. Barrett, owner; F. C. Lockhart, handler.

Derby—Purse, 3 moneys, 50, 30 and 20 per cent. Entrance \$5, \$10 to start, 10 per cent of fees deducted for running expenses. Nineteen nominations, 7 starters (5 English Setters, 2 Pointers). Winners—1 Jessie's Melrose, orange and white English Setter dog (Lady's Count Gladstone-Jessie Rodfield), H. A. Kirby, owner; Chas. Askins, handler; 2 Princess May (third in Members' Stake); 3 High Urd, black, white and tan English Setter dog (Phoebe's Rod-Little Casino), L. Hilsendegen, owner; E. D. Garr, handler.

All-Age—Purse, fees less 10 per cent, 3 moneys, 50, 30 and 20 per cent. Entrance \$5, \$10 to start, 17 nominations, 7 starters (4 English Setters, 3 Pointers). Winners—1 Daniel Webster, black, white and tan English Setter dog (Sport Webster-Blue Belle), J. C. Graham, owner and handler; 2 Tip Fauster, liver and white Pointer bitch (Jingo's Pearl-Nellie Fauster), C. F. Greer, owner; E. D. Garr, handler; 3 Lady Blue-stone, black, white and tan English Setter bitch (Count Rodstone-Daisy Gladstone), J. L. Donaldson, agent and handler.

International Field Trial Club.—Seventeenth annual trials, Ruthven, Ont., November 20. Marsh Byers and Geo. Merritt, Chatham, Ont., judges; J. G. Armstrong, Detroit, honorary secretary-treasurer.

Members' Stake—6 starters (3 English Setters, 1 Irish Setter). Winners—Not declared. The judges, Geo. Merritt and Antoine Pellon, each favored a dog for first place and were unable to agree on the award.

Derby—10 starters (8 English Setters, 2 Pointers). Winners—1 Harper, black, white and tan English Setter dog (Prince Rodney-Countess Beatrice), J. Ruddicombe, owner; C. Allen, handler; 2 Atalanta, white, black and tan English Setter bitch (Prime Minister-Louise Danstone), Dr. W. J. Campeau, owner; A. Pilon, handler; 3 Lady Gay Rodfield, black, white and tan English Setter bitch (Farland Ben-Baby Earl), G. Dale, owner and handler; 4 Landseer, black, white and tan English Setter dog (Count Danstone-Tony's Lady), Dr. Campeau, owner; A. Pilon, handler.

All-Age—8 starters (5 English Setters, 3 Pointers). Winners—1 Selkirk Solus, white, black and tan English Setter dog (Selkirk Whyte-Selkirk Tana), W. B. White, owner; J. Huddleston, handler; 2 Peque, black

and white English Setter dog (Snowball-Belle), T. A. Duff, owner; J. Huddleston, handler; Equal 3 Joe Hawk, black and white Pointer dog (Prince-Fly Ann), A. J. Pickering, owner and handler; Equal 3 Phyllis, black, white and tan English Setter bitch (Sam T. II-Maud S.), J. Douglas, owner; A. J. Pickering, handler.

Virginia Field Trial Association.—Fourth annual trials, Martinsville, Nov. 28. A. C. Peterson, Homestead, Pa., judged each stake. E. P. Wilkins, Riverton, Va., assisted in the All-Age and Free-for-All. W. B. Meares, Linwood, N. C., assisted in the Derby and Free-for-All and Geo. C. Herring in the Derby. Chas. B. Cooke, Richmond, secretary.

Members' All-Age—Purse, entrance fees, 4 moneys, 40, 30, 20 and 10 per cent. Entrance \$2, \$3 to start, 18 starters (14 English Setters, 4 Pointers). Ying (Chinese), owner and handler; 2 General Kellar, lemon and white English Setter dog (Sport's Boy-Gladstone's Girl), C. B. Cooke, owner and handler; 3 Polly Bucklew, orange and white English Setter bitch (Ruby's Don-Sally Bucklew), Dr. L. Buckner, owner; E. B. Cooke, handler; 4 Lady Tip Top, black and white Pointer bitch (Woolton Sam-Sam's Venus), W. N. Lipscomb, owner and handler.

Derby—Purse, entrance fees, 4 moneys, 40, 30, 20 and 10 per cent. Entrance \$2, \$3 to start, 15 starters (11 English Setters, 4 Pointers). Winners—1 Lady Tip Top (fourth in Members' All-Age); 2 Young Bob's Tony, black, white and tan English Setter dog (Bob's Tony-Brownie), E. P. Wilkins, owner and handler; 3 Count's Scout, orange and white English Setter dog (Lady's Count Gladstone-Peg Marie), Dr. L. Buckner, owner; J. S. Persinger, handler; 4 Spot's Jingo, orange and white Pointer dog (Four Spot-Maud Light), H. H. McCormick, owner.

Free-for-All—Purse \$300, 4 moneys, \$150, \$75, \$50 and \$25. Entrance \$5, \$10 to start, 23 nominations, 20 starters (13 English Setters, 7 Pointers). Winners—1 Chesterfield Sue, black, white and tan English Setter bitch (Rancocas Jack-Tignor's Vic), J. C. Tignor, owner; W. D. Gilchrist, handler; 2 Courier Journal, orange and white English Setter dog (May Fly-Baby Rodfield), M. O. Smith, owner; D. C. White, handler; 3 Rip's Lass, black and white ticked Pointer bitch

CLINTON E. WORDEN'S PEARL'S JINGLE

(Young Rip Rap-Jingo's Lass), W. F. Garth, owner; 4 Don E., black, white and tan English Setter dog (His Highness —), J. G. Chandler, agent and handler.

Continental Field Trial Club.—Waynesboro, Ga., December 4. Robt. Huntington, Long Island, N. Y., and Dr. M. F. Rogers, New Albany, Miss., judges. John White, Hempstead, L. I., secretary.

Derby—Purse \$500, 3 moneys, 50, 30 and 20 per cent, 20 starters (15 English Setters, 5 Pointers). Winners—1 Navajo, black, white and tan English Setter bitch (Uncle Sam-Pretti Sing), D. E. Rose, agent and handler; 2 Vashti, white, black and tan English Setter bitch (Jessie Rodfield's Count Gladstone-Lady Josephine), F. M. de Graffenreid, owner; J. Bishop, handler; 3 Tonopah, white, black and tan English Setter dog (Tony Boy-Sport's Estelle), W. C. Hunter, owner; J. Bishop, handler.

All-Age—Purse \$500, 3 moneys, 50, 30 and 20 per cent, 16 starters (11 English Setters, 5 Pointers). Winners—1 Lemon's Rodfield, black, white and tan English Setter dog (Rodfield-Fleetaway), J. Lemon, owner; J. Bishop, handler; 2 Hard Cash, liver and white Pointer dog (Young Jingo-Brown's Bella Pointer), A. M. Masters, owner; E. Shelley, handler; 3 Jessie Rodfield's Count Gladstone, black, white and tan English Setter bitch (Lady's Count Gladstone-Jessie Rodfield), John W. Considine (Seattle), owner; Elliott, handler.

Pointer Club of America.—Barber, N. C., December 7. G. Muss-Arnolt and Major J. M. Taylor, judges; C. F. Lewis, secretary.

Members' Stake—Purse, entrance fees, 3 moneys, 50, 30 and 20 per cent, 7 starters. Winners—1 Top Notch Launcelot, liver and white dog (Royal Kent Hessen-Fandango), W. J. Gordon, owner and handler; 2 Armstrong's Don, liver and white dog (Devonshire Don-Telegram), R. K. Armstrong, owner and handler; 3 Jubilee Blithe, liver and white bitch (Rector-Dinah), Dr. J. S. Howe, owner; W. Steele, handler.

Derby—Purse, entrance fees, 3 moneys, 50, 30 and 20 per cent, 8 starters. Winners—1 Alford's King, black and white dog (Alford's John-Belle Rip Rap), W. B. Lyon, owner; W. S. Munger, handler; 2 Furlough Duffer, liver and white dog (Furlough Tip-Barbec's Bess), Furlough Kennels, owner; F. L. Bevan, handler; Equal 3 Furlough Duster—same breeding and owner as F. Duffer; J. Armstrong, handler; Equal 3 Melksham Boy, liver and white dog (Melksham Bragg-Dayton Lady), Furlough Kennels, owner; J. Armstrong, handler.

All-Age—Purse, entrance fees, 3 moneys, 50, 30 and

20 per cent, 11 starters. Winners—1 Alford's King (first in the Derby); 2 Top Notch Launcelot (first in Members' Stake); Equal 3 Gibson Girl II, black and white bitch (Young Rip Rap-Kittie Gibson), Pinehurst Kennels, owners; W. D. Morgan, handler; Equal 3 Melksham Boy (equal 3 in Derby).

Eastern Field Trial Club.—Waynesboro, Ga., December 12.

Alabama Field Trial Club.—Huntsville, Ala., December 18.

The names of the winners in the foregoing two field trials were not received in time for publication in this issue.

The Dog Poisoner Is Here.

We often note in some of our interior exchanges articles, with the above caption, in which the apparently wholesale poisoning of dogs is commented on and the unknown perpetrators of the outrage come in for a scoring.

Information recently received from a stock raiser in Colusa county may shed some light on what has been regarded, in probably many of these cases, as the work of "unknown miscreants."

The poison layers were, under the circumstances, unknown, but the motives for putting out poison were somewhat different than surmised—although results were exasperating to many dog owners.

Ranchers, in this state, are much subject to the depredations of coyotes, wild cats, raccoons and other animals. Poison is used to kill off these marauders, particularly so for stoppage of the coyotes' raids on sheep and young live stock. The coyote is about as cunning a pest as one can well imagine, and is an adept in dodging all sorts of schemes concocted for his undoing.

Many ranchers in putting out poison for the hated coyotes do so after this plan: About a selected place in a pasture, or near the hog pen or sheep corral, savory pork "cracklings" are scattered over the ground. This is a tempting morsel for a coyote or dog. A few pieces of cracklings, the size of a hazel nut, contain strychnine. A small slit is cut into the hard fat, the poison inserted and the fat pressed over the poison, making in fact a most deadly capsule. The coyotes fall to this little game effectively.

The dogs come in for trouble in due course, for dogs in country towns have a habit of roaming off for miles into the country. Many of these dogs have a bad habit of killing sheep also. Incidentally the rancher is somewhat indifferent to the fate of strange dogs around his place, for generally their presence bodes nothing but mischief. Furthermore, the report of shotgun or rifle and the finding of a dead dog is sometimes productive of more or less ill feeling and controversy between neighbors or others concerned. One dog will bring more dogs with him. Instances are known where one or two dogs have killed sheep and have returned to the scene on the following day or night with a number of other dogs, the whole pack intent on further depredation.

In prowling about the ranches the dogs pick up the cracklings, the poison pieces are bolted and the small, hard ball of deadly fat lays in the dog's stomach until dissolved in process of digestion. Before digestion takes place there is ample time for the luckless dogs to journey miles back to town and to their homes. When the poison acts and the dog or dogs die at home, the presumption is that the "dog poisoner" is at his nefarious work and great is the row kicked up.

In view of this custom of putting out poison on ranches it would be advisable for careless owners to keep their dogs from roaming in the country districts. Most ranchers post poison notices when they lay out coyote dope. This precaution is all right when one's dog is out with him, but when the dogs are roaming about unchecked in the country they are up against an unhealthy proposition.

Sad and Pathetic.

It must be anything but pleasant reading to owners of kennels of the breed in England to find that, so near as Paris, poodles, served up in various ways, have been made to take the place of mutton at some cheap restaurants. A gang of dog-stealers has evidently been busy in the capital of France purloining poodles for the purpose of slaughtering and dressing their flesh for food. These people, from information received by the police, appear to have made a profitable business out of the game. Ladies have been the chief sufferers, the authorities having received a large number of complaints on account of their dogs having been stolen, with the result that the gang has been captured, and some of the dog-stealers are being prosecuted. No reason appears to have been given why poodles should be more tasty than any other ladies' pet dog.—Exchange.

What would be the effect, for instance, should one who had dined on poodle call on the owner of the lost dog? Would "his master's voice" be potent enough for the dog's vocal response or its appearance?

Dogs in Quail Hunting.

The dog is the best, the real quail hunter. Without him one may tramp far and score little. It is a beautiful spectacle to watch when perfectly trained dogs are "working" in field or jungle. It almost reconciles the tender hearted to killing birds. The dogs look so reproachful if one fails to take instant advantage of their set or point. "What are you here for?" the eyes say as plainly as possible. No shooting and bad marksmanship alike demoralize a trained dog, who makes his scorn reach your inmost soul. At the same time it must be said that an untrained dog is more to be despised than a bad marksman. The latter may improve, but the former never.

On a hot day drink Jackson's Napa Soda lemonades and be refreshed.

DUCK HUNTING CLUBS.

The numerous gun clubs whose shooting preserves are located on the vast salt marsh stretches of the bay counties districts are more or less familiar to our readers by reason of frequent notices for many seasons past.

The opportunities for indulging in the sport are by no means confined to this vicinity, and in every district of the state, where there is a possibility for either quail or duck shooting, gun clubs have been organized and preserves secured. The present situation is the prelude for a condition that will eventually make it exceedingly difficult for the independent shooter to follow the bent of his inclination for field or marsh shooting. For local shooters, there will always be the waters of the bay at their disposal, luckily.

The Sacramento and Yolo basin tule districts are famous duck shooting territory; much of the available ground has already been secured. What the conditions are up the river is here shown in a description of two gun clubs' holdings:

Of the various organizations formed for pursuit of ducks, though not exclusively devoted to that object, perhaps the most prominent in the vicinity of Sacramento is the Glide Gun Club, organized in August, 1903, by twelve residents of Sacramento, merchants and professional men. For two seasons the fortunate hunters enrolled in its ranks have returned laden with an abundance of game and a fund of hunting stories amply sufficient to last until the next annual migration of the birds from the north.

The Glide Club has leased about 11,000 acres of land in the Yolo basin, known as the sink of Putah creek. Its eastern boundary being about four miles from the Sacramento river and the preserve stretching toward the foothills on the west. The main club house is located about eight miles from Sacramento, and is reached in a drive of forty minutes. The other is about three miles distant, and is located on the opposite side of a great tule marsh that affords the best sport. Recently limit bags were made on this section in 55 minutes' shooting. Each structure has a bunkhouse, dining room and kitchen, and is capable of furnishing accommodation for about thirty hunters. They are cosy cottages, and there is a barn adjacent to each, where teams may be stabled.

Members visit the place in summer as well as winter, for the reason that splendid black bass fishing is to be had in the lakes and ponds, and the clubmen organize blue rock picnics when the fishing ends.

There has been upward of \$3000 spent in visible improvements during the past two years, and this expense has been borne by the members, in addition to the cost of maintenance and the rent for the grounds. The club is supported by annual assessments, and the books will show that the hunters pay a stiff price for their winter recreation. It is said that some of them could pay \$5 in the market for every duck they secure through their membership and still make money, but this is true only of those who have time or inclination to go duck shooting. It is safe to say that each member of the Glide Club spends upward of \$150 per year for his sport, and that none of them consider it an excessive charge.

The limit of membership in this club is now forty-five, and there are four vacancies, which will be filled this winter. Edward P. Hilborn is the president and Frank Hickman the secretary and treasurer. The executive committee consists of these two and E. D. Adams, J. P. Snook and H. E. Yardley.

The present membership includes Fred Adams, J. F. Armstrong, J. M. Blair, C. E. Carson, C. C. Cotter, E. C. Deuel, W. F. Geary, E. E. Griffin, S. S. Hall, J. W. Hughes, J. R. Hughes, A. M. Just, C. J. Matthews, H. McWilliams, George Macken, Frank Newbert, W. E. Newbert, W. B. Peterson, W. A. Robertson, Frank Ruhstaller, A. L. Shinn, E. J. Weldon, W. H. Williamson, E. A. Nicholas, E. D. Adams, J. P. Snook, Frank Hickman, E. P. Hilborn, H. E. Yardley, C. C. Perkins, I. H. McMullen, R. R. Flint, Alden Anderson, A. W. Towle, L. G. Siller, W. H. Wright, George W. Peltier, A. T. Foster, W. E. Loydal and H. L. Pierson.

Back of Clarksburg, down the river from Sacramento, is the Big Lake country, consisting of about 6000 acres and extending south. The tule potato, the favorite food of the mallards, abounds throughout this district, and the mallards settle there by the thousands. It is hunted by land owners and farmers of the vicinity, many of whom ship to the markets.

Adjoining this territory, east and west of Duck slough, is the preserve of the Mallard Club, consisting of 12,000 acres, extending almost to Rio Vista. Mallard ducks are found in greatest quantities below Clarksburg, owing to the quantity of food most acceptable to this variety.

In some respects the Mallard Club is one of the model organizations of America. A. W. Stewart, a wealthy rancher of Grand Island, is president and manager, as well as the lessee of the grounds. The membership is made up of a few business and professional men of Rio Vista and Courtland, and all are in hearty accord with the rules of the club, which are as stringent as any imposed upon the hunters of any club in the country.

Members are allowed to use fifty shells a day and no more. There is no shooting permitted before sunrise or after sunset, in spite of the half-hour clause in the state law. No ducks are sold under any circumstances.

One of the features of the Mallard Club is the character of its decoys. Mr. Stewart has a flock of sixty trained geese, comprising seven varieties, to act in this capacity. Some of them have worked on the ponds of the Mallard Club for ten years, and at the sound of the owner's voice will remain within a corral of string about twelve feet square.

A man unfamiliar with the duck-club progress in the South will be surprised to learn that where three years ago lay farming land below Westminster, there

is now not less than nine different preserves, running all the way up to 420 acres each, containing as many as twenty-five members apiece, either established or in process of establishment, representing an average value in excess of \$100 an acre. These preserves have all been made within the last three seasons, and, strange to say each and every one of them has had first class sport from the beginning.

The number of new clubs that are in the field this season is surprising, and nearly all seem to be enjoying good sport.

In some favored sections, clubs have been started at a week's notice, land bought, and limit bags made within a month after the papers passed. California may be slow in some things, but certainly not in developing her sporting resources.

Five years ago there were two clubs operating south of the Alamos—this is to say, clubs of any consequence. They were the Bolsa Chica and the Newport.

The Lomita Land and Water Company, Westminster Land and Water Company, Golden West Gun Club, Christopher Land and Water Company, Blue Wing Gun Club, Chico Land and Water Company, were killing limits several weeks ago, and in thirty days there will in all probability be thrown open to the investing public other propositions of the same sort.

These clubs own their land, and incorporated as land and water companies to develop water and be protected therein. Flowing artesian wells flood the ponds in a few weeks and keep the water sweet, this being the secret undoubtedly of the great success thus far enjoyed by the Chico clubs. The freshest ponds always attract the ducks.

The last piece of duck marsh in Chico was purchased last week for gun club purposes, and within the next two years it is predicted that there will be a continuous chain of ponds from the Bolsa Chica to Alamos Bay, forming a great artificial feeding ground and thoroughfare for the waterfowl in which they can rest securely five days out of the seven.

A careful compilation of all the Southern Califor-

PACIFIC COAST AGENCY, SAN FRANCISCO

nia duck clubs puts the number at fifty, which easily places this part of the country far ahead of the East in preserves.

A list of the principal gun clubs of Southern California is the following:

Ballona district—Recreation, Del Rey, Centinela El Patron, Santa Monica.

Cerritos district—Cerritos, Green Wing, Green Head, Pasadena and two small clubs composed mostly of Compton shooters.

Alamitos district—Alamitos Sheriff's, Gadwal, Los Angeles, and small clubs which shoot on the tide lands of Alamitos Bay and kill a few ducks.

Bolsa district—Bolsa Chica, Lomita, Golden West, Westminster, Blue Wing, Canvasback Christopher, Green Wing Land and Water Company, Chico, and several unnamed propositions.

Newport and Fairview districts—Newport Pacific, Green Head, San Joaquin and two new clubs whose names have not been announced as yet.

Many of these clubs own their own land and are able to make such improvements as they desire without worrying over being turned off at the expiration of their leases.

The Del Rey and Recreation clubs in the Ballona district, each expended about \$10,000 on their houses alone. The Bolsa Chica is the most luxuriously appointed of any; the wealthy members have reduced their muscular exertion to a minimum, and each has a Jap to set out his decoys, carry his shells and pick up his dead birds, the house appointments being equal to those of a first-class hotel.

Of clubs that own their own land and do not go in

for more than the necessary comforts of the game, the average expense is about \$1500, and there are usually about fifteen shooters, though some have as high as forty members, and a few as low as four.

It is estimated by persons fairly well qualified to pass judgment, that in Southern California's fifty odd duck clubs is tied up a sum of money considerably in excess of a million dollars, and steadily increasing in value. It is a notable fact that although many of the clubs have paid what seemed a big price for their properties, not a single instance has been reported where they could not sell out now at a profit.

The interest in duck shooting has grown to such an extent that many wealthy Easterners who spend the winters here have taken memberships in local duck clubs, getting in three or four months of the sport each winter and enjoying the same advantages as their brother gunners who live on the scene the year round.

THE WINCHESTER REPEATING ARMS CO.

Of the many industries and manufacturing establishments in New Haven there is none which employs so large a quota of the population as the Winchester Repeating Arms Company. Carrying on a business and a manufacture, international in its extent, and which has made the name of New Haven known all over the world, in a quiet, yet consistent manner, it has gone on year after year, increasing in capacity, output and fame.

This great plant, covering as it does, in all, some two hundred and thirty-five acres of land, is unquestionably the largest manufacturing establishment of small arms and ammunition in the world. The main plant takes up about thirty acres, with at present over twenty acres of floor space. The necessity for continued additions makes probable a revision of these figures in the near future. Besides this area mentioned, the water shops on Whitney avenue (the site of the old Whitney Arms Works), together with the proving and storage grounds, go to make up the acreage first given.

The present company was organized in 1866. The personnel was made up of Hon. O. F. Winchester, E. A. Mitchell, John English, J. A. Bishop and Morris Tyler. After the close of the Civil War, in 1866, Hon. O. F. Winchester, then Lieutenant Governor of Connecticut, bought up the Henry rifle patents, improved them in many ways, and organized the company for the manufacture of this arm. The new rifle was named the "Winchester," out of compliment to the distinguished founder of the company. "Winchester" has since become a household word the world over. Almost immediately the new company was overwhelmed with orders for their famous rifle. Many of these orders came from pioneers in the far West who were then seeking new homes and desired such a rifle for protection from foes and to kill game for their subsistence—a dual and world-wide reputation the weapon has maintained in a superlative degree to the present day. In 1869 the company acquired the American Rifle Company. The purchase included the Spencer Rifle Company and the Fogarty Rifle Company of Boston. The Adirondack Arms Company of Plattsburg, N. Y., was purchased in 1874.

The present officers of the company are: President, Thos. G. Bennett; vice president and treasurer, G. E. Hodson; assistant treasurer, H. S. Leonard; secretary, A. L. Ward.

The various products and inventions of the Winchester Repeating Arms Company have been a material factor in revolutionizing the manufacture of firearms and ammunition throughout the civilized world. While the Henry was the first repeating rifle made, it used rim fire cartridges and had also the additional disadvantage of having to displace the magazine in order to fill it. This was remedied in the Winchester by the introduction of a fixed magazine. In 1873 center fire cartridges were used. No repeating rifle ever made—or repeating shot gun, for that matter—has had the remarkable success of the Winchester product, and in fact, it may be said without exaggeration that the same statement could be applied to the whole of the Winchester output, whether repeating rifles or single shot rifles, repeating shot-guns or ammunition—for rifles or pistols, metallic cartridges or shot gun shells. There is no country on the face of the globe where these goods are not known, and it is a further fact that at the present time over two million of Winchester guns are in use. Only the best materials go into the guns, and each arm is thoroughly tested and tried, by methods peculiar to the Winchester company—the result of study, application and experience for fifty years. The same care and supervision is carried out in regard to ammunition and shells. No product of the company is allowed to leave the works until thoroughly proven up to the high standard that has made the reputation of Winchester goods second to none.

The various products of the Winchester Repeating Arms Company are described in numerous catalogues and booklets that may be procured by mail from the company at New Haven, Conn., or by addressing the Pacific Coast Agency, 127-135 First street, San Francisco.

An enumeration of Winchester products would take far more space than is available at the present time. Reference is here made, however, to the .32 and .35 model 1905, self loading rifle, a hammerless take-down, a descriptive circular of which is worth sending for. So is "The Trap Shooters' Guide," in view of the fact that the "Leader" and other Winchester shells are used by premier amateur and professional trap shots of the Coast—and throughout the United States and Canada as well.

The Pacific Coast agency of the Winchester Repeating Arms Co., an illustration of which appears in another column, is located at Nos 125-137 First

street, this city. The handsome building has a floor space of 50x150 feet, is six stories high, an emporium, large as it is, that is hardly adequate for the increasing volume of business handled by the Coast branch. The agency was established in this city about twenty-five years ago.

Mr. Adolph Muller, the Coast manager, has been in charge of affairs nearly ten years and is favorably known to the fire arms and ammunition trade of the world, having made extended business trips to Europe, Australia, China, throughout the United States and Canada, and the Pacific Coast territory in particular.

Mr. W. H. Seaver, the travelling representative of the Coast branch, is personally well known and esteemed by a majority of Coast sportsmen, as also is George H. Lammers, who is located in the northern territory, and Harry A. Hoyt. Mr. Chris Myer has been connected with the Coast branch for many years and is a rifle expert who has made the Winchester rifle a feared and respected factor at rifle contests for the past two decades.

Christmas Greeting.

The attention of our readers is respectfully requested to the announcements of the E. I. DuPont Powder Company and the Ladin and Rand Powder Company on the inside of the back cover page.

Good wishes and a cordial holiday greeting are tendered to the sportsmen of the Pacific Coast and of the world, instead of the usual business advertisement—a recognition of the many friends the powder makers and their representatives have among those who go afield with gun and dog and also find recreation at the traps.

Prominent on Sportsmen's Row.

Clabrough, Golcher & Co., 538 Market street, San Francisco, has the enviable reputation of being the largest retail sporting goods establishment on the Pacific Coast.

Anything in every branch of outdoor and indoor sports may be procured there by devotee of rod, gun and dog, the outing enthusiast or summer camper, the athlete or automobilist.

Among the many high class specialties of this firm may be mentioned the Clabrough gun, the best selected stock of fishing rods and tackle to be found in the United States, and a line of cutlery and sundries that is unsurpassed.

Their hand loaded shells supplied to trap shooting experts and lovers of upland and marsh shooting have a reputation second to none.

The firm also carries on a wholesale business and has a large mail trade. The catalogue published by Clabrough, Golcher & Co. is complete in every essential and will be forwarded to any address upon application.

A Standard of Quality.

Nearly 13,000 cases of Selby Factory Loaded Shells was the output for last October orders. This was the forerunner of a steady and growing demand upon the resources of the big ammunition plant of the Selby Smelting and Lead Company. The October supply this year was 33 1/2% in excess of orders for October, 1904. The demand for Selby Factory Loaded Shells has been increasing annually—quality is the test, and sportsmen have found the loads to be what they want. Since the October output of nearly 13,000 cases, the output has been up to the full capacity of the plant. There are 500 Selby Factory Loaded Shells in each case; that means almost six and a half millions of shells for Coast sportsmen to start the hunting season with. These shells must have filled the bill, for the shooters have, like Oliver Twist, asked for more—the first taste merely whetted the appetite. Selby Loads are reliable.

Highest Honors to the Parker Gun.

Parker Bros., Meriden, Conn., have received from the Lewis & Clark Centennial management a diploma for gold medal awarded for their Hammerless Gun. The award was made to Parker Bros. by the highest jury of awards known as the Superior Jury composed of five of the representative men of Portland. Thus the highest compliment was paid the Parker Gun by the Centennial Exposition.

The Parker Gun is famous for simplicity of action, beauty of outline and finish, and exceptional shooting and wearing qualities.

In a recent announcement Parker Bros. suggest to sportsmen the advisability of sending to their address, 30 Cherry street, Meriden, Conn., for one of their descriptive catalogues—the splendidly illustrated booklet gives complete information regarding the reliable qualities of the Parker Gun and some practical hints, as well, that are of interest to all lovers of the up-to-date shotgun.

Home Products in Demand.

C. P. W. Brands of Factory Loaded Shells—loaded with standard makes of smokeless powder is the ammunition used by a large number of quail and duck hunters. This fact is a criterion of worth and quality. The loading is guaranteed and orders may be placed with dealers for any kind of powder the sportsman favors. "Pattern," "Perfection" and "Invincible" shells loaded by the California Powder Works are unsurpassed for trap and game shooting.

An Old and Valued Friend.

Do you remember your first rabbit, your scare when you flushed the first quail and the time you emptied the old shotgun at ducks 200 yards away?

U. M. C. ammunition was preferred in those old days just as it is now. Boys used to ask for "U 22s." They do so now. Gulde and sportsmen still take and use U. M. C. big game cartridges up North. They find them best.

There are many guns of many makes but U. M. C. cartridges excel in all guns whether Remington, Winchester, Marlin, Savage, Stevens or any other.

In the Bridgeport factory is a sample gun of every style and caliber, and to these U. M. C. cartridges are fitted and in them are tested. This accounts for the accuracy, uniformity and reliability of U. M. C. cartridges.

Every standard revolver has its U. M. C. cartridge. The U. M. C. armory is thoroughly equipped with revolvers of every style and calibre, and to them U. M. C. cartridges are exactly fitted, and in them are constantly tested. No matter what make of revolver you use, U. M. C. cartridges will give superior results. The U. M. C. Co. guarantees its revolver cartridges loaded with black and smokeless powder, as stated on labels. U. M. C. quality makes this guarantee possible.

A Widely Known Favorite.

Remington guns are made of selected material, after an exhaustive test in the factory testing department, which selected parts have been proven best adapted, each to its particular purpose. All of the Remington firearms are carefully tested with a standard proof test and all parts are subjected to a close detail inspection while in process.

After shooting for accuracy, the arm is then required to pass a final inspection, which is very rigid and practically obviates the possibility of any goods leaving the Remington works not up to the standard. Remington shotguns are bored for nitro powder, which can be used with perfect safety when properly and not excessively loaded by hand, or when the U. M. C. or other standard factory loaded ammunition is used.

The Remington Arms Co. works at Ilion, N. Y., cover eighteen acres of ground, and consist of sixty buildings, the floor space amounting to nearly 400,000 square feet, and over three hours are required to

"YES, ALL MALLARDS—OH! ABOVE RIO VISTA."

merely walk through and casually inspect the various rooms and departments. The company employs about 1,000 hands, mostly skilled mechanics.

The company has recently placed the improved Browning automatic repeating shotgun on the market, a description of which, or of any of the Remington goods, will be found at length in the various publications of the company, which may be procured by written request to the Remington Arms Co., Ilion, N. Y., or to the Pacific Coast Agency, 86-88 First street, San Francisco, Cal.

A Grand Record.

Ballistite powder has been growing more and more in favor with sportsmen of the Pacific Coast within the last year than the most sanguine expectations of the wholesale and retail trade had anticipated. For field, marsh or trap shooting it has been found, by those who have used it, to be a powder once used, used permanently. In the varied climatic conditions prevailing on the Coast the regularity and sameness of the high grade qualities of Ballistite has made it a strong favorite with many sportsmen.

This was conclusively proven recently, for the supply did not equal the sudden increased demand and the Coast agents, Baker & Hamilton, were for the time being unable to fill the orders coming in from all points. An effort to bring out a carload from the East, was ineffectual for the reason that Eastern orders had so increased that there was a correspondingly heavy draught on the supply.

Orders are a test of quality—hence the statement, "If you use it once, you will use it again," is borne out by facts.

Both the amateur high and general averages at the second annual tournament of the Pacific Coast Trap Shooters' tournament, Ingleside, May, 1905, the Phil B. Bekeart perpetual challenge cup, the Anaconda cup at the Northwest Tournament, Portland, 1905, the Preliminary Handicap trophy and the Pacific Coast Handicap trophy, Interstate Shoot, Ingleside, September, 1905—were all won with Ballistite.

Variety for Sportsmen.

It has been stated that there are 50,000 sportsmen in the State of California. If this is true, there must be also a correspondingly large number of shotgun users elsewhere in the Coast territory.

This being so the merits of the Ithaca gun must be known and liked by many, for early this fall a large Coast invoice had been disposed of. Mr. Phil B. Bekeart, the Coast agent, wired us: "We are cleaned out of every 12 and 16 gauge Ithaca gun. Can't you rush us some. Everybody fighting for them."

The resources of our factory have been pushed to the utmost. Seventeen grades of guns is surely variety enough to suit the wants and tastes of any sportsman. Write for our Art Catalog and special prices. Ithaca Gun Company, Ithaca, N. Y.

Averages Reported.

Parkersburg, W. Va., November 28th. Fred Gilbert, first general average, 169 out of 180, shooting "DuPont"; H. H. Stevens, second general average, 163 out of 180, shooting "DuPont."

Morgantown, W. Va., November 29th. Fred Gilbert, first general average, 166 out of 180, shooting "DuPont"; H. H. Stevens, second general average, 161 out of 180, shooting "DuPont"; J. R. Miller, of Morgantown, W. Va., first amateur and third general average, 160 out of 180, shooting "DuPont"; J. M. Coburn of Morgantown, W. Va., second amateur average, 138 out of 180, shooting "Infallible"; E. F. Jacobs of Morgantown, W. Va., third amateur average, 137 out of 180, shooting "Infallible."

Marseiller, Ill., Nov. 28th and 29th, Lee Barkley of Chicago, Ill., first amateur and first general average, 318 out of 350, shooting "DuPont"; F. C. Riehl, second general average, 315 out of 350 shooting "New E. C. (Improved)"; H. W. Kahler of Davenport, Ia., second amateur and third general average, 313 out of 350, shooting "DuPont"; A. H. Goring of Walcott, Ia., tied for third amateur average, 307 out of 350, shooting "Infallible."

Peters Points.

The local sales for Peters Shells amounted to 1,250,000 in October. The Olympic Arms Co. supplied the major portion of them to sportsmen residing in San Francisco and its vicinity. The Pacific Hardware and Steel Company, San Francisco, are the Coast distributing agents for Peters Shells and Cartridges.

During the trap shooting season this year Peters Shells were in high favor with shooters, who now use them for quail and duck hunting.

At Kent, Ohio, October 12th, Mr. J. A. Smith of Massillon, Ohio, won high average, and Mr. J. L. Schlitz of New Berlin, Ohio, tied Mr. F. I. Bean of Ravenna for second average. All of these gentlemen used Peters Factory Loaded Shells.

At Pen Argyl, Pa., October 2d and 3d, the high professional average was won by Mr. Neaf Apgar, and high amateur average by Mr. E. F. Markley, both using Peters Ideal Factory Loads.

Just Remember.

As much care should be used in securing the dimensions of a gun as in measuring for a suit of clothes. A poor fit in a gun is sure to result in dissatisfaction and a low score; hence in order to avoid the annoyance in consequence upon such results, a few suggestions are offered, which if strictly observed, will be a great help toward securing a fit that is just right, and therefore higher scores or more birds in the field.

To find the correct stock dimensions, the proper drop, kind of gun barrels, shooting qualities, choke, etc., send to the Hunter Arms Co., Fulton, N. Y., for their latest catalogue. The booklet is a compilation of information that no user of a modern breech loader can afford to be without. The illustrations appeal strongly to the intelligent sportsmen. The Hunter one-trigger gun is fully described—this gun is warranted not to "balk" or "double"; in fact, is a perfect single trigger gun. All L. C. Smith guns are guaranteed to shoot any nitro powder made and not get loose.

In the Shopping Center.

For almost thirty years the business conducted formerly by Mr. W. J. Shreve and now known as the Shreve-Barber Company, has been located in this city. Over a quarter of a century in trade with the general public and thousands of Coast sportsmen has given the two stores of the Shreve-Barber Company, 739 Market street and 521 Kearny street, a reputation that has built up a large growing business in the sporting goods line.

Since the beginning of the present year the services of Mr. H. E. Skinner, late of the E. T. Allen Co., and more recently Mr. O. W. (Parson) Jackson, have been secured and in consequence the fishing tackle department has been perfected to a high class standard.

Guns, ammunition, pistols, all kinds of sportsmen's clothing and equipments, besides a miscellaneous assortment of every variety of sporting goods are always in stock and up to date in every respect.

An Important Coast Agency.

One of the largest and most important Coast branch agencies for the leading manufacturers in the United States of shotguns, pistols, air rifles, athletic and field sports' sundries, smokeless powders and sportsmen's articles is the Phil B. Bekeart Company of this city.

Mr. Phil B. Bekeart, the president of the corporation, is not only popular with "the trade" but is a clubman and sportsman of wide and influential acquaintance. He is also a welcome visitor "on the road," with the leading mercantile establishments of the Coast.

RECENT DISCOVERIES IN HEREDITY AND THEIR BEARINGS ON ANIMAL BREEDING.

By W. E. Castle, Harvard University, Cambridge, Mass.

Every breeder is familiar with the great complexity of hereditary processes. He knows that characters of the most varied sort are inherited. These relate not only to general size and proportions, but also to the structure of individual parts, and not merely to structural but to functional peculiarities as well. Thus, in certain races or strains of animals, we find inherited great fecundity, or early maturity or ability to put on fat, or to produce abundant milk; in other cases, speed, keen scent, fierce or gentle disposition, and numberless other characteristics are plainly inherited. Very rarely are any two heritable traits necessarily associated. The cow with a good flow of milk may or may not be gentle; the keen-scented dog may or may not be speedy. Accordingly, we must conclude that different hereditary characters are inherited independently of each other, and are probably represented by different structural elements in the sexual element or germin. We know, further, that the laws of transmission of different characters are different, so that we cannot estimate the force of heredity in the lump, but must fix our attention on one character at a time if we wish to analyze the complex processes in operation.

Francis Galton (1889) was the first to recognize that in the case of certain characters the result of inheritance is a blend of the conditions found in the two parents, while in other characters inheritance is alternative between the condition found in the parents.

A good illustration of blending inheritance is found among rabbits which differ in size of ear. Lop-eared rabbits have ears two or three times as long and as wide as those of ordinary rabbits. A cross between lop-eared rabbits and ordinary ones produces offspring with ears of intermediate size, which sometimes stand erect and sometimes lop. The characters which were so distinct in the parents have in this case lost their identity in the offspring, and apparently cannot be recovered again in their original condition, for the offspring transmit to their young blood the blended character, rather than the extreme conditions found in their respective parents.

It has been thought until quite recently that hereditary processes in general were of this sort and that any result other than a blend was exceptional. But recent investigations do not bear out this idea.

Alternative inheritance is illustrated in a cross between the so-called Belgian hare and an albino rabbit. The Belgian hare is simply a gray-coated variety of the European rabbit, while albino rabbits are pink-eyed and have white hair; the Belgian is pigmented like the wild European rabbit, the albino is essentially unpigmented. A cross between the two produces offspring, all of which have the pigmented or Belgian coat, none being albinos. The effect is similar to that produced when two pieces of glass, one transparent, the other opaque, are held together. We see only the opaque one. Nevertheless, the two have not blended; each retains its own distinctness, and the two can be separated again at will.

So it is in the Belgian produced by cross-breeding with an albino. The albino character is there, though unseen, and will appear as a distinct entity when the cross-bred reproduces, for it will be represented in approximately half of the sex cells formed by the cross-bred animal, the alternative or Belgian character being represented in the other half. It is as if the two pieces of glass, combined originally to illustrate the formation of a cross-bred animal, were separated again to illustrate the formation of the reproductive elements by the cross-bred. For every element formed having the opaque characters, there will be another having the transparent character, but there will be no elements of an intermediate nature.

This simple principle, that in alternative inheritance sex cells of two sorts are formed by cross-bred individuals, constitutes one of the most important discoveries ever made in the study of heredity. The discovery was made about forty years ago by an Austrian monk, Gregor Mendel, who was engaged in the study of cross-bred garden peas.

It however, attracted little attention at the time and was soon forgotten.

Meanwhile, a great body of workers was studying with great minuteness the material basis of heredity, the sexual elements. Their investigations disclosed in the cell a complete basis for just this kind of alternative inheritance and led up to the re-discovery of Mendel's law simultaneously by several different experimental breeders, foremost among whom was the Dutch botanist, de Vries.

Mendel found that in cross breeding between alternative characters, one uniformly dominates in the offspring from its very nature, while the other disappears. Just as, when the two pieces of glass are held up together we see only the opaque one, the transparent one being invisible. Mendel called the character seen in the offspring dominant, the unseen one he called recessive. In rabbits, the gray pigmented or Belgian hare coat is dominant over the albino, the latter being recessive (unseen), in cross-bred animals. Similarly, in mice, guinea-pigs, and even in man, mating of an albino with a pure, pigmented individual produces only pigmented offspring. In guinea-pigs the rosetted or rough coat is dominant over smooth (normal coat); and short coat is dominant over long (or angora) coat. In rabbits, also the normal or short coat dominates over the angora coat, and the same is probably true in cats and goats as well. Among guinea-pigs there occurs a series of alternative pigment types which show Mendelian relations one to another.

If we write them in this order, (1) agouti (i. e., black ticked with yellow, the ancestral or wild type of coat);

(2) Black; (3) Yellow; (4) Albino, we may say that each is dominant over all which follow it, and recessive in relation to all which precede it. Thus agouti mated with black, yellow or albino gives only agouti offspring; black mated with yellow or albino gives either black or agouti, but never yellow or albino, while yellow dominates only over albino. In man, a condition of hypophalangia (two-jointed instead of three-jointed digits) is dominant over the normal condition. In mice, the peculiar waltzing habit of so-called Japanese mice is a recessive character in heredity. In man, a peculiar dark-colored condition of the urine, known as alkaptonuria, is inherited as a Mendelian recessive character. Many other illustrations might be given, but these will, perhaps, suffice to show that Mendelian or alternative inheritance is neither a rare nor an exceptional phenomenon and that it applies to the inheritance not only of characters purely structural but also to those which are physiological as well.

From the facts that cross-bred animals form sexual elements (or gametes) of two sorts, and that the two sorts are equally numerous, it follows that among their offspring dominant and recessive individuals will occur in definite proportions, as explained by previous speakers.

I have already stated that many characters are independent of each other in heredity; I hope now to demonstrate the correctness of this statement in cases of alternative inheritance, even when the independent characters relate to the same bodily parts. For this purpose the coat characters of guinea-pigs and rabbits are well adapted, since they are exterior structures easily studied in the living animal. I hope to show you (1) that pigmentation of the hair is inherited quite independently of its length; and (2) that hair arrangement (in smooth or rough coat) is inherited quite independently of both pigmentation and length of hair. For example, when an ordinary short-haired guinea-pig is mated with a long-haired guinea-pig, all the young produced are short-haired and pigmented, these being the dominant characters. Now, if the cross-bred young are bred together, offspring of four different sorts are produced. Two of four sorts are identical with the grandparents in character, they are short-haired pigmented animals and long-haired albinos respectively. But the other two sorts represent new combinations of characters; they are short-haired albinos and long-haired pigmented animals. Further, these four sorts of individuals occur on the average in definite numerical proportions, viz:

- 9 short-haired pigmented animals;
- 3 short-haired albino animals;
- 3 long-haired pigmented animals; and
- 1 long-haired albino.

Considering pigmentation and hair length separately, we see (1) that there are 12 pigmented animals to 4 albinos, or 3 to 1, as expected; and (2) that there are 12 short-haired to 4 long-haired animals—again 3 dominants to 1 recessive. But if we consider the relation of each pair of characters to the other, we find absolutely no correlation between them. Albinism may or may not be associated in the grandparents. As a matter of fact, when the animals are tested one by one, to determine the presence of recessive characters, we find that albinism, visibly present in 4 out of 16 offspring, is present recessive in 4 others, and that in half of these cases it is associated with short hair, while in the other half it is associated with long coat.

In another experiment which I have performed with guinea-pigs, a cross was made involving three pairs of alternative coat characters, length, pigmentation, and roughness of coat. A long-haired rough albino was mated with short-haired, smooth, pigmented animals. The young were all short-haired, smooth, and pigmented. The coat characters seen in these offspring are the three dominant characters, two of which were received from one parent, one from the other; the three alternative recessive characters are present but unseen.

When the young were bred together, they produced offspring of eight different sorts, including all possible combinations of the three pairs of alternative characters.

One large class was like the parents; short-haired, rough, and pigmented. Two other classes were like the grandparents; short-haired, smooth, pigmented, and long-haired, rough albino. In addition, there were five other new classes not represented among the parents or grandparents. These were:

- Short-haired, rough albino;
- Short-haired, smooth albino;
- Long-haired, smooth albino;
- Long-haired, smooth pigmented, and
- Long-haired, rough pigmented.

The eight classes of young produced in this experiment are not all equally numerous. The largest class is that which contains the three dominant characters; the smallest that which contains the three recessive characters. Theoretically, they should number 27 individuals and one individual respectively, in a total of 64 young. The experiment is still unfinished, but it is already evident that these proportions will be roughly approximated.

This experiment illustrates two important principles in heredity: First, if, as regards the hair alone, there exists such a variety of characters separately heritable, how great must be the number of such characters in the body as a whole, and how remote any individual ancestor, provided that in a considerable number of heritable characters a choice is offered between alternative conditions. Secondly, it shows how a variety of new organic forms may quickly be produced by cross breeding, leading to the combination in one race of characters previously found separately in different races. Thus, in guinea-pigs, one can obtain within two generations any desired combination of the three pairs of alternative coat characters, if he produces a sufficiently large number of

Individuals; but to obtain the desired combination in individuals which will breed true, is not so simple a matter. If the desired combination contains one or more dominant characters, then each animal selected must be tested for the presence of undesirable recessives before one can be sure that the new race will breed true. In practice it will probably be found best by the breeder not to work with too many characters at a time, but to eliminate the undesirable recessives one by one. Otherwise the search for the one individual in a large number which will breed true may prove a long and tedious process. If we deal with one character at a time, the chances are that 1 in 4 of the second generation of animals reared will meet our ideal; if we deal with two characters at a time, the chances are 1 in 16, while if we deal with three characters at a time the chances are only 1 in 64, and so on, with the chances of success diminishing in a geometrical series.

From what has thus far been said, it would appear that in alternative inheritance, characters behave as units, and, more than that, as wholly independent units, so that to forecast the outcome of matings is merely a matter of mathematics. Fortunately, or unfortunately, this is not the whole truth. It is true that in alternative inheritance characters do behave as units independently of each other, but the union of dominant with recessive in a cross-bred animal is not so simple a process as putting together two pieces of glass, nor is their segregation at the formation of gametes so complete in many cases as the separation of two glass plates. The union of maternal and paternal substance in the germ cells of the cross-bred animal is evidently a fairly intimate one, and the segregation which they undergo when the sexual elements are formed is more like cutting apart two kinds of differently colored wax fused in adjacent layers of a common lump. Work carefully as we will, traces of one layer are almost certain to be included in the other, so that while the two strata retain their identity each is slightly modified by their previous union in a common lump.

Thus, when we cross short-haired with long-haired guinea-pigs, we get among the second generation offspring a certain number of long-haired animals with hair less long than that of the long-haired grandparent, or with long hair on part of the body only. Further, certain of the short-haired animals have hair a little longer and a little softer than that of the short-haired grandparent. Again, rough-coated guinea-pigs produced by cross breeds often have coats less fully rough than that of their rough ancestor, lacking certain of the typical rosettes. Finally, when an albino is crossed with a fully pigmented animal, the result may be, not a wholly pigmented animal, but one spotted with white. While such a cross-bred animal forms a full quota (one-half) of albino gametes, the pigment bearing gametes formed by it frequently bear this spotted or modified pigmented condition.

Cross breeding, accordingly, is a two-edged sword which must be handled carefully. It can be used by the breeder to combine in one race characters found separately in different races, but care must be exercised if it is desired to keep those characters unmodified. If modification of characters is desired at the same time as new combinations, then cross breeding becomes doubly advantageous for it is a means of inducing variability in characters, as for example, in the intensity of pigmentation and in the length of hair, quite apart from the formation of new groupings of characters. Sometimes it causes a complex character to break up into simpler units, as the agouti coat of the wild guinea-pig into segregated black and yellow, or total pigmentation into a definite series of pigmented spots. In other cases it operates by bringing into activity characters which have previously been latent in one or other of the parental forms.

Now, what hearing, we may ask, have these theoretical matters on the practical work of the breeder? They show (1) that a race of animals is for practical purposes a group of characters separately heritable; and (2) that the breeder who desires in any way to modify a character found in this group, or to add a new character to the group should first consider carefully how the character in question is inherited.

If the character is alternative in heredity to some other character, cross breeding between the two, followed by selection for pure individuals, will within two generations give the desired combination of characters in individuals which will breed true. This process of selection is simplest when the characters to be combined are recessive in nature, but individual breeding tests become necessary when dominant characters are included in the combination desired.

If a character gives blending inheritance, it must be treated in a different way. Suppose, for example, that we desire to combine lop-ears in rabbits with albinism. How shall we proceed? First, mate a pigmented lop with an ordinary short-eared albino. The offspring will be pigmented half lops. If two of these be bred together, their young will all be half lops, but about one in four of them will be albinos. Now these albino half lops may be mated with pure pigmented lops. The young will again be pigmented, but this time will be three-quarter lops, and by breeding these together, albino three-quarter lops may be obtained in the next generation. By continuing this process of back crossing with the lop-eared stock, and selecting the albino offspring obtained, the lop-eared character may be steadily improved in the albinos until it is practically as good as in the original lop-eared stock. The rate of improvement possible can be readily calculated. The albino young will be

- After 2 generations, $\frac{1}{2}$ lops;
- After 4 generations, $\frac{3}{4}$ lops;
- After 6 generations, $\frac{7}{8}$ lops;
- After 8 generations, 15-16 lops;
- After 10 generations, 31-32 lops, etc.

This will be the result on the hypothesis that no

secondary variation occurs in the lop-eared character. If, however, variation is induced by the cross breeding, then it is possible that the desired end may be reached sooner, or that an even better lop may be obtained in the albino cross breeds, than that of the original pigmented stock.

Latent characters are an important element in practical breeding. Sometimes they greatly aid the breeders' work; sometimes they impede it. If a stock contains undesirable latent characters which are brought into activity by cross breeding, these latent characters will have to be eliminated, or a new stock tried.

Since cross breeding is likely to modify characters even when these conform to the laws of alternative inheritance, and is certain to modify them when they give blended inheritance, it should be practised with extreme caution, and only by the breeder who has a definite end in view and a fairly clear idea of how he is going to attain it.

The purity of standard breeds should be carefully guarded, and much attention should be given to pedigrees, for even when individual excellence is not apparent, it may be present in recessive or else in a latent state, which suitable matings will bring into full realization, provided the ancestors were superior animals.

At the same time the breeder should be on the lookout for individual peculiarities of merit. And he should not be discouraged if these are not transmitted to the immediate offspring. A simple character which disappears from the children, but reappears among the grandchildren, can at once be made a racial character, for it is recessive in heredity.

Inbreeding is not invariably an evil. It is often necessary to cause the reappearance of a vanished recessive character, and is indispensable in the formation of races which will breed true. Two or three generations of close inbreeding usually suffice to realize the practical benefits of the process, if intelligently carried on. The inbreeding should then be discontinued as soon as the desired end has been attained. Otherwise, loss of vigor or infertility may result.

HEREDITY.

(By Luther Burbank, Santa Rosa, Cal.)

The word heredity has a familiar sound to us now, though less than fourteen years ago it could not have been found in Webster's Unabridged Dictionary. It conveys a meaning which no other single word can express and refers to the laws by which living things repeat their characteristics in their descendants.

A knowledge of the laws of heredity, or more accurately, the interaction of the hereditary forces and environmental conditions, without doubt gives man more power in guiding and molding the creative forces of Nature than any other knowledge has yet, or can ever give, and as one looks back further and still further towards the beginning of things and the laws, or more properly, forces which have led up to the present order of Nature, and which perhaps exceed all others in complexity, he can get a broader view in which beautiful harmonies appear where before discord and apparent contradictions seemed to reign supreme.

But at first sight one is almost paralyzed in making any attempt to harmonize the various views which have been held on the subject during the last half century, and it is heart-rending to think of the energies wasted on theories which had no foundation in fact, some of which Nature herself would have refuted at once if approached by actual experiments with the life forces, and, though wrong deductions may be made from actual experiments, yet by these alone can the facts be finally verified and a clearer general knowledge obtained.

Heredity may be said to be the sum of all the effects of all the environments of all past generations on the responsive ever-moving life forces, or, in other words, a record kept by the vital principle of the struggle onward and upward from simpler forms, not vague in any respect but indelibly fixed by repetition. What the vital principles are we do not yet fully know, but we do know that, when simple cells become joined together, mutual protection is secured and that they exhibit organized forces in new directions which were impossible by anyone of the individual cells not associated in a cell colony with its fellows. These cell colonies will, if environment is favorable, increase in strength while colonies less favorably situated may be crippled or destroyed. We see this natural selection in all life every day around us. But this is only one of the many forces at work in the upward, outward, and onward movement of life. It is necessary for the continued existence of any species that it should have not only the perseverance but pliability, for new conditions appear where perseverance on the old lines would mean extinction. The life forces in their march meet obstacles around, under, over, or through which they must pass, various individuals having a slightly differing sum of environment or heredity secure in their progeny greater pliability in the union.

Nearly all late writers seem to overlook or even to ignore the vast importance of natural crossing. The human intellect may well be amazed at the numerous and surprising variety of the means employed for this purpose, which alone should suggest its paramount importance in the evolution and perpetuity of life.

Crossing is the grand principal cause of all the species and varieties of earth, sea, and air. Crossing these differing lines of heredity caused by the action of past environments on the life forces produces a vast complication of vital movements, habits, tendencies, or memories if you prefer, some of which are

fixed by ages of repetition, while others are of later acquisition, each of these like drops of various chemicals in a pool of water changing by so much the heredity of the subject, all being blended into the whole as we see it in its present state. But past tendencies must fade somewhat as the new ones are added, and as each individual has ancestors in untold numbers, and as each is bound to the others in close symbiosis, like the numerous threads in a fabric, individuals with in a species, by thus having very numerous similar lines of heredity, are very much alike, yet no two are just the same. Thus in the bundles of individuals having similar heredities—which for convenience are called species—we seldom find wide variations, and for the reasons just given; but cross two of these species and see what the result will be. Sharp variations and mutations will appear, not in the first generation, as the two are bound together in a mutual compact which, when unloosed by the next and succeeding generations, will branch in every direction as the myriad different lines of heredity combine and exhibit themselves in various new directions as if the bundle of hereditary tendencies were burst asunder by the impact and mutually arranged themselves in new and often wholly unexpected forms. Many static tendencies become dynamic under the new form of government thus produced.

A study of animals or plants belonging to widely different species and even genera, which have been under similar environments for a long time, will always show a similarity in many respects in the various means they are compelled to adopt for defense in the preservation and reproduction of life.

Desert plants often have thorns, acrid qualities and reduced foliage surface, while in moist climates thorns are seldom seen, and foliage more abundant and not so often acrid or distasteful. Similar environments produce similar results on the life forces, even with the most distantly related plants or animals. This fact alone should be proof enough, if proof were required, that acquired characters are transmitted, even though in opposition to numerous popular theories. All characters which are transmitted have once been acquired. The life forces are constantly pressing forward to obtain any space which can be occupied, and if they find an open avenue, always make use of it as fully as heredity can adapt itself to them.

Fluctuating variations and mutations in animals and plants are all due to the combination and interaction of the various life forces or tendencies and the environmental aids or obstacles which they have to meet. The life forces may be compared to a river constantly pressing forward; environments are the river banks which guide these forces as the banks guide the river. A rock may make a ripple turning a part of the flow aside for a moment, yet the river keeps right on its way; but, if enough rocks are placed on one side of the stream, or if a new and better channel is found, the whole river is turned. This may illustrate the difference between the fluctuating variations and mutations of which we have heard so much of late. Mutations are only fluctuating variations carried beyond the critical point. Other similar illustrations of the actions of these forces can be drawn from the motions of ions, electrons, atoms, or planets.

Second only in power to crossing for producing variations, are abrupt changes of environment such as superabundance of food, sunshine, moisture, and freedom from competition. Some of these are found by plants and animals from time to time in Nature and always when under domestication.

Still another force leading to variations is struggle and hardship, but these are rather negative, only bringing out and making use of force acquired when ancestral conditions were more favorable, and this brings up another matter which has always been the chief stumbling block to a clearer knowledge of heredity, and one of the most difficult to understand and to trace. Sometimes we may, for instance, plant a pure white bean, and reap a full harvest of black ones, or vice versa. These experimental facts seem to contradict all laws of heredity, but not so, such cases only the more verify them. We have generally only to trace the matter back to find that some of the ancestors were of the same color as the strange freak which appeared without apparent cause, but still more complicated will it be when no such ancestral type can be found, and even in such a case careful study may, and often does, reveal the fact that tendencies, like threads in a web of cloth, had so long been pressing for expression that, when the critical point had been reached, the strong tendency which had long been overwhelmed by still stronger ones, came to the surface, but never by chance, the latest tendencies were inherent, and by crossing were doubled in strength or by more favorable conditions were allowed to express themselves.

But sports have also been a source of almost endless discussion and have never been in any manner satisfactorily explained by any theory until the parallelism of grafting and hybridizing was pointed out, and a knowledge of dynamic and static forces in life obtained.

Grafting or budding may be called a bio-mechanical-chemical combination. While crossing by seed is more of a bio-chemical union, yet this last union is often more truly mechanical than chemical, as in the case of mosaic union, which is not unusual when the cross is too abrupt. In fact, every gradation from a purely mechanical union to one of perfect chemical blend is a common every-day occurrence with those who have carried out field experiments on a broad and comprehensive scale.

Under the views of heredity expressed above the two schools—the Lamarckian, which claims direct response of organization to environment, and inheritance of useful acquired characters, and the Darwinian, which claims the working out of useful structures by the influence of selection on small fluctuat-

ing variations—are perfectly harmonized, also the gap between Darwin and Wallace is closed. And now that harmony can be secured between the champions of these three great masters, we may well turn to some more useful work. And right here, the words of Auguste Comte, though written seventy-eight years ago, apply so well to what I have said that they are here quoted, and I fully and freely indorse them and am quite sure that Darwin, Wallace, and Lamarck would all have done the same. He writes,

"If we conceive all possible organisms to be successively placed during a suitable time, in all imaginable mediums, the greater part of these organisms would of necessity finally disappear and leave only those surviving which could satisfy the general laws of this fundamental equilibrium. It is probable that after a succession of analogous eliminations, the biological harmony must have established itself little by little upon our planet, where we still see it continually modifying itself in a similar manner."

I have here given only a passing glance over some of the most prominent features of the action of these forces of heredity which too often seem not to have been placed in the right perspective to obtain a comprehensive view of the subject, and in closing would say that the intricate and most perplexing laws of evolution and heredity are now being traced out with great rapidity, especially since the advent of the more general plan of direct study and experiments of the biological forces themselves, the generalizations drawn from very numerous useful and painstaking special experiments on widely different subjects, and a more general knowledge that all motion, all life, all force, all so-called matter are following the same law of heredity found in plants and animals—a forward movement towards attractions through lines of least resistance.

AGRICULTURAL EDUCATION.

The farmers and teachers of California have joined hands to promote agriculture through education. On December 27th, 28th and 29th a joint session of the State Farmers' Institute and of the California Teachers' Institute and of the California Teachers' Association, will be held in Berkeley. All phases of the question of agricultural education will be threshed out jointly by the farmer and the pedagogue.

The discussion will be opened Wednesday morning, 27th, by L. D. Harvey of Wisconsin on "Experiments in Agriculture in This and Other Countries—What They Should Teach Us."

Dr. A. C. True of the United States Department of Agriculture, Washington, D. C., will talk on "Why the Friends of Agricultural Progress Believe that Agriculture Should Be Taught in the Public Schools." In this talk he will set forth reasons for the teaching of agriculture in the public schools from the standpoint of both the farmer and the educator, and point out what he considers feasible in this line, with special reference to the agriculture and horticulture of California. Dr. True will also outline a system of agricultural education for the state from the university down, and state what he considers the functions of the different institutions which should be established to carry out such a plan.

Among those who will take part in the discussion are Governor Geo. C. Pardee, Judge Shields of Sacramento, E. F. Adams of the San Francisco Chronicle, A. L. Cowell of the Stockton Mail, Prof. E. J. Wickson, Prof. W. J. V. Osterhout, President Benjamin Ide Wheeler, John Sweet of Martinez, Supt. T. O. Crawford of Oakland, W. V. Griffith of the State Grange and many others jointly interested in education and agriculture.

The movement to be started at the Berkeley joint meeting is certain to result in great good to California. The farmer with his practice and the teacher with his theory are sure to reach conclusions of value.

In view of the Berkeley movement the following summary of facts will be of interest:

1. In 1904 there were enrolled in the public schools of California 302,315 pupils, distributed as follows: In the primary and grammar schools, 277,589, or 91.8 per cent; in the high schools, 21,449 or 7.1 per cent; in the University of California, 3277, or 1.1 per cent.

2. The schools of California are doing practically nothing to improve agricultural conditions. The whole trend of education in the elementary and high schools of the state is away from the farm, notwithstanding the fact that at least 40 per cent of the population of the state depends on the various farms of agriculture for a livelihood.

3. Agricultural education in the state is limited to instruction given in the Agricultural Department of the University of California and at the California Polytechnic School at San Luis Obispo, no opportunity being given the 299,038 pupils in the primary, grammar and high schools of the state (98.9 per cent of the total enrollment) to study even the elements in agriculture. In 1904 but 102 pupils were enrolled in the college of agriculture at Berkeley, an average of one student to each 1485 of population in the state. The enrollment of pupils taking the work in San Luis Obispo is even less. And this is the sum total of what education in California does for agriculture as a distinctive industry. The dentist receives more consideration than does the farmer.

4. At the present time many of the high schools of California are preparing students for commercial life; all are preparing students for entrance to the universities as future doctors, lawyers, teachers, dentists, etc. Not one of the 162 high schools of the state, even in agricultural districts, is making any effort to prepare the farmer for his special work, a work that is surely of overshadowing importance to California.

Jackson's Napa Soda cleanses the stomach and renders the eye clear.

NUTWOOD STOCK FARM.

[Continued from Page 18.]

two year old trotting filly Louise Carter by T. C. 2:30, out of the dam of John A. McKerron. This filly has trotted a quarter better than 34 seconds already. The yearling filly by Searchlight 2:03½, out of Georgie B. 2:12½, dam of Miss Georgie, is a pacer and could step a 2:40 gait a week after Chadbourne began driving her.

The above are only a few of the young trotters and pacers that Mr. Carter has bred on his farm and still owns, but space will not permit the mention of them all. Lida W. 2:18¾ by Nutwood is still alive and looks not over half her years. She had a foal last year by Searchlight and one the previous year by Stam B. She is now in foal to Lord Alwin. Lida is 25 years old.

Through his sons Nutwood Wilkes is breeding on at a rate that will make him the founder of a great family. His son Stanton Wilkes 2:10½ is the sire of Cavaliero 2:09½, his son John A. McKerron 2:04½ is the sire of two two year olds that took trotting records below 2:25 in winning races on half mile tracks this year, and his son Nearest 2:22 is the sire

of Alone 2:09½ and other fast ones. His daughters are also producing speed of a high rate. One of them is the dam of that fast pacing mare Miss Georgia 2:10¾, another is the dam of that very fast trotter Lady Mowry 2:12½, still another, produced the fast three year old filly Mona Wilkes 2:11½, winner of the Breeders' Futurity pacing stake this year; and the dam of that very handsome trotter Hoilo 2:15 is by Nutwood Wilkes. Every daughter of his whose produce has been raced is a producer of standard speed.

Padlock is the name of a nice big two year old colt by Zolock 2:05¼ out of Georgie B. 2:12½ that Mr. Carter aims to use some in the stud. Among the mares on the farm are Excella by Monbells (son of Mendocino and Beautiful Bells) out of the great race mare Expressive by Electioneer; Altrosa by Altivo 2:18½ (own brother to Palo Alto 2:08¾), dam Lustrosa by Boodle, second dam Lulu by Electioneer; Zeta Carter by Director 2:17; K. W. by Klatawah 2:05½, dam Queen C. 2:28½ by Nutwood Wilkes, and others equally as well bred.

From the horses enumerated above it will be seen that Mr. Carter has collected as finely bred a lot of mares and fillies at his farm as there is on any breeding place in the United States. They are bred in producing lines on both sides, were selected for their individuality and speed and from them are coming race winning and money getting colts and fillies

year after year. Their owner once remarked to the writer that in the horse breeding business he was pursuing the same methods which made his car building business so successful. He selected the very best of everything to begin with, but did not stop at that. Whenever he saw an idea that was better than his own he was ready to adopt it, and always aimed to keep in the front of the procession. He early recognized the fact that in Williamson's Belmont, George M. Patchen Jr., Nutwood, Electioneer, Geo. Wilkes and others the trotting horse had foundation blood that was very choice, but in building up and improving the breed his aim was to erect a construction on this foundation, by using up-to-date material for the superstructure. In other words progress was his motto, and he does not believe it wise to keep going back. With this idea in view he has patronized and will continue to patronize the best stallions of the present, and where young horses are proving their merit as sires of early and extreme speed he will not hesitate to send his mares to their court, believing that the true course of horse breeding is onward and upward, and that the best results will be obtained by piling the crosses that have the greatest speed and the most endurance on top of one another until the trotter and pacer will be born with inherited speed which will only need the school of a good trainer to develop it.

The Great Eastern Handicap.	Six furlongs.....	Cash value.... \$7,500

FOR THE AUTUMN MEETING 1908

The Futurity. \$10,000 added—\$3,750 to the Breeders.

BY SUBSCRIPTION of \$20 each, OR ONLY \$10 IF THE MONEY BE SENT WITH ENTRY, for mares covered in 1905, and a further subscription of \$50 each for the produce of such mares unless struck out by NOVEMBER 1, 1907; or \$100 unless struck out by July 15, 1908. Each starter to pay \$50 additional, all of which shall go to the second and third horses as further provided.

The Coney Island Jockey Club to add TEN THOUSAND DOLLARS (\$10,000); the second to receive \$1,250 of the added money and two thirds of the starting fees; the third \$750 of the added money and one-third of the starting fees.

The nominators of the winner, of the second horse and of the third horse, namely the nominator of the mare, to receive \$2,000, \$1,250, and \$500 of the added money respectively, whether they are the owners of the horse when the race takes place or not.

Colts 122 lbs., fillies and geldings 119 lbs. Winners of two races of \$4,000 or one of \$7,000, 4 lbs. extra; of three of \$4,000, two of \$7,000 or one of \$15,000, 8 lbs. extra.

If mare or stallion has not produced a winner prior to January 1, 1906, the produce will be allowed 3 lbs. for either or 5 lbs. for both, said allowance to be claimed at time of entry. Maidens allowed 5 lbs., which allowance shall not be cumulative.

If a mare nominated for this event drops her foal before the first of January, 1906, or if she has a dead or more than one foal, or is barren, the entry of such mare is VOID, and the subscription if paid, will be returned.

By filing prior to NOVEMBER 1, 1907, with the Coney Island Jockey Club an accepted transfer of the produce with its engagement in this event, the original subscriber will be released from any liability as to the engagement of the produce. Six furlongs.

The McKinney Stallion

KENNETH C. 2:17

THREE
YEAR
OLD
RECORD

Sired by McKINNEY: dam MOUNTAIN MAID (dam of Tom Carneal 2:48½) by Cresco 4908 (sire of Allie Cresco 2:13, etc.); next dam by Cloud.

Will make the Season of 1906 at

PLEASANTON, CAL.

KENNETH C was one of the fastest of an exceptionally good lot of three-year-olds that raced in California in 1905. He is a splendid individual, has size, style and quality, and the grandsons and granddaughters of McKinney through Kenneth C. will be equal to any in the land.

Terms \$30 for the Season,
\$15 for Single Service.

Address

S. K. TREFFRY, Pleasanton, Cal.

The Perfectly Gaited Trotting Stallion

ALTA VELA 2:11 1-4

(Reg. No. 22449)

Sire, ELECTIONEER, sire of 166 in 2:30 and grandsire of Major Delmar 1:59 3/4.

Dam LOKITA 2:18 1/4 (dam of Alta Vela 2:11 1/4 and Palori 2:24 1/4) by Piedmont 2:17 1/4; second dam, Lady Lowell (dam of Ladywell 2:16 1/4 and Lorita 2:18 1/4) by St. Clair; third dam, Laura, dam of Doc, sire of Occident 2:16 1/4.

Address all communications to BREEDER AND SPORTSMAN, 36 Geary St., San Francisco.

TWO HIGH-CLASS STALLIONS
For Sale at a Bargain.

JOHN A. 2:12 3-4 (8), pacer, sired by Wayland W.; dam Lady Moor by The Grand Moor. Has paced miles in 2:08 1/4 and can do it again when in condition. He has some very fine looking colts, yearlings and two year-olds. JOHN A. is a good individual, a high-class race horse, and will make a great sire of race horses and high-class roadsters.

SIR CARLTON 2:36 1/2, trotter, three years old, by Nutwood Wilkes; dam Lady Keating by Stam B.; second dam Able Woodard (dam of Diawood and Abdlne) by Nutwood.

These horses will do to race the coming season and will win in their classes. It is imperative that I sell them without delay, as my business calls me elsewhere and I will be unable to give them attention. For reasons stated I will sell both of them for less than I would have taken for one of them some time ago, and I would like to hear from some of the parties whose offers were not accepted, and believe we can make a trade. Apply to or address A. E. MASTIN, 1016 Nineteenth Street, Sacramento, Cal.

McKINNEY STALLION FOR SALE.

ONE OF THE GRANDEST LOOKING AND best bred McKinney stallions ever foaled is offered for sale. He is five years old, sired by the great McKinney 2:11 1/4, dam by Dexter Prince, that sired the dam of Nora McKinney 2:12 1/4 (trial to wagon 2:09); second dam by a son of Electioneer; third dam by McDonald Chief, sire of the dams of Tom Smith 2:13 1/4 and Stella 2:15 1/4. This stallion has never raced and has not been trained, but has trotted miles better than 2:30 and quarters in 35 seconds. Stands 15 3/4 weighs 1050 pounds, is a beautiful bay with black points and without a pimple. Is an exceptionally handsome horse fine disposition and has marvelous endurance. No horse living has cleaner, straighter or more perfect legs. A grand prospect to train and a sure money-maker in the stud. Would make one of the grandest roadsters in America. For further particulars address BREEDER AND SPORTSMAN, 36 Geary St., San Francisco.

FOR SALE OR LEASE.

Two Prince Airlie Stallions.

PORTOLA 37413, a handsome golden bay, 7 years old, 16 hands, weighs 1190 lbs.

MENLO BOY 37401, a magnificent brown with white points, 6 years old, 16 1/2 hands, weighs 1200 lbs.

These two horses are full brothers being sired by Prince Airlie 28045; he by Guy Wilkes 2:15 1/4, sire of Fred Khol 2:07 1/2, Hulda 2:08 1/2, Seymour Wilkes 2:08 1/4; first dam Signal by Del Sur 2:24; second dam Lady Signal 2:35 1/2 by Signal 3327. Both of these horses are very fast for the amount of work, being only a few months last year, showing quarters around 34 and 35.

For further information apply to P. H. McEVROY, Menlo Park, Cal.

Registered Shire Stallion
FOR SALE.

JET BLACK STALLION; WEIGHT 1750; seven years old. Is a blocky built, big boned horse and a sure foal getter, and his colts will be shown. Price reasonable. For further particulars apply to office of BREEDER AND SPORTSMAN.

Chronic Bronchitis and Catarrh of the Bladder Cured in 48 Hours.

Superior to Copaliba, Cubeba or on

We Guarantee that one tablespoonful of Caustic Balsam will produce more actual results than a whole bottle of any liniment or spavin cure mixture ever made.

CAUSTIC BALSAM FOR CUTS, BRUISES AND SPAVIN, ALSO HUMAN AILMENTS.

Taylor, N. Y., Feb. 10, 1905.
The Lawrence-Williams Co., Cleveland, Ohio.

I have used GOMBAULT'S CAUSTIC BALSAM for cuts and bruises and also for bone spavins with good success. Have also used it a good deal on human flesh with equally as good results. Do not calculate to be without it, as I consider it the best liniment or blister on the market.

A. D. LINCOLN.

IT IS THE BEST LINIMENT.

Grassflat, Pa., Jan. 27, 1905.
The Lawrence-Williams Co., Cleveland, Ohio.

I used your GOMBAULT'S CAUSTIC BALSAM on a horse that had large side bones and entirely cured him. I keep it on hand at all times. It is the best liniment I can get.

GUY JOHNSON.

CAUSTIC BALSAM CURED CAPPED HOCK, SPAVIN, ETC.

Kingsley, Mich., April 6, 1904.
The Lawrence-Williams Co., Cleveland, Ohio.

I have used GOMBAULT'S CAUSTIC BALSAM on my mare, which had a bad capped hock, and in ten days had her cured entirely sound as ever. Also used it on another mare for bone spavin, and two applications killed spavin. Used it on two other horses for what is called "Pipes," killed and cured both cases. I have cured every case that I have used your BALSAM on, and would say that GOMBAULT'S CAUSTIC BALSAM is an indispensable remedy, and would not be without it at twice the cost.

JNO. S. MICKS.

USED SUCCESSFULLY FOR 15 YEARS

Hampton, Ky., Jan. 25, 1904.
The Lawrence-Williams Co., Cleveland, Ohio.

I have been using GOMBAULT'S CAUSTIC BALSAM over fifteen years, with good results in my family, for sore throat. Also on my stock, mostly for fistula. I have never failed to cure every horse that I have used GOMBAULT'S CAUSTIC BALSAM on. It never leaves a blemish after using, the hair coming back the same color, where other remedies leave great scars. I have taken off blemishes on horses with CAUSTIC BALSAM.

JULIUS M. UTZ.

CAUSTIC BALSAM IS THE ONLY REMEDY.

Anthon, Ia., Feb. 8, 1905.
The Lawrence-Williams Co., Cleveland, Ohio.

I have tested your remedy and can say that it is the best I have tried for years. It can't be beat. GOMBAULT'S CAUSTIC BALSAM is the only remedy there is made to do the work.

F. W. ZEGLIN.

The Accepted Standard VETERINARY REMEDY

Always Reliable. Sure in Results.

None genuine without the signature of
The Lawrence-Williams Co.
Sole Importers & Proprietors for the U.S. & CANADAS. CLEVELAND, O.

NOTHING BUT GOOD RESULTS.

Have used GOMBAULT'S CAUSTIC BALSAM for more than 20 years. It is the best blister I have ever tried. I have used it in hundreds of cases with best results. It is perfectly safe for the most inexperienced person to use. This is the largest breeding establishment of trotting horses in the world, and use your blister often.—W. H. RAYMOND, Prop. Belmont Park Stock Farm, Belmont Park, Mont.

USED 10 YEARS SUCCESSFULLY.

I have used GOMBAULT'S CAUSTIC BALSAM for ten years, have been very successful in curing curb ringbone, capped hock and knee, bad ankles, rheumatism, and almost every cause of lameness in horses. Have a stable of forty head, mostly track and speedway horses, and certainly can recommend it.—C. C. CRAMER, Training Stables, 990 Jennings Street, New York City.

Sole Agents for the United States and Canada.
The Lawrence-Williams Co.
TORONTO, ONT. CLEVELAND, OHIO.

NOTHING ON EARTH BEATS IT.

Park Ridge, Ill., Dec. 2, 1904.
The Lawrence-Williams Co., Cleveland, Ohio.

I used your GOMBAULT'S CAUSTIC BALSAM when you first put it upon the American market. I have always had it since, and have it now in my medicine case. There's nothing on earth that beats it. I am from Missouri. If there is anything better, show it to me. It's the only thing if you are out for the best.

W. T. SMITH.

VERY INTERESTING TO A HORSE OWNER.

Kirkville, Mo., Jan. 29, 1904.
The Lawrence-Williams Co., Cleveland, Ohio.

I have cured lots of cases of fistula and spavin bone bog, blood, with GOMBAULT'S CAUSTIC BALSAM. On bog and blood spavin removed all the bunch; but on bone, killed it, cured the lameness and removed a larger part of the bunch. Can remove all if taken in time; also splints, curbs, thoroughpins—in fact, all enlargements—and have met with the very best of results.

S. J. MILLER.

WILL DO MORE THAN ANY OTHER MEDICINE.

Stuart, Neb., Jan. 31, 1905.
The Lawrence-Williams Co., Cleveland, Ohio.

Six years ago I took a bunch off a horse's leg just below the knee as big as a man's head. I am now using it on a colt which cut his foot in a wire fence and grew a new hoof, and foot is enlarged above hoof. The foot is gradually getting smaller, and think in a little time will be down to its natural size. GOMBAULT'S CAUSTIC BALSAM will do more than any other medicine I ever used for removing growths on horses.

W. A. HISCOX.

PLENTY OF OPPORTUNITY AND SUCCESSFUL.

McLaughlin Ranch, Water Valley, Tex.
Feb. 6, 1904.
The Lawrence-Williams Co., Cleveland, Ohio.

I have used several bottles of your GOMBAULT'S CAUSTIC BALSAM for various ailments, such as strains, fistula, enlargements, etc., with satisfactory results. Our home stock numbers about 250, so we have plenty of opportunities to try it.

STANLEY TURNER.

CURED EISTULA AND ORDERS MORE

Elk Run, Va., Feb. 6, 1904.
The Lawrence-Williams Co., Cleveland, Ohio.

I wish you would please hurry this matter up as I need the medicine right away. I used GOMBAULT'S CAUSTIC BALSAM once before for fistula and I had fine results. The horse is entirely well.

HERBERT COX

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is Invaluable.

INDIANAPOLIS

The LOGICAL and the BEST MARKET
For CALIFORNIA TROTTERS
AND PACERS

Recent sales have clearly demonstrated that INDIANAPOLIS is the country's greatest sales centre for RACING PROSPECTS and BREEDING STOCK OF MERIT, and future sales will all the more emphasize this already proven claim for the metropolis and traffic center of the Ohio Valley section.

SIDNEY DILLON and MCKINNEY were purchased by INDIANA BREEDERS.

INDIANAPOLIS SALES are frequented by liberal buyers not only from the MIDDLE WEST, but also by those same EASTERN BUYERS who in past years gave prestige to the sales at CLEVELAND.

EXPRESS CHARGES on carload shipments, CALIFORNIA POINTS TO INDIANAPOLIS, are less than FIFTY DOLLARS PER HEAD—a nominal expense in comparison to the increment of values OBTAINABLE AT INDIANAPOLIS.

**NEXT SALE AT
INDIANAPOLIS**

FEBRUARY 26, 27, 28, MARCH 1, 2, 3, 1906.

Horsemen, who may desire to consign stock of real merit to our great ANNUAL SPRING SALE, should advise us AT ONCE that arrangements for co-shipment with other California consignments may be made before it is too late to do so.

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.

The horse CAN BE WORKED AS USUAL. For BARBED WIRE CUTS, CALKS, SCRATCHES BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.

It is very adhesive and easily applied to a watery as well as a dry sore.

Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gail Cure offered which can justly even claim to be a competitor.

We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of

advertising, the sales of 1900 were 100 per cent greater than the aggregate sales of Gail Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.

It is a quick and sure cure for those troublesome skin cracks under the fetlock which injure and often lay up race horses.

All Trainers Should Have It in Their Stables.

PRICE:—3 OZ. BOX, 25c; 1 LB. BOX, \$1.00.

Sold by all Dealers in Harness and Turf Goods. If not in stock ask them to write any Jobber for it

OCCIDENT STAKE OF 1908

TROTTING STAKE FOR FOALS OF 1905

To be Trotted at the California State Fair of 1908. Entries to Close January 1, 1906, with ALBERT LINDLEY, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1907; \$25 to be paid January 1, 1908, and \$50 thirty days before the race. The Occident Cup, of the value of \$100, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start. A horse not winning a heat in the first three shall not start for the fourth heat unless said horse shall have made a dead heat, but horses so ruled out shall have a right to share in the prize according to their rank in the summary at the close of their last heat. Otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1903 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1906.

ALBERT LINDLEY, Secretary.

Quinn's Ointment

Will Make A Horse Over;

will put sound legs under him and will save him from the cheap hawker and trader. It is the standard cure for Sprains, Curbs, Splints, Windpuffs and all the various lumps and hunches of like kind. Keep it always on hand and you will be prepared when trouble comes. Leading horsemen everywhere know it and use it.

Mr. H. H. Clark, Fredonia, N. Y., writes: "The bottle of Quinn's Ointment purchased from you about two years ago removed a curb and thoroughpin and did it for good. My horse's leg is as smooth as ever."

Price \$1.00 per bottle. Sold by all druggists or sent by mail. Write for circulars, testimonials, etc.

SAN FRANCISCO, CALIFORNIA.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

FOR THE AUTUMN MEETING 1908

The Futurity. \$10,000 added—\$3,750 to the Breeders.

BY SUBSCRIPTION of \$20 each, OR ONLY \$10 IF THE MONEY BE SENT WITH ENTRY, for mares covered in 1905, and a further subscription of \$50 each for the produce of such mares unless struck out by NOVEMBER 1, 1907; or \$100 unless struck out by July 15, 1908. Each starter to pay \$250 additional, all of which shall go to the second and third horses as further provided.

The Coney Island Jockey Club to add TEN THOUSAND DOLLARS (\$10,000); the second to receive \$1,250 of the added money and two-thirds of the starting fees; the third \$750 of the added money and one-third of the starting fees.

The nominators of the winner, of the second horse and of the third horse, namely the nominator of the mare, to receive \$2,000, \$1,250, and \$500 of the added money respectively, whether they are the owners of the horse when the race takes place or not.

Colts 122 lbs., fillies and geldings 119 lbs. Winners of two races of \$4,000 or one of \$7,000, 4 lbs. extra; of three of \$4,000, two of \$7,000 or one of \$15,000, 8 lbs. extra.

If mare or stallion has not produced a winner prior to January 1, 1906, the produce will be allowed 3 lbs. for either or 5 lbs. for both, said allowance to be claimed at time of entry. Maidens allowed 5 lbs., which allowance shall not be cumulative.

If a mare nominated for this event drops her foal before the first of January, 1906, or if she has a dead or more than one foal, or is barren, the entry of such mare is VOID, and the subscription if paid, will be returned.

By filing prior to NOVEMBER 1, 1907, with the Coney Island Jockey Club an accepted transfer of the produce with its engagement in this event, the original subscriber will be released from any liability as to the engagement of the produce. Six furlongs.

San Francisco, Saturday, December 30, 1905

THERE IS WORK TO DO during the next two months by every person interested in the breeding and training of harness horses. A good circuit of harness racing in California in 1906 is absolutely essential to the prosperity of horse breeders and owners, and if they will only get to work at the formation of a circuit it can be accomplished without much difficulty. The live and energetic people of Southern California have already announced their intention of giving a good meeting at Los Angeles in June and another late in the season. The State Agricultural Society will offer good purses for harness races, and the Pacific Coast Trotting Horse Breeders' Association can be depended upon to give one of its high class meetings in August as usual. But what are the horsemen of San Jose, Fresno, Stockton, Woodland, Santa Rosa, Marysville, Salinas, Hollister, Vallejo, Pleasanton and other towns where good mile tracks are located going to do in regard to giving meetings? In every one of the towns mentioned an excellent meeting can be held if the horsemen themselves but take the initiative and do a little hard work. The time to commence is right now. Dates should be claimed in January and purses announced very soon thereafter. Owners and trainers want to know how much racing there will be in California this year before they make up their training strings. If there is a good circuit of eight or ten meetings announced by February, more horses will be trained than for many years past. Nearly every owner wants to race his horses at home, but if the circuit is as small as it was last year, those with good strings will cross the Rocky Mountains. The time to announce dates is during the month of January and purses should be announced before the first day of March. We therefore, say to the horsemen of the towns mentioned above, and the managers of the tracks at those places: It is time to get a move on. What are you going to do about a race meeting in 1906? Let us hear from you, one and all. The harness horse business is in good shape but a good circuit will raise prices all along the line. The number of mares bred in 1906, will also be greater if there is a good circuit, as the interest in harness horses will be increased. It behooves everyone connected with the industry in any way to get his coat off. There is work to do and it must not be put off.

JUST A WORD to those who own mares that they intend breeding this year. Don't cross two different types with the expectation of getting a happy medium between the two. It will not result more than once or twice out of ten times. If you own a draft mare of Percheron blood and type select the best Percheron stallion you can find in your neighborhood to mate her with. If your mares are Clydesdales or Belgians, stick to those breeds and try to improve and build up the stock you have. If you own a handsome trotting stallion to mate her with. If your trotting mare is a slab-sided, homely brute don't get the idea into your head that her foal from a handsome coach horse or a hackney will be as handsome as its sire. Breed your mares with some judgment, and remember that it takes a very long time to establish a type or a breed. You cannot get what you want from one cross of any two types of horses. So stick to the breeds already established and try to get your stock as close to full blood as you can. If a farmer owns some large coarse draft mares of mixed breed and desires to improve his stock let him select the type of horse he likes best of all the draft breeds and breed his mares to him. When the fillies from these mat-

ings are old enough mate them with a draft stallion of the same breed and continue along this line until your colts are near enough full blooded to be registered. Then register the youngsters as fast as they come along and stick to this one breed. It is the only way to get horses that will bring good prices in dull times.

THE CHRISTMAS NUMBERS of the Eastern horse papers that have reached our desk are all, without exception, very handsomely printed and filled with good reading. The American Horse Breeder of Boston was the first to come, then the Chicago Horseman, quickly followed by the Horse Review of the same city, then the Trotter and Pacer of New York, the Kentucky Stock Farm, the Rural Spirit of Portland and the Horse World of Buffalo. Each number contains a feast for a horseman and has individuality of its own that makes it absolutely essential to one's satisfaction that he reads them all. We advise every person interested in harness horses to buy all the Christmas numbers. They are worth more than the price asked.

GET YOUR STALLION ADVERTISEMENT before the public early. Remember that owners of brood mares like to study over the best cross for their mares, and that the blood lines of your horse may be just the ones they have decided will be the best, but do not know where to get. If your advertisement brings but one mare it will pay, and most breeders have come to the conclusion that horses not advertised are not the ones to patronize.

Mr. J. H. Williams is training two full brothers to Danube 2:12½ at the Los Angeles track.

Mr. O. A. Lowe, the well known farmer and horse dealer of Woodland, recently made a trip through Mexico, and states that he saw more fine carriage teams on the streets of the Mexican capital than he has seen in any city in this country. Dealers of Chicago and other points in the Middle West find a ready sale in Mexico for fine pairs and high prices do not stop the sales. The wealthy Mexicans want the best they can buy and the parade of fine turnouts on the streets of the city of Mexico every afternoon is equal to a horse show.

The case of the National Trotting Association against East View Farm was decided in favor of the farm. This is the case in which the charge was made that Monroe Salisbury, who was under suspension, was directing the racing stable. The evidence was to the effect that Mr. Salisbury was only an employee and that the entries were made by Mr. Butler and the racing managed by Chas. DeRyder.

Dan Misner is located at Pleasanton for the winter with eight head of trotters and pacers, among them the trotter Homeway 2:14½, owned by Gus Lindauer of this city, who thinks the gelding holds a world's record. In the race at Los Angeles where he beat Lady Jones and several other good ones in a four-heat race Homeway trotted the second heat in 2:14½, which Mr. Lindauer thinks is the fastest time ever made in a race by a fifteen-year-old trotter. Homeway is certainly a great trotter for his age and the razzooing he has had. Mr. Misner thinks he can trot a mile in 2:12. If anyone owns a fifteen-year-old trotter that has beaten 2:14½ in a race, or has heard of one that has done it, Mr. Lindauer would like to hear about it.

Secretary Horace W. Wilson has already rented seventeen of the private boxes in the grand stand at the Kentucky Breeders' Association track, Lexington, Ky., for the fall meeting of 1906, which leaves only seven boxes so far unengaged for next season. During the spring a dozen or more boxes will be added to the stand.

A prominent horseman said to a New York correspondent in the lobby of the Murray Hill Hotel during the Board of Review meeting: "You know the Grand Circuit is not always a harmonious body. It would not surprise me to see two factions spring up within the next four or five years, which would result in a split and two big circuits—one in the East and one in the West, with a season's windup, as now at some Southern point where the best horses of each circuit could meet. I am not so sure but what a division of the Grand Circuit into an Eastern and a Western circuit would be a good thing for racing men, provided the two circuits were of equal caliber. It would save horsemen much expense in shipping, and give them twice as many chances to earn money."

Five thousand people, prominent in society and politics, attended the formal opening of the New Century speedway, Washington, D. C., held under the auspices of the Road Drivers' and Riders' Association of Washington. The course is on a government reservation of about a mile and seventy yards in length, and runs from a point near the old Naval Observatory south to and along the Potomac river front, whence the speedway turns into Nineteenth street, following that for a considerable distance. The course is within a half mile of the White House grounds. A program of five trotting and pacing races, half-mile heats, in which local horses participated, had been provided for opening day.

John Shepard says Ethel's Pride 2:06¾ and Reina 2:12¾ make the nicest pole team he has ever had anything to do with. The dean of the road is a master in the art of mating trotters.

Charley DeRyder holds a record. The Board of Review gave him back half of that \$100 which Starting Judge Frank Walker put on him at Readville a year ago last August.

The stallion Allie Wilkes 2:15 is now credited with forty-four standard performers, having put two new ones in the list this year. Three secured reduced records. Allie Wilkes is owned at Niles, Ohio, where he is in the stud.

A patent has been taken out on a sliding seat for the racing sulky. The inventor claims that the shifting of the driver's weight will materially increase the speed of the horse at times while at others the animal will be able to travel at greater ease upon the position of the seat being changed again.

Dan Selsor, who left Pleasanton for San Jose in charge of Ed Mills stallion, Lecco 2:09¾, and found on reaching the Garden City that the horse was billed through to Macon, Georgia, and there was nothing else to do but stay with him, has returned to Pleasanton. Dan now claims the record as a box-car tourist, Lecco having been shipped in that sort of car. He says no horse ever made as long a trip and left the car feeling and looking so well as Lecco did.

"Columbus" writes as follows from Kansas to the Western Horseman: "Every few weeks a shipment of carriage, coach and road horses passes through Kansas, bound for the City of Mexico. Only recently Jose Balkna, of the City of Mexico, went over the Santa Fe railroad with an express-car load of twenty-eight head of trotting bred horses suitable for carriage or coach use, that cost from \$800 to \$2500 per pair. The Mexicans are critical buyers and willing to pay good prices for horses with quality, size, style and action. For a number of years this trade with Mexico in trotting bred horses large enough to draw a carriage has been steadily increasing, and promises to grow better in the future."

The statement that the Fasig-Tipton Company would not hold a sale at Cleveland this year is untrue. This company did not hold a sale at Cleveland last May for reasons too well known to need mention here, but never intended to abandon the Cleveland market where it owns a completely equipped sales mart. The Cleveland sale of this company will be held in May, 1906, the exact dates to be announced later. This sale has always been the one sale of the year that appealed to California horsemen, offering them the one opportunity to show speed "under the watch," an opportunity afforded them by no other sale nor no other sales firm. Even at this early date we feel able to say that the 1906 Blue Ribbon Sale, as the Cleveland sale has always been called, will rank favorably with any sale ever held there.

The harness horse business is looking like old times at Marysville, where the track is in fine shape for winter work. J. J. Sangster and "Dad" Morris of Tulare are at the Marysville track with six head of very promising ones. They are working a son of McNear for Col. Forbes of the Western Pacific Railway that is showing up well. Also two fine fillies owned by William Leech that are by Baron Bretto, out of Silver Bells by Silver King. There are many other horses at the track, all doing well. There may be something doing in the way of a harness meeting at Marysville during the summer of 1906. The coming of the new railroad has made the whole country boom, and a good harness meeting would draw a large attendance.

A. E. Mastin of Sacramento has sold to Mr. Al Pryor of Ben Lomond, Santa Cruz county, the pacing stallion John A. 2:12¾ by Wayland W. 2:12½, sire of Bolivar 2:06¾, etc. The price paid was \$1200. John A. is a fine looking, large stallion, with a world of speed, and being well bred should be an excellent horse for Santa Cruz breeders to patronize.

ANSWERS TO CORRESPONDENTS.

T. A. R.—The stallion Winwood by Anteeo is not registered.

C. P. C.—Graceful George is a chestnut horse, sired by Aleona Jr., dam by Washington. He made a record of 2:23 at Portland, Oregon, June 29, 1893. We believe he is now owned in Fresno county, Cal. We do not know his age.

S. G. C.—The outcome of breeding your trotting mare to a Percheron stallion is one of those things "no fellow can find out" until the foal is born and reaches maturity. We have seen a few very handsome horses bred that way, and more that were non-descripts. You will be mixing two breeds and there is no telling what the result will be. Would advise you to secure a Percheron mare weighing not less than 1500 pounds to breed to the horse you name and to breed your trotting mare to the best trotting stallion within your reach.

J. W. B.—The dam of Flora G. 2:25, by Altoona, was Susie by Conway's Patchen, son of Geo. M. Patchen Jr. 31; grandam Rosa, said to be by Nigger Baby. Hugo 2:27½ was by Electioneer, dam Helpmate, thoroughbred mare by Planet, second dam by Vandal.

Jackson's Napa Soda does not tangle the feet.

NOTES AND NEWS.

Happy New Year to all.

Get up a harness meeting in your county.

A good California circuit will do much to increase the value of trotters and pacers.

Stallion owners should make their announcements early. Many mares are bred each year in February.

The show season just closed has been an interesting one for those who admire the little Shetlands and follow the course of their fortunes at the fairs and horse shows. Some very strong exhibits have been seen both east and west, and the competition has in many cases been keen. Several of the shows have adopted the rule recommended by the American Shetland Pony Club which requires that ponies exhibited shall be ridden or driven by children under 15 years of age, and there is no more interesting feature of a show than a ring of Shetlands piloted by their young masters and mistresses.

A subscriber of the Breeder and Sportsman wishes to know if any of our readers can give the breeding of a horse called Tippo, shipped to California about 22 years ago from Canada, and after making one season about Petaluma and Sonoma was returned to Canada. Anyone knowing anything about this horse will confer a favor by notifying this office.

The Biggs Stock Farm at Burns, Oregon, is the home of the handsome and fast stallion Dazzler 2:26½. Among the brood mares at this farm are the following whose names are familiar to California breeders: Fenella, dam of Janice 2:08¼, etc., by Fallis; Judith 2:25, by William Harold; Kitty B., by Sidney; Lildine Wilkes, by Nutwood Wilkes; Nellie Burns, by Guy Wilkes and Menoco, by Mendocino. Mr. Biggs has other mares by Welcome, Marvin Wilkes, Starboul, Kibir, Arthur Holt, Costello, Challenger Chief and others, and has young stock and racing prospects for sale.

The second payment on the Occident Stake of 1907, and the third on the same stake of 1906, are both due and payable January 1st. If not paid by that time, former payments are forfeited.

John L. Sparrow is kept pretty busy these days selling Miller carts to owners who are beginning to jog their prospective winners for the season of 1906.

Mr. C. A. Durfee is getting out of the horse business pretty fast. He advertised all his horses for sale two months ago and has disposed of all the mares—four in number, and all the colts. He has two stallions left, Galindo, by McKinney out of Elsie (dam of 5) by Gen Benton, and Almaden 2:22 as a two year old by Direct 2:05½ out of Rose McKinney by McKinney.

The famous trotting mare Sweet Marie, owned by Mr. William Garland, of Los Angeles, figured as the principal in a runaway accident at Albany, N. Y., recently. She is being wintered at Alta P. Macdonald's place on the Albany road in Albany. While being driven in charge of Mr. Macdonald's second trainer, the animal became frightened at an automobile, shied and broke one of the wheels of the exercising cart, throwing out the driver. The mare ran several miles directly to her stable, and although she freed herself entirely from the vehicle and harness she was uninjured. The driver was not seriously hurt.

Crouch & Son, the well known dealers in draft and coach stallions purchased last week in Oregon the McKinney stallion Kinney Mac, and sent him to Indiana for stud duty.

According to a report in circulation, Louisville may get in the trotting game again next year, and an association will be formed for the purpose of holding meetings. In that event Douglas Park will be used, and the sport which was popular several years ago may be revived. Frank G. Hogan, president of the Kentucky Live Stock Breeders' Association, is said to be at the head of a movement to be one of one hundred men to contribute \$100 each for the purpose.

In case of horses, as with human beings, the advantage of possessing a competent nurse and proper accommodation for an invalid cannot be overestimated. A man who understands the care of a sick horse, and who is possessed of a sympathetic disposition and a liking for the work, is simply an invaluable acquisition in a large stable, and should be appreciated as such. A horse being, of course, incapable of conveying an idea of what its sufferings are, except by more or less indefinite signs of pain, it is most essential that the attendant in charge should be an observant as well as a careful man, for, should complications arise from some apparently trivial source, it is obviously desirable that they should be taken in time.

Grattan 2:13, is proving the leading sire of extreme speed this year. Three of his get have taken records for 2:10, another has beaten 2:05, and five others have gone from 2:08 to 2:12 in races.

It is reported that an offer of \$15,000 for the fast three-year-old colt Silence, by Chimes, dam Whisper 2:08¼, by Alexander 2:20½, has been turned down by Samuel Hyde of Fall River, Mass. It was Silence that forced Bon Boyage 3, 2:12¼ to his record.

Vance Nuckols, the well known trainer who resides at Glenville, Ohio, has four year old stallion that he thinks would make a success in California. The colt is certainly bred right as he is by the great Baron Wilkes, first dam Geraldine 2:20, dam of 3 in the list, by Alcyone, second dam Alice Stoner 2:24¼, dam of 3, by Strathmore, third dam old Ned dam of 6, standard performers, three producing sons and three producing daughters.

Mr. Geo. H. Birdno, of Safford, Graham county, Arizona, visited Petaluma two weeks ago and purchased from Brown & Brandon the very handsome and fast stallion Meridian 2:12¼, shipping him to Safford the same week. Meridian was not only a fast and game race horse, but is proving an excellent sire, his colts all being strong lusty fellows with great natural speed. Meridian is by Samuocolor 2:13½, dam Sidane by Sidney, second dam Addie S. by Steinway. No horse on the coast carries as much of the Strathmore blood in his veins as Meridian and he should be a very valuable horse for the horsemen of Arizona to patronize. If trained he could doubtless lower his present record as he is as sound as the day he was foaled.

John Martin, the well known fruit grower of Woodland, Yolo county, has a trio of geldings by Diablo 2:09¼ that look like future prize winners. He has a three-year-old and a two-year-old, both bays that are fine individuals, and very promising from a speed standpoint. A brown two-year-old by Diablo out of Buttonette, own sister to Gen Logan, sire of Miss Logan 2:06¼, is certainly one of the largest and handsomest geldings the writer has seen in many a day. Both these two-year-olds are natural pacers.

Zombowette by Zombro reduced her record to 2:16¼ in a winning race at Phoenix, Arizona, on Christmas Day. This mare was bred by L. H. Todhunter of Sacramento and is out of a mare by Silver Bow 2:16. She is six years old.

The Coronado Country Club has planned two months of fine sport, commencing on February 5th. The program includes polo pony racing, club tennis championships in golf for men and women, long-distance automobile race from Los Angeles to Coronado, automobile races for two and four cylinder cars, economy races for automobiles and a pigeon shooting carnival. The last event will take place the first part of April. Many local men will compete.

A dozen farmers and business men of Woodland, Yolo county, have recently formed an association and purchased the French coach stallion Caton 3:06, for the sum of \$2,700. Caton is said to be one of the finest specimens of this breed ever brought to California, and will doubtless be well patronized by the horse breeders of Yolo county.

The chestnut gelding Custer owned by Mr. J. C. Adams of Phoenix, Arizona, is showing great speed at the pacing gait. He started against Zolock, Hazer Patch and Daedalion at the Phoenix Fair this week and won third money, finishing in front of Daedalion. For a green horse this is a remarkable showing. Custer is by Sidney Dillon, out of Maud, dam of Maudee 2:24¼ and Legation 2:23½ by Nutwood, and was bred at the Santa Rosa Stock Farm. He was purchased by Mr. Adams as a two-year-old at the farm sale in this city in June 1903, for \$120. Horsemen who have seen him in his work believe he can beat 2:10 rather handily.

The Spokane Inter-State Fair has \$14,240 on hand the greater part of which will be used for improvements. This fair is one of the most successful held on the Pacific Coast.

The splendidly appointed mile track at Del Monte will be put in shape for winter training and should be one of the most popular training tracks on the coast.

The Baywood Stud at San Mateo is devoted exclusively to the breeding and training of high stepping hackney bred harness horses. Green's Rufus, a frequent prize winner is the stallion used. He is an imported hackney and has sired many high class harness horses. For any information in regard to breeding mares to Green's Rufus, or the purchase of well mannered horses fit for park or carriage use, address Walter Seely, Manager, San Mateo, Cal.

About the best equipment a young man can have for the battle of life is a course in Heald's Business College. It fits him for business and the man who knows how business should be conducted, never lacks employment in any country.

Wayland W. 2:12½, sire of Bolivia 2:06¼, the leading money winner of the year, will make the season of 1906 at Santa Rosa. Wayland W. is one of the most successful sires for his opportunities there is in California. He has sired six 2:15 performers as follows: Bolivan 2:06¼, Nelly R. 2:10, Arthur W. 2:11¼, Morosco 2:12, John A. 2:12¼ and Forrest W. 2:14¼. W. C. Helman now owns Wayland W. and has fixed his service fee at \$40—a very reasonable figure for such a well bred race horse and producing sire.

A lot of high class mares will be bred to Star Pointer during the coming season. Every breeder that looks the ex-champion over is more than pleased with his appearance.

Don't fail to enter your foals in the Occident Stake of 1908, and to pay up on those entered in the same stakes of 1907 and 1906. It pays to keep a colt eligible to all stakes he is entered in.

A sale of trotters and pacers from Mr. A. B. Spreckels, Aptos Ranch, Santa Cruz county, will be held in this city sometime during February next. Sandy Smith is now getting them ready for the sale and undoubtedly has as fine a lot of young horses as can be seen on any farm in California. There are twenty-five head in all, by Dexter Prince and Cupid 2:18, the latter own brother to Sidney Dillon. A bay mare full sister to Venus H 2:11¼ is one of the choice ones. She is thoroughly broken and not afraid of anything; is a splendid roadster with speed enough to train for the track. One of the handsomest horses ever bred on the farm is by Dexter Prince out of Gallata by Stamboul. Gallata is the dam of Zambia 2:14¼, a fast trotter that took her record on one of the eastern tracks last year. Another that will be offered for sale is an own brother to Harold D. 2:11¼. He is three years old and just broken but shows lots of speed. A three year old by Dexter Prince out of Psyche 2:16¼, by Cupid is showing such a good gait, level head and so much speed that Sandy is already predicting great things for him. There are two Dexter Prince fillies out of the McKinney mare that produced the fast Cupid filly that Budd Doble has at San Jose, that are splendid prospects. All these young horses are being driven daily on the roads about Aptos where they meet steam cars, automobiles, electric cars and all other contrivances liable to frighten horses. When they are shipped to the sale Sandy will have them familiar with all these objects and they will be in shape to put to work on the road or track.

Zambia 2:14¼, the eight year old mare bred by Mr. A. B. Spreckels, sired by Cupid 2:18, own brother to Sidney Dillon, and out of Gallata by Stamboul, second dam Jenny, the dam of Hulda 2:08½, etc., by Bull Pup, is the dam of a two year old by Arlon 2:07¼ that is now owned by Charley Dean, the Illinois trainer, and is considered a great trotting prospect.

John W. Dunlop, a wealthy Boston man, recently spent a day in Portsmouth, N. H., with the trustees of the Frank Jones estate looking over the Maplewood Farm with the idea of buying. He wants the property for a summer home and to breed horses. The farm comprises upwards of 300 acres of the choicest farming land in that vicinity, and is equipped with stables, barns, greenhouses and a half-mile track. It became famous as the home of the noted campaigners that the late Frank Jones had on the circuit, including Eleata 2:08½, Idolita 2:09¼, Kingmond 2:09, etc.

Although the "Old Glory" sale was concluded less than four weeks ago, at which auction 1,000 head of trotters and pacers were disposed of, prospects for the Mid-Winter sale of the Fasig-Tipton Company look extremely bright. Fully half of the horses that the firm will be able to handle during the five days, January 29 to February 2, are already consigned. Walnut Hall Farm, Donerail, Ky., has consigned forty head of youngsters, mostly by the great sire Moko. It is the first consignment that that famous breeding establishment has ever sent to the New York market.

Manager H. 2:20, has been recently purchased by A. G. F. Stice of Brookfield, Mo., who also owns his sire, Manager 2:06. Manager H. is the champion yearling pacer of the world. He will be kept up during the winter and in the spring will be put in training with a view to lowering the world's record for two-year-old pacers which at the present time is held by Direct with a record of 2:07¼ made in 1894.

Every wound or sore on a horse should be washed daily with an antiseptic solution. If this is done the wound will heal quicker than if left alone and there will be no danger of the sore getting worse and finally causing the death of the animal. The best antiseptic solutions are made from the coal tar preparations—carbolic acid, etc. These may be mixed with water in the proportion of one to eight. If these are not handy borax used in the water or sprinkled on the wound immediately after washing it is a good antiseptic.

During the season Prince Alert was sent against the watch. His appearance created much excitement. He is the first pacer to appear on Austrian tracks and his performance may encourage Europeans to take up the side-wheelers. Prince Alert's wonderful flight of speed astonished the spectators, particularly when, on September 10, he paced a full mile in 2:07 5-10. It was difficult to secure a pacer-maker for Prince Alert, and he was greatly handicapped in his speed trials.

Sixty-seven of the new 2:30 performers of 1905 were sired by sons of Electioneer. Twenty-one were sired by sons of Beautiful Bells.

J. T. Richards of Salt Lake, who owns the trotter Dr. Frasse 2:12½ has just purchased the eight-year-old gelding Sunbeam 2:12¼. Mr. Richards intends his new purchase to make a pole team with Dr. Frasse.

TROTTING, GAITING AND BALANCING.

Paper read before the members of the Chicago Veterinary Society by O. E. Dyson, M. D. C., Chief Inspector, Bureau of Animal Industry.

My object in presenting the subject of shoeing and incidentally that of gaiting and balancing fast trotters, pacers and ordinary road horses, is to remind the members of this association that an important branch of the profession has been neglected to such an extent in the past that the owner of a knee-knocking, forging, interfering or scalping horse seldom appeals to the veterinarian for assistance. Lucrative fees are thereby overlooked, and the horse, perhaps a prize, or at least a serviceable animal, is sacrificed, or, even worse, allowed to pass from good hands to a cheap owner, whose only object is to pound so much work out of every horse, regardless of the pain and torture endured. From a humanitarian standpoint the veterinarian should at least have a knowledge of the art of shoeing for the purpose of correcting or overcoming faulty gaits, rather than leaving the animal to the tender mercies of the blacksmith, who, nine times out of ten, is only interested to the extent of the price of shoeing.

The natural gaits of a horse are the walk, trot, pace and gallop. Without attempting to describe the acquired or saddle gaits, the running-walk, foxtrot, single-foot and canter may be referred to as accomplishments and the result of education.

Imperfections in the above-mentioned gaits are due to many natural causes, such as lack of education, faulty conformation or abnormalities and from acquired causes, such as improper temperament, excessive or non-development of certain voluntary muscles involved in the act of locomotion, or they may be due to ignorance of the owner or blacksmith as to the adaptability of the animal and the proper method of shoeing for the purpose intended.

While not posing as an authority on shoeing, I have as the result of my observation and experience during the past twenty years associated a few facts in regard to the development of speed, with the art of horse-shoeing, or what might more properly be termed the art of shoeing and the phenomena of speed development.

The first principles necessary to observe with the object of having a perfectly gaited horse, is to study the individual and associate such facts as regards conformation and general makeup, with his way of going as ordinarily shod, at a clip which is intended to be utilized. The next step to be considered, and the one which should govern the proper method of shoeing, is the horse's temperament. The horse should always be shod according to the dimensions of his mental caliber.

Shoeing cannot in all instances, however, be made a panacea for correcting faulty gaits of horses. Intelligent biting and driving must not be overlooked, especially if the animal is of a high-strung nervous temperament, and in some instances, owing to a lack of mental co-ordination, the desired result cannot be accomplished by either shoeing or biting. Resort must then be made to mechanical means, by use of hoppers.

Bits and checks may also be included among the mechanical means of gaiting and balancing horses, and frequently take the place of considerable weight which would otherwise be necessary to add to or take from the shoe, in order to accomplish the purpose.

A good driver should, through the agency of bit and rein, be able to transmit motor impulses originating in his own brain to the horse. A poor driver, on the other hand, is not only unable to transmit such impulse, but constantly interrupts the natural motor impulses originating in the brain of the horse, thereby frequently causing a good-gaited horse to become addicted to the habit of inco-ordination, with its attending results. You have all no doubt witnessed the disastrous results of placing a good-gaited horse in a poor driver's hands.

Interfering is probably the most constant source of annoyance. In front it is usually due to faulty conformation, involving the chest or forequarter. The thoroughbred type may be cited as confirmed interferers, geldings, owing to early castration, being particularly predisposed. With this type of a horse interfering is usually due directly to the fact that he is narrow chested, and good action is seldom associated with this type, as a large majority are stiff-kneed, owing to a lack of natural muscular development. Contrast the above type with that of a stag or stallion and note the difference in conformation, style and action.

Calf-kneed horses, unless heavy in the chest, with legs set well apart, are apt to be troublesome. The same may be said of horses with straight pasterns. Low headed and sluggish horses might also be placed in this class. Horses that toe out are notorious, and can invariably be placed in the interfering and knee-knocking type, with legs set well apart. Pacers seem to be particularly prone to this malformation, and a pair of knee-hoots must accompany every trotter or pacer that possesses a three-minute clip, if he stands toed out. In this connection it may be added that pigeon-toed horses never interfere or hit their knees.

Interfering behind is so common that no class or type of horse can be excepted, as the fault arises from causes too numerous to mention. First of all, narrow, drooping-hipped, low-going trotters are the worst offenders. On the contrary, pacers seldom if ever interfere, except in walking or going slow. Green horses are apt to interfere during the first six months of their city life, as it requires at least a period of that length to overcome such predisposing causes as walking in a narrow furrow during the early spring work on the farm, and later in the season perhaps doing more or less travel over country roads, where a wide-gaited horse finds it very tiresome to cover a

distance of a few miles with one foot in a rut and the other upon a ridge.

In substantiation of the theories expressed regarding the farm horse, it may be said that trotting-bred colts, notwithstanding manifest predisposition owing to conformation, seldom interfere after a season's work at the track, owing entirely to a uniform development of their muscular system, and an intelligent method of shoeing with an object of overcoming such defects, whether natural or acquired.

Knee-knockers may ordinarily be placed in two distinct classes. First the high-going horse that toes out, and second, the low-going, narrow-chested trotter or pacer with speed. Beware of the latter, as he will also, in all probability, interfere when going slow.

Forging, scalping and shin-hitting are the direct causes of hitching behind, and can usually be associated with trotters, owing to their inability to properly extend themselves in front. This condition applies particularly to a class of horses with extensor flexor muscles equally developed behind, and comparatively high, full action, a straight or otherwise, in contrast to a dwelling, forward movement or turning of the fore feet, complicated by a lateral twisting or turning of the foot, or leg, either in or out, due to nondevelopment of the extensor muscles of the anterior limb. Line-pacers will frequently brush their hind coronet hard enough to cause them to hitch or roll in their efforts to avoid the contact, which seriously interferes with the development of speed.

Horses that carry a high head on account of tender mouths are frequently addicted to the habit of interfering with the coronary band behind, owing to the fact that their attention is concentrated on the mouth. Here it is plain to be seen that the reflex motor impulses in excess cause a high free action in front at the expense of their hind action. When proper biting fails in such cases it is often necessary to use a shoe much heavier behind than in front, in order to overcome or counterbalance the reflected motor impulses. On the other hand pullers and luggers are frequently the result of a lack of requisite amount of weight in the front shoes or an excessive weight in the hind shoes necessary to balance the brain.

Hitting the elbows is due to overdevelopment of the flexor muscles and in order to overcome the fault it has been found necessary to develop the extensors by use of toe-weights. In many instances, however, it will be found necessary to let the heels grow high in order to lessen the tension upon the flexor muscles. This will to some extent retard flexion until momentum has carried the body past the center of gravity or the point where flexion ceases and extension begins. That is, the object should be to intercept the act of flexion before it is completed and hasten the act of extension. In case the offender has long toes it may be necessary to shorten them or to add a small toe-calk to the shoe, which in many instances will suffice without the addition of toe-weights.

Anticipating the question, "How is a person to know when the horse is properly gaited and balanced?" I can only answer by saying that it depends entirely upon the judgment of the driver, or the person superintending the shoeing. Mention might be made of a few cardinal points, however. For instance, any man, unless he be devoid of sensation, may observe when a horse driven on a level road gives him the sensation of driving on a down grade that horse needs a weight to develop his extension in front. On the other hand, should he seem to be ascending or climbing a grade, the reverse is true, and the remedy would be to lessen the weight in front and increase it behind. You should always be able to drive a well balanced horse without a check, and not experience the sensations mentioned.

The wonderful speed attained by trotters and pacers during the past few years has, without question, been solely due to the development of brain and nerve, of which an inherited trotting or pacing instinct is a result in the progeny of developed sires and dams. In proof of this fact reference might be made to the thoroughbred, whose development by contrast would seem insignificant, and may be accounted for by the fact that the same system of shoeing and training now in vogue was in use twenty years ago, brain and nerve development having been almost wholly confined to the jockey and trainer and the natural results of heredity.

A normally developed brain and nervous system will invariably reflect the physical condition. On the other hand, the physical condition will reflect an abnormality. Most of the world's records in tests of speed and endurance are held by stallions, by mere force of predominating will power. "Conditioning the brain" should therefore be used in lieu of the familiar term "legging him up," as expressed by horsemen when preparing a horse to carry his speed and go the route.

In shoeing horses to obviate or overcome a faulty conformation or gait it must be remembered that in the beginning of the stride the foot leaves the ground from the point farthest from the median line or center of gravity, and the greatest muscular efforts in flexing the limb from that point are confined to the muscles farthest removed. For example—in a horse that toes out the abductor muscles that assist in the act of flexion are highly developed in comparison with the abductors involved in the act. Consequently the foot, during its elevation, is in such a position as to cause it to describe the arc of a circle during the act of extension, thereby bringing it in contact with the ankle, shin or knee, depending of course upon the height of the flexion. The same is true with a pigeon-toed horse, except that the arc of the circle described is that of abduction, consequently there is never any interference with the opposite member. In either case, however, there is apt to be considerable interference with the forward movement of the hind foot or leg while partly extended, and at that time the act of forging, shin-hitting, scalping or grabbing the quarter occurs with trotters. With pacers only the act of

abduction of the forefoot causes any interference with the forward movement of the opposite hind foot, the usual result of which is grabbing the quarter or brushing the hind coronet.

It would be impossible to form set rules for shoeing in order to overcome defects in gait, either natural, owing to conformation, predisposition and temperament, or acquired, as heretofore mentioned. A safe rule to follow, however, is to ascertain the cause and overcome it by mental balance or physical development.

In this connection I have no hesitancy in saying that too much attention has been given to the foot and apparently no notice taken by the average horse owner or blacksmith of the fact that a horse is possessed of a brain, which controls all voluntary movements, and that too much emphasis cannot be placed upon the fact that the highest nerve centers have been in the ordinary process of mechanical shoeing, habitually subordinated to inferior, or pedal extremities.

A term which fully expressed my theory of horse shoeing is "Shoe for the purpose of balancing the brain," or in other words, for the purpose of physical development, the establishment and maintenance of perfect co-ordination between the brain and voluntary muscular system involved in the development of a natural or acquired gait, rather than a purely mechanical standpoint. When you have succeeded in doing this you may depend upon the rest of the animal economy to work in unison, and rapid progress can then be made in the development of an ideal road horse or of prospective speed. It might be well, however, to mention the use of hoppers as the only successful mechanical means of overcoming inco-ordination of motor impulses in trotters or pacers, when physical and functional development fails. But in proof of the fact that physical and mental development go hand in hand, note the scarcity of hopped trotters today in comparison with a few years ago, when the system of development and training was simply mechanical.

Motor impulses are always the result of stimuli originating by direct or reflex action upon the sensory nerves, and transmitted to the brain for the purpose of elaboration and direction. Thus we find that voluntary muscles to which motor impulses are directed in excess of other muscles, develop accordingly, or according to their use or disuse. As mental and physical development in all instances is directly responsible for the perfection of the gait of a sound horse, and being directly subject to the will of man, through education, it is plain to be seen that the effect of increasing or diminishing the weight in the shoe, or changing the angle of the foot, and consequently the position of the limb, will be communicated to the brain and transformed into motor impulses, and the desired effect, that of development of the muscles necessary to overcome the original defect, will be accomplished.

The greatest difficulty encountered in shoeing horses for the purpose of gaiting or balancing is to be able to convince the owner that instantaneous results cannot be accomplished. It is impossible to immediately overcome excessive or non-development, either physical or functional, by merely changing the angle of the foot, the weight or the shape of the shoes.

The following are a few of the common points to be observed before attempting to direct the shoeing of a horse to prevent interfering, or to overcome a faulty gait:

First note the general conformation and posture of the feet and legs with reference to their anatomical relations, while standing in a natural position. By standing in front of the animal and drawing an imaginary line from the upper portion of the legs to the point of the toe, any abnormality such as toeing out or in can be readily discerned.

Change your position and note the pastern with reference to its straightness or obliquity. A slight springing or tendency toward being calf-kneed may also be noted at this time.

Pick up each foot and carefully note how each shoe has been worn, their approximate weight and length of service, and make a careful inquiry of the driver as regards the horse's disposition and driving qualities. Also observe the kind of bit and check used.

Then have the horse driven over a smooth pavement, directly in front of you for a short distance and returned in the same manner, at a clip ordinarily required or generally utilized. From this position it is easy to note the carriage of the foot or limb during the progress of the stride. After viewing the horse from this position, both at rest and in motion, step back a few paces, have him driven past you several times in order that you may carefully note the height of flexion and the act of extension, either of which may be primary cause of interference or faulty gait, and possibly as easily remedied as seen.

During this exercise every movement of the animal must be noted, and especially that of the offending foot or limb, as regards its relations to the rest of the animal economy.

The Don'ts.

Never examine a harness horse to halter, or one kept for saddling purposes in harness.

Don't pass final judgment on a high spirited horse fresh from the stable, or one thoroughly tired out.

Don't fall to size up the owner or driver and draw your own deduction from their statements, substantiated by your own observations of the horse.

The well-known Ohio reinsman Dave Rayburn, who was years with the Rowe Stock Farm at Dayton, has left Montana and assumed the position of superintendent of the Ketcham Stock Farm at Toledo, Supt. King, late of the Ketcham Farm, is now with Mr. Redmond of New Jersey.

Sober up on Jackson's Napa Soda.

LOS ANGELES DRIVING CLUB.

Close finishes, extra heats to decide three of the events of the day and a good Christmas crowd were the features of the matinee of the Los Angeles Driving Club at Agricultural Park Christmas day. The gate at the matinee was free. From the point of view of the horseman the 2:15 pace, in which H. N. Henderson's Henry N. won from Dr. Dodge's Lohengrin, was the feature of the day.

In the 2:20 pace the finishes were fought to the last stride. The first heat went to B. H. Smith's Harry H. Pounder took Connors out in the lead in the first half, and was due to win in a good finish when the animal broke and before he could be landed on four feet Smith went to the front and stayed there.

In the second heat Connors, Gladys M. and Harry H. fought all the way to the flag. There Connors went to the front under the whip and finished handily.

The third heat was a repetition of the second, except that the whip was omitted. Connors went with the bunch to the flag and romped in.

Secretary Bruner gave up his megaphone and bell in order to drive Electric Maiden in the fourth event. He made good in sensational style. The first time out the animal broke at the gate, and after falling back ten lengths was lifted to the front in a bit of the best driving shown on the track this year.

General Boodle, driven by Godfrey Fritz, came in winner in the last two heats in the 2:40 trot. W. M. Raynard won the first heat.

Ida Millerton won the 2:25 trot after being hard pressed in both heats by Zombretta. In the second heat good driving and a burst of speed turned the trick.

Dickey Doyle won the first heat of the 2:30 pace, but was unable to repeat the performance, and Seigfried took the money. The summary:

First race, 2:30 pace—
Siegfried, b. g.(Long) 3 1 1
Dickey Doyle, blk. g.(Dr. Hagan) 1 2 3
Laura G., b. m.(Pierce) 2 3 2
Time—2:33½, 2:26½, 2:26.

Second race, 2:40 trot—
Gen. Boodle, blk. g.(Fritz) 2 1 1
Billy, b. g.(Raynard) 1 2 2
Time—2:33½, 2:26, 2:23.

Third race, 2:15 pace—
Henry N., gr. g.(Delorey) 1 1
Lohengrin, b. g.(Dodge) 2 2
Midnight, blk. g.(Bosbyshell) 4 3
Mistake, br. g.(Bransford) 3 4
Time—2:16½, 2:17¾.

Fourth race, 2:20 trot—
Electric Maiden, b. m.(Bruner) 1 1
Hank, b. g.(Mosher) 2 2
Burnut, b. g.(Delorey) 3 3
Time—2:16, 2:17.

Fifth race, 2:20 pace—
Connors, b. g.(Pounder) 3 1 1
Harry H., ch. g.(Smith) 1 3 3
Gladys M., ch. m.(Myers) 2 2 4
Zollie, blk. m.(Mosher) 4 4 2
Rendo, b. g.(Snowden) 5 5 5
Time—2:18, 2:22, 2:22.

Sixth race, 2:25 trot—
Ida Millerton, blk. m.(Delorey) 1 1
Zombretta, b. m.(Christopher) 2 2
George Anderson, b. g.(McGiffert) 3 3
Maggie McKinney, b. m.(Colyear) 4 4
Time—2:20, 2:22.

INTERCITY MATINEE.

One of the topics which came up for discussion at the recent annual meeting of the board of directors of the League of Amateur Driving Clubs was that of inter-city matinees. During the past two seasons any matinee club in membership with the league was allowed to hold an inter-city matinee, the racing to be conducted in accordance with the rules of the league.

The expense connected with holding a successful inter-city matinee is rather heavy, as is the shipping of the horses from city to city. The members of the various clubs are business and professional men who often times are prevented from attending these meetings because of their business duties.

It is very likely that but one regular inter-city meeting will be held next season, and that will be at Pittsburg. Doctor Strong having won the Cleveland Gold Challenge Cup at the Chicago matinee for the Pittsburg Club, the latter organization will give a two-day inter-city amateur meeting in 1906 to decide the next winner of the handsome trophy, which represents the amateur trotting championship of the world.

The Pittsburg Club also contemplates offering a valuable cup for horses eligible to the 2:10 or 2:12 class, and the contest for such a trophy is certain to be an interesting one. As the Gold Cup contest is open to all trotters, irrespective of their records, it means that only the very fastest and highest class animals eligible to this event have any chance of being returned the winner, resulting in small fields and often times depriving the race of all interest. This was illustrated during the past season, when Mr. Billings declined to start either Lou Dillon or Major Delmar for the Gold Cup, in order to assure a larger and better balanced field.

Gatcomb's case against the Cleveland Association for declaring off its meeting last summer goes over until the May meeting of the Board of Review.

Mr. C. L. Jones' colt Carloklin 2:20¾ by McKinney, has worked a mile this year in 2:16¾ for Will Duffee at Los Angeles.

THE INFLUENCE OF AGE.

At what age will a sire or dam produce their best progeny?

In this form the question has been discussed by many of the ablest biologists of America and Europe. Some contend that the best results are had from young sires and dams. They can give a plausible theory why this should be so and back it up with statistics. Those who believe in the virtues of the middle aged sires and dams make out an equally good case, while those who hold that the best progeny may be expected from aged sires and dams can prove their case by the records. Indeed if a man will search the records for a theory he can find a new one as often as he likes.

The question in its popular form is not what it appears to be and if it be studied in that shape a satisfactory conclusion it not likely to be reached.

What the breeder really wishes to know first is this. What the influences of young sires and dams? Wherein do they differ from the influences of middle aged or aged sires and dams?

When he solves that problem satisfactory he will have something of value on which to base an opinion.

He will then find that the term "best" is comparative. That what is "best" in one instance is not "best" in another. Or in other words, he will find that "best" results may be expected by breeding certain young animals together. In other cases "best" results will be reached by crossing certain young and old animals, or by breeding mature or aged animals together.

If there is any difference, that is any general difference in the progeny of young or aged animals, we must find out what that difference is before we can decide which is "best" and which is not "best," and as indicated already we will find that the influences of parental age on the progeny are desirable or undesirable according to other conditions.

If there is anything at all in the doctrine of heredity it is certain that a young animal will be more potent in the peculiar qualities of youth, such as enthusiasm, energy, dash, brilliancy and all their relative qualities. The young, highly bred animal is full of fire and vim and the natural energies of youth. They may not be thoroughly developed but they are there. The young animal has a developing nature, a tendency to investigate, and a physical and psychical quickness that is wanting in mature or aged animals. All these he will transmit. Of course they will not be lacking entirely in the progeny of mature or aged animals. But they are more likely to be transmitted in their most intense form by the young.

There are also "follicles of youth" that are more likely to show themselves in the progeny of the young. The young animal has faulty habits that are cured or wear away before he becomes aged. His progeny will have a tendency toward the same faults, and no matter how slight that tendency may be, it is present nevertheless and continued breeding in that line would seem to fix those instinctive habits.

On the other hand wisdom comes with age. Animals learn by experience. They develop under culture, and the old dog or old horse knows the work for which he is bred better than the young one. His instincts have been developed, and he does easily the things that the young animal wastes a lot of energy over. This developed quality that comes only from long experience and culture is transmissible by heredity. But these are the infirmities of age. And these, or a tendency in their direction is also transmissible by heredity.

It will readily be seen that there are desirable and undesirable characteristics to be expected as a result of continuous breeding from young animals, just as there are desirable and undesirable characteristics to be expected as a result of persistent breeding from aged animals. There is no truly responsive answer, therefore, to the question as to which of the two, young or old is the best to breed from.

The practical application of the laws of heredity as regards young and old animals is a test of the breeder's skill. Certain strains of good blood that show sluggishness would be helped by breeding to young, well developed animals. While other strains that were disposed to an undesirable degree of nervousness would be helped by breeding to aged animals which are still vigorous. There are strains of horses and dogs which are slow to develop. They have all of the instincts of their breed, but they do not operate easily or with sufficient precision. A dash of aged blood would seem to correct this. So too aged blood would benefit a strain that was not quite level headed. It is all a matter of judgment with the breeder. The man who is skilful will know the strong and weak points of his own strain and the strains he wishes to use for crosses. The question of suitable age is only one of the many questions to be considered in making crosses, and like all other breeding problems it must be understood before it can be turned to practical account.

Perhaps the most plausible arguments offered on the age problem are those put forth in behalf of aged sires. The records will show that the famous trotting and race horse sires have more speed to their credit through the progeny of their days past maturity than before. Noted setter and pointer sires have got more good progeny late in life than in their younger days. But there is good reason for that, apart from any special merits in the produce of old age. A trotting stallion, for example, is not likely to be well developed before maturity. Then if he shows individual excellence besides having a good pedigree he is bred too. In his younger days he is simply a well-bred horse and is used but little on good mares. When he shows

his own worth by performance he gets but moderate patronage, for breeders are chary about using a sire until he has proven himself a producer of quality. By the time he has been developed and used enough to have developed progeny of merit, he is past middle age. That is the period at which he becomes known as a well-bred animal of individual excellence which he transmits. As he grows older he has a larger number of get and becomes more and more popular. So that it is the rule that sires have their greatest opportunities after they have passed the meridian of life, and naturally they have a larger number of better progeny at that period than they have earlier in life. The well bred setter or pointer is not likely to get into the championship field trial class until he is four years old, and at that time he may expect to be used on well-bred stock, likely to produce winners. But before this progeny can make much of a record to his credit he will be six or seven years old. He would be popular then with breeders and would have his best opportunity after that period of life. But when he shows his best form as a sire thus late in life it will not do to say that the progeny owed any of its merits because of an aged sire.

Of course the practice of breeding to immature animals, or animals that are tottering on the brink of the grave, are not to be considered seriously by any breeder at all familiar with the principles of breeding. What is here meant by young animals are those which are mature but still on the young side of middle life. The aged animals under consideration are those which have passed middle life but are yet sound. There is a difference between these two, both physical and psychical, and there is a difference in their powers of transmission. In general terms it may be said that each will be likely to reproduce itself if the breeder will persist in following one or the other line of breeding. The peculiarities of age as distinguished from youth will assert themselves if a continuous line of that kind of breeding is followed. The enthusiasm of youth and all its correlated characteristics will surely tend to assert themselves in a long line of breeding from young animals. Both the qualities of age and the qualities of youth can be impressed on the progeny by the skilful breeder. To cross these qualities is only another method of improving a breed.—C. B. Whitford in Chicago Horseman.

THE DAVIS SALE.

Following is a list of the horses sold at the sale held December 12th by Fred H. Chase & Co. of the horses belonging to Geo. A. Davis of Pleasanton.

Eva T. 2:18¾, b. m. by Almont Medium, dam by Alwood, to E. Blake for \$150.
Antea, b. m. by Anteeo, dam by Sultan, to G. T. Morris for \$105.

Mary Medium, blk. m. to Jerry Dineen for \$240.
Reina Direct, blk. m. my Rey Direct, dam by Adirondack, to E. A. Perley for \$120.

Belle McGregor, b. m. by Silver Bow, dam by Temp-est, to John Parrott for \$230.

Idlemay 2:27½, b. m. by Electioneer dam by Wild-ille, to J. Silva for \$65.

Sorrel filly by Hart Boswell, dam by McLellan, to H. Olsen for \$65.

Bay filly by Hart Boswell to F. Julian for \$65.
Bay filly by Hart Boswell to H. White for \$75.

Pair Shetlands with harness and surrey, to H. Siml for \$250.

Brown filly by Son of Diablo, dam by McLellan to H. White for \$55.

Brown filly by Son of Diablo to J. Kilpatrick for \$115.

Happy Hooligan gr. g. by Rey Direct, dam by Griffith's Arabian, to P. Isenburg for \$75.

Bay filly to J. Kilpatrick for \$115.

Happy Hooligan's Sister to P. Isenburg for \$75.

San Lucas Maid, by Dictatus, dam by Sidney to D. A. Ross for \$525.

Greyfeld, thoroughbred by Agra, to H. Ladd for \$75.

Eva Ray, b. f. by Rey Direct dam Eva T. by Almont Medium, to W. L. Heine for \$250.

Miss Kelly, blk. f. by Rey Direct, dam Anagita by Antrim, to E. A. Perley for \$205.

Del Valle Maid, gr. f. by Rey Direct, dam Sidlette by Sidney, to F. H. Jennings for \$400.

Reina Directum, blk. f. by Rey Direct, dam Stem-winder by Ventura, to F. H. Jermyn for \$550.

John Smith, b. c. by Son of Richard's Elector, to F. Hoffman for \$225.

Black filly, weanling by Directwell, dam by Le Grand to T. Murphy for \$90.

Sister Susie, b. m. by Directum, dam by Bell Alta, to J. Paulsen for \$75.

Lucero b. h. by Dietz's Wilkes, to V. Verhikac for \$300.

Lady Capet, b. m., to P. Isenburg for \$205.

Nancy Starr, ch. f. by Mendocino, to D. C. Thompson for \$185.

Consigned by Chas. De Ryder.

Sid Abbott, b. g. by Sidmore, to P. Isenburg for \$525.

Crescent, b. m., to P. Isenburg, for \$500.

THE INDIANAPOLIS SALE.

As will be noticed by the advertisement in this week's issue, the date of the big sale at Indianapolis has been postponed from March 1st, 2d and 3d to March 26th to 31st. The Blair-Baker Horse Company, of which Frank P. Kenney is the sales manager, are expecting this to be one of the greatest sales of the new year, and reports the demand for good horses as very strong. Indianapolis is a splendid point to dispose of high class roadsters or track horses and California breeders who contemplate selling in the Eastern market should open correspondence with Mr. Kenney.

THOROUGHBRED DEPARTMENT.

By RALPH H. FOZER.

Lubin, from the W. W. Elliott stable, won the Christmas Handicap with 107 pounds up by five lengths from Proper in the fast time of 2:06, and with a lot up the proverbial sleeve. This is his first victory since the Thanksgiving Handicap, which was worth \$2,270, and in which he downed Proper and Bearcatcher. As the Christmas Handicap was of a value of \$3,195 to the owner of the winner, Lubin is the heaviest-winning horse at the meeting thus far. Considering that he was beaten by over six lengths by Nera Lee at a mile on December 20th, both carrying 105 pounds, and by over five lengths by Callaghan December 13th at one and a sixteenth miles, Callaghan carrying 114 pounds to the Elliott horse's 106, there is little wonder over the bookmakers laying 10 to 1 last Monday, and the improvement was so sudden and startling that it looks like a mystery for the stewards to solve. Certainly the performance between the Thanksgiving and Christmas Handicaps gave little indication that Lubin was a pound better than Proper, which he proved yesterday, counting three pounds to a length and three pounds in addition for the easy style in which the Lazzarone gelding won. In other words, he gave Proper an eighteen pound beating, at the least, and add eighteen to 107, and he should at the next essay be asked to carry 125 pounds to Proper's 124. Dr. Leggo ran an impressive race in the Christmas Handicap, considering it was his first start in several months. Carrying 115 pounds, Proper beat him a neck for the place, in a hard drive, with the Doctor gaining on Jennings' horse. Callaghan showed that he is just a fast miler, for the way in which he "backed up" after going the eight furlongs was "bad medicine" for the many friends of Mr. Nealon and his flyer.

Christine A. made Hugh McGowan look very common in the fifth race Christmas, and is a vastly improved mare. The play on McGowan was very strong, and his race was in keeping with the play. The question naturally arises to race-goers, why this great improvement in the horse in forty-eight hours' time, even if Sandy did ride him Saturday and Knapp on Monday? On Saturday the gelding carried 93 pounds and ran his mile in about 1:43½, on Monday with twelve pounds more up, in about 1:42 9-10. This sort of running does more to injure "the game" than any other, seeing a horse go back in the betting on a Saturday with light weight up and on a Monday, with much more weight on, hundreds of dollars go in on its chances and you observe him run at least a fifteen pound better race than he did previously.

Bearcatcher's handy length win at Ascot Park last Saturday in the \$2,500 special at six furlongs adds another leaf to the heavy crown of laurels that encircled his brown neck. Handzarra, admittedly interfered with a furlong out by Cruzados, was second, with Cruzados at her saddle-skirts, and the time was 1:13. "The Bear" ran the last quarter in 0:22¾, a feat he is capable of performing any time he is fit and well. Garnett Ferguson, one of the most popular owners in California, had enough confidence in his horse to wager \$5,000 on him at 4 to 5, and Bearcatcher went to the post at 7 to 10, Handzarra at 2½ to 1 and Cruzados 4. Bearcatcher has now more extremely fast performances to his credit from half a mile to a mile and a furlong than any horse living or dead. This sounds big, but the records will bear me out in the assertion, and I believe that Bearcatcher will retire to the stud the acknowledged American champion race horse.

LONDON, December 21.—King Edward has sold for \$150,000 his triple event winner, Diamond Jubilee, by St. Simon, out of Perdita II, to the Argentine Republic breeder, Senor Ignacio Correias. Diamond Jubilee won the 2,000 guineas, the Derby, the Eclipse stakes and the St. Leger of 1900. He is a full brother of Per-simmons, also the Derby and St. Leger winner in 1896. He is also a full brother to Florizel, the sire of Vedas, Volodyovski and Doricles, which between them have won the 2,000 guineas, the Derby and St. Leger. The horse is to fill his season in England and to be delivered to his new owner in July.

Only Flying Fox (\$187,500) has exceeded the price paid for Diamond Jubilee, and it ties the sum given by W. O'B. Macdonough to an Argentine breeder for Ormonde. Kendal, sire of Galtee More, is now in the Argentine Republic, and his stock are reported as the best lookers in that land. Kendal is quite a traveler himself, being once if memory serves, in Italy, taken back to England, thence to Ireland, and now to the far-off South American republic.

At the Rancho del Paso sale at Chase's sale yard on the evening of December 21st, moderate prices prevailed, many yearlings selling for from \$100 to \$250. The top price of the sale was the bay colt imported Goldfinch-Miss Modred, Walter Dean securing him for \$1,000. A. Joseph paid \$475 for a chestnut filly by Maxio-Revulsia, by Fresno, W. Jennings got the Watercress-The Dome filly for \$250. W. Dean secured a bay colt by Maxio-Blithesome for \$400. J. B. Leighton purchased several yearlings, presumably for the Sobra-Vista stable.

The apprentice allowance is just now under discussion in turf circles all over the country. Without this allowance, which is a proper encouragement to boys learning to be jockeys, we would probably have seen no Hildebrand, Knapp, Radtke, Miller, McDaniel, Wiley or McBride, famous as saddle artists at this time, and there are many other good though not celebrated riders out this way that would not have been heard from had the apprentice rule not been in vogue. I believe the business of becoming a jockey should be just like learning any trade. It takes time, and I

would suggest that a boy be apprenticed for three years as an apprentice and be entitled to the following allowances: The first year of his apprenticeship, six pounds; second year, four pounds; third year, two pounds. If he is apt and learns the art quickly, so much better for his employers, and I believe there should be first, second and third calls registered on an apprentice, just as on a "journeyman" jockey, and that these employers be the only ones entitled to the above apprentice allowance. With three years' experience a boy should make a thorough race rider, and under this plan the full-fledged riders would not be supplanted by the apprentices (many of whom have not been riding for more than a year). Then if the Racing Secretaries should get together and agree to make the "below-the-scale" races fewer and further between in their programs, and we would see the heavier riders having a chance to remain in the business much longer and become more proficient than they are at the present, for Secretaries undoubtedly cater too much to the owners of horses that do not like weight.

At last the famous Morris Park race track property at Westchester, N. Y., has been sold to a syndicate of real estate men and will be cut up into building lots. The rumor that the track was to be sold for residential purposes has been going the rounds of the metropolitan turfdom for many years, but the Westchester Racing Association had a hard and fast lease and it was not until the completion of the Belmont course on Long Island that racing was finally abandoned at Morris Park. Four years of the lease are yet to run and it is understood that the purchasing syndicate has made arrangements to take it the hands of the association. The property is in the Bronx, adjoins Van Ness Park, comprises 300 acres and belonged to the Morris family. The price is said to have been around two and one-half million dollars.

ABOUT HANDICAPPING.

Among the winter's curiosities of turf literature is this from a writer for the New York Telegraph:

It is gratifying to notice that the question of handicap racing on trotting tracks is receiving more serious attention. In the past all suggestions to this effect have been only ridiculed, but so many improvements have been introduced on the harness turf lately, and they have been so readily accepted by horsemen and track managers, that the advocates of the handicapping system have taken renewed courage.

Another reason why the matter is being agitated now is because it has been tried over the trotting tracks of Europe with satisfactory results, and is now in general vogue.

Many experienced trotting horse men believe that through this system alone long scoring, perhaps the greatest drawback of harness racing, could be done away with. Trotting horses could be handicapped in distance according to their records just as readily as runners are in weight, and by a standing start scoring can be entirely avoided.

How much ground a horse covers at certain gait has already been calculated by mathematical precision, and it will be a very easy matter to handicap horses with a record difference of three seconds, and, more or less, placing them at different distances according to their records, the slowest under the wire and the fastest ones as far back as their previous marks will handicap them.

The system should first of all appeal to track managers, for more than one reason. By allowing horses of different records to compete in the same class there will be no lack of entries; in fact, they will perhaps be larger than can be taken care of when the start is made. In the second place the system will surely prove acceptable to the race-going public and increase the gate receipts to a noticeable degree.

The advantages of the system are undoubtedly more in favor of owners and drivers than track managers. The horse with a record of, say 2:23¾, will be given an opportunity to start in a field which includes horses with records of 2:20 and often faster on equal terms. There will be no danger of outclassing horses as fast as they are liable under the present method. Besides there will be no reason why every horse should not be driven to its limit in every heat of the race.

The only difficulty for the trainers, if it be at all a hardship, is that horses should be trained and educated for a standing start, that is to get away quickly. Any horse could be trained to it just as easily as they are on the continent, and surely much better.

Educated to a standing start, horses will not waste their strength and energy in scoring, and can be raced more heats and entered in more races. They will last longer.

The main objection to the system is the fact that the field of starters will be strung along part of the distance, but then what a difference between the stringing up soon after the start, as most of the heats are now, and being so at the start? There is no reason to believe that the finishes will not be just as close and exciting as they are now. And the most interesting part of a harness race is the finish.

Many contend that by the handicap system may not have as many fast performers at the end of each season as we do now. Whether there is any truth in this remains to be found after the system has been tried. Even granting that such will prove to be, yet the question is, what is the advantage of having 105 2:10 trotters and pacers at the close of every racing season? What is the advantage to the harness turf because some of the best performers are out-classed every year, and practically lost to the horse-loving public? Some enterprising track manager should give the system a proper trial, which may prove a blessing to harness racing.

NEWS FROM THE NORTH.

(Christmas Rural Spirit.)

T. L. Davidson, Jr., who bought a half interest in Hal D. from Homer Davenport, has arranged to keep him in the stud at Salem, Oregon, next year.

The prospects for a successful racing season on the North Pacific Circuit next year looks very flattering. Salem will lead out with the richest program ever offered on the circuit which will draw horses from all sections. Let other associations follow up with liberal purses and guarantee two harness events each day and success is assured.

John Lance writes from Walla Walla that he had to put to death his old favorite Sam Bowers, on account of a broken leg caused by a kick from another horse. Sam Bowers was one of the best known horses on the Northern Circuit. He had a pacing record of 2:11, and a trotting record of 2:19½, which he made this year. He has started 48 times, won 21 races and only outside of the money eight times. The loss will be heavy on Mr. Lance, as he was considered a money winner in his class.

Fruitdale Stock Farm in Clackamas county, Ore., owned by Aug. Erickson, owner of the great pacing stallion, Hal B. 2:04¾, is the home of some very choice brood mares. Dictatress 2:08¾; Altacora 2:13, by Altamont (sire of the great brood mare Tecora), Altalena, by Altamont, Vevo by Altamont, Bhima by McKinney 2:11¼. Mr. Erickson owns youngsters out of these mares sired by such noted sires as Diablo 2:09¼, Searchlight 2:03¼, Joe Patchen 2:01¼.

J. A. Jones, owner of the McKinney stallion, Capt. Jones, is preparing to take a few two-year-olds to California to be trained for the big futurities there next year in which they are entered. Mr. Jones has on his Upland Farm in Yamhill county some very richly bred brood mares, one of which is the dam of last year's futurity winner and one of the colts going down is out of the same mare, Daisy Q. Hill, by Altamont. He also owns Amy May, by Alexis 2:18 (sire of the good pacer, Vinnie Mann 2:11¾), dam Beulah, full sister to Cheballis 2:04¼, Del Norte 2:08, etc., Lady Beach 2:26, by Altamont, dam Hollywood (dam of Altawood 2:20, McMinnville Maid 2:22), by Hambletonian Mambrino; Maggie's Caution, by Caution, 2:25½, dam Maggie Arnold (dam of Altago, sire of four), by Almont Mambrino, second dam Alice Drake (dam of 4), by Norman 25.

Frank Trott writes from Boston as follows: "The late sale in New York was in many respects the most remarkable ever held. It was a record-breaker as regards the number of horses sold, some 1014 changing owners. The average price, \$418, was not as high as a year ago, but the offerings were not nearly the equal of those disposed of in 1904. The sale right through contained very few animals of demonstrated high class. Before the sale it was believed that there was only an ordinary demand for anything not strictly high grade, but as the bidding was lively for all kinds, it demonstrated that there is a desire for commonplace stock if nothing better is offered. The horses sent from New England sold almost without exception for much more than the consignors had set them at. Not as many horses were bought by New Englanders as usual, but the quality was away ahead of anything in the past, a most healthy sign. There never has been a time when horsemen hereabouts have been so keen after racing material as this fall, and from present indications more New England horses will be campaigned in 1906 than ever before. Every trainer one meets has a commission to buy a good horse. Some are limited in price, but the majority of them appear to have an unlimited order."

A corporation representing the best business men of Washington C. H., Ohio, are building an enormous combination horse sale pavilion in that city. It is to be 600 feet long and 100 feet wide, with a speedway thirty feet wide through the center of the entire building, to be equipped with all modern conveniences, and will accommodate 500 head of horses in large, well ventilated stalls. Encircling the sale ring is an amphitheater seating 1000 people. From the present outlook the management expects to have many high class horses in their inaugural sale. Washington is located in the center of a good breeding country. Charles Willard, who has had several years' experience in the combination sale business, will be general manager.

People who have a fancy for close crosses of thoroughbred blood in trotting pedigrees will be interested in knowing that Lady May, a daughter of the old true running horse, Port Leonard, who used to perform over the old Dexter Park track along in the '70s, now is the dam of seven standard performers at the trot and pace. All of them are by the Texas stallion Electrite, son of Electioneer and brother to Sphinx and Egolust. The fastest of the produce of Lady May is the trotter Blondie 2:13¾.

A peculiar case is reported from Fall River, Mass. Samuel Hyde of that place has two yearlings out of the same mare. The mare is Whisper 2:08¾, and one of the youngsters is by Direct 2:05½, and the other by Baron Dillon 2:12. The older of the two colts was foaled early in January, 1904, and the younger on the last day of December of the same year, the one being nearly twelve months and the other a few hours old when the rules declared them both one year old.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

THE INTERSTATE ASSOCIATION'S ANNUAL MEETING.

The annual meeting of the stockholders of the Interstate Association was held at Oakland, Bergen county, N. J., on December 14, 1905, at 10 o'clock a. m. The meeting was duly adjourned to meet the same date at 1:30 p. m. at the Grand Hotel, New York City.

The adjourned annual meeting was called to order at 2 p. m., with President Irby Bennett in the chair.

The roll-call showed the following members present: Tatham & Bros., by Charles Tatham; Union Metallic Cartridge Company, by A. C. Barrell; Winchester Repeating Arms Company, by Irby Bennett; Parker Brothers, by W. F. Parker; E. I. Du Pont Company, by J. T. Skelly; Ladlin & Rand Powder Company, by A. W. Higgins; Marlin Fire Arms Company, by J. Howard Marlin; Hunter Arms Company, by John Hunter; Peters Cartridge Company, by T. H. Keller; Hoyt Metal Company, by W. P. Markle; Chamberlin Cartridge & Target Company, by Paul North, and the Lefever Arms Company, by A. H. Durston. The Remington Arms Company was represented by A. C. Barrell by proxy. B. Waters of Forest and Stream, W. K. Park of Sporting Life, John Taylor Humphrey of Shooting and Fishing and Capt. A. W. Money, honorary members of the association, were also present, as was Elmer E. Shaner, secretary-manager of the association. J. A. Haskell, president of the Ladlin & Rand Powder Company, L. C. Parker of Parker Brothers and W. Fred Quimby of the E. I. Du Pont Company were present by invitation.

The minutes of the meeting held February 10, 1905, were read and approved. Mr. A. W. Higgins, treasurer, presented his report for the year ending this date. The report showed that the association was in good financial standing. The report was received, approved and filed, and a vote of thanks tendered Mr. Higgins. The secretary-manager's report was read and, upon motion, was received and filed, and a vote of thanks tendered Mr. Shaner for his careful review of the year's work.

Mr. Shaner's report was as follows:

Pittsburg, Pa., Dec. 4, 1905.

To the President, Officers and Members of the Interstate Association.

Gentlemen: There is a strong temptation while writing these annual reports to begin with the salutatory of the old-time clown in a circus—"Here we are again, master"—and let it go at that. The task is very monotonous. An unbroken record of success, cumulative, while eminently gratifying to the writer, is not stimulative to the imagination.

Another unfading season of success suggests again the reflection that trap shooting is one of the few eminently clean sports left to the true sportsman. Here the degeneracy caused by gambling never disgusts nor demoralizes the real sportsman. Pride in skill and the ambition of fresh blood deprive the gambler of a chance for manipulation, and the history of the Interstate Association is a guarantee of a fair field and no favors.

While trap shooting is dormant in a few particular localities, the records of this office and the best information obtainable from the manufacturers of sportsmen's supplies show there is more trap shooting now than ever before, and interest will continue to accumulate just so long as the sport is controlled on the present equitable lines. The guidance and influence of such an organization as the Interstate Association is imperatively, not to say absolutely, necessary to keep the sport at its present high standard.

The opening tournament for 1905 was held in Augusta, Ga., April 5 and 6, under the fostering care of the Augusta Gun Club. Notwithstanding the latitude, the weather was decidedly unpropitious, and the contrast of flowers of April with overcoats suggestive of Alaska was one of the prominent features. In spite of fierce northwest gales, cold rain, hail and general discomfort, the attendance of both contestants and spectators was good. No foresight could flank "Old Prob," and though the association's outfit was demoralized, stoicism not only overcame circumstances, but there was a cheerful acquiescence in the inevitable.

The second tournament of the series was held in Hopkinsville, Ky., April 26 and 27. A high wind left over from the Augusta tournament had moved north, but though it hurt the scores it was more endurable than the Georgia variety. The attendance was not up to expectations, and no one was able to give a reason, as the Hopkinsville Gun Club, though but three years old, is up to date, its membership large and enthusiastic, and it enjoys a full measure of popularity.

And it was windy weather at Owensboro, Ky., on May 17 and 18, but the Daviess County Gun Club's arrangements made the meet interesting nevertheless. Though the attendance was but medium, interest was well sustained and the best of humor prevailed.

The sixth Grand American Handicap at Indianapolis, under the auspices of the Indianapolis Gun Club, June 27 to 30, showed conclusively what the Interstate Association has accomplished in teaching not only the young, but also the adult, idea, "how to shoot," the entries having grown almost 400 per cent since the year, 1900, when the event was inaugurated. This year's event was signalized by an extraordinary number of entries, showing not only a

local but also a national interest by the large number of averages exceeding the 90 per cent mark, the large and fashionable attendance of spectators, the unprecedented number of targets thrown and the smoothness that characterized the work from beginning to end, as well as the good humor which prevailed. All in all, it was a record-breaking event, and the hearty co-operation of the Indianapolis Gun Club was not the least meritorious adjunct.

Strenuous work was, of course, necessary to get the thing through successfully, but all arrangements dovetailed so perfectly that there was no perceptible jar in the machinery. The work of the Interstate Association in stimulating and training shooters was exemplified by the fact that the scores made make the winning scores of previous years look rather small. The total number of targets trapped in four and one-half days was 184,500. This would have been impossible had not the system of squading and manner of handling the contestants devised in 1904 been enforced. On the first day 284 contestants faced the traps and high averages were made. On the second day the state team event varied proceedings. This contest was keenly interesting and will doubtless evoke a large entry next year. The principal event of the tournament was, of course, the Grand American Handicap, and it was also the great event of the western continent as to trap shooting. The winner scored 99 out of 100, being but one ahead of four contestants, who tied on 98. The result has prompted a number of suggestions which the association can digest at leisure. The 1905 Grand American Handicap tournament may in future be equalled, but strenuous work will be required to eclipse it. There is no lack of inducements held out by various cities as places for holding the next Grand American Handicap, so we have a large margin for choice.

The Menominee (Mich.) meet, on July 12 and 13, was a success from every point of view, though a heavy shower of rain somewhat delayed the wind-up. The contestants numbered sixty-five the first day and sixty-one the second, fifty-four of whom shot in all events. Two sets of traps were used and 23,050 targets were trapped during the two days. The local club handled the visitors in a manner which left nothing to be desired. The attendance of spectators was encouraging. The Menominee Gun Club's shooting grounds on Green Bay are unsurpassable as to scenery and convenience of location.

The sixth tournament of the season was held at Albert Lea, Minn., August 2, 3 and 4. With the exception of the second day, which was too damp for comfort, the most pessimistic had no complaint coming. The shoot was under the fostering care of the Albert Lea Gun Club. The affair ran like clock-work and general satisfaction was expressed. A feature of each day was Event No. 7, which called for 10 pairs of targets, something unusual of late. Hon. Henry A. Morgan, president of the local club, and Secretary N. E. Petersen and other officers exerted themselves to make visitors and contestants comfortable.

Though sizzling heat, rain and high winds held sway, the tournament August 16, 17 and 18 at Kansas City, Mo., was pulled off quite satisfactory. It was under the auspices of the O. K. Gun Club, and a crowd was drawn to the Schmelzer Shooting Park. Many names of contestants present are familiar to the trap shooting fraternity. Considerable Mark Tapleyism was necessary to assure comfort on the third day, but despite rain, high wind and clouds, the shooting was, on the whole, good. The club management was commendable from A to Izzard.

The eighth meet, at Colorado Springs, Colo., amid the wonders of the Celestial Architect, was especially notable for the work of the Colorado Springs Gun Club, which, not satisfied with the adage, "Enough is as good as a feast," left no stone unturned which might possibly afford visitors pleasure. The most exacting could find no fault with the appointments. The local tournament committee, Messrs. John W. Garrett, A. J. Lawton and D. C. Sanderson, mutually surpassed each other in their efforts to have everything in apple-pie order. This tournament was held on August 29, 30 and 31, and one hundred and nineteen contestants were in evidence. The contest was close and exciting, and the third day closed with every event on the program rounded out. There was never before such a notable gathering of trap shooters in Colorado. The appointments generally were such as to suggest that no better place could be found for holding of the Grand American Handicap, putting all competing cities on their mettle.

The initial Pacific Coast Handicap was held in San Francisco September 15, 16 and 17, and the enthusiastic Slopers confidently believe that it, with all its splendor, will prove but an infant compared with future similar events, and pray for many happy returns. The San Francisco Trap Shooting Association, our members and a large section of the populace vied with each other to make it an epoch, giving the sport a longitude from which future events will be measured. President Ed Donohue, Secretary A. M. Shields and Treasurer C. A. Haight made everybody feel at home. As the contestants were of the cream of the profession East, West, North and South, of course the event was educating in the highest degree, each securing and giving points which will bear fruit in future. No plus ultra to date was the universal verdict, with loud response from the amen corner.

The Interstate Association's system evoked unstinted praise and was pronounced the model for the future. "Praise from Sir Hubert is praise indeed," for the Slopers themselves are not beginners. The purses were unanimously pronounced the most liberal ever tendered Pacific Coast shooters. On the closing day the attendance of spectators was more than 1,500. That seed was sown in good ground was apparent to pessimists, if any were present.

During the past thirteen years we have confined our work almost entirely to territory east of the Mississippi River, and now it would seem to be wise to work the field west of that river. Our experience this season in Colorado Springs and San Francisco indicates that the territory is already "white unto the harvest," and we have but to shake the plum tree to realize. Our initial tournament on the Pacific Coast accomplished too much of mutual benefit to be allowed to lie fallow and should be followed by one or more tournaments there next year. I would strongly advocate the making of the Pacific Coast Handicap an annual affair, and I have a sanguine belief that the time will not be long until it will be only second to our other great event—the Grand American Handicap.

I again tender our members my hearty thanks for their unlagging support, and though virtue may be its own reward, I fervently wish them something more tangible. In this I include the sportsmen's journals for their unremitting courtesy and encouragement.

Very respectfully submitted,

ELMER E. SHANER, Secy.-Mgr.

Applications for the Grand American Handicap of 1906 were read, the applicants being Denver, Indianapolis, Chicago and Columbus. Each application was accompanied by recommendations and set forth the advantages of their respective claims. By invitation Messrs. A. E. McKenzie and E. H. Tripp addressed the meeting in behalf of Denver and Indianapolis respectively. A petition with over five hundred signers was presented in behalf of Chicago. The matter was discussed at great length, but no action was taken at this time.

By invitation Mr. J. A. Haskell delivered a very interesting address, which was well received and approved. President Bennett, in a few well-chosen words, thanked Mr. Haskell for giving the association the benefit of his views.

Letters advocating class shooting at the Grand American Handicap tournament were read, as were several communications touching on other subjects, all of which were received and ordered filed.

By resolution it was decided that hereafter the club or association on whose grounds the Grand American Handicap is held must use an equal number of sets of traps made by the different members of the Interstate Association, automatic or expert, at the maker's option, and to throw the targets made by said members in their respective traps.

The next business taken up was applications for membership, and the Austin Cartridge Company of Cleveland, O., was duly elected a member.

A recess of five minutes was then taken, after which the meeting was again called to order by President Bennett to consider the election of a board of seven directors, Messrs. Waters and Park being appointed tellers. Messrs. Haskell, Barrell, Keller, Bennett, Durston, Tatham and Parker were declared elected.

Upon motion the meeting adjourned at 6 o'clock p. m., to meet at 10 a. m. the following day.

The adjourned meeting was called to order at 10:40 a. m., December 15, with President Bennett in the chair.

The roll-call showed the following members present: Union Metallic Cartridge Company, by A. C. Barrell; Winchester Repeating Arms Company, by Irby Bennett; Parker Bros., by W. F. Parker; E. I. Du Pont Company, by J. T. Skelly; Marlin Fire Arms Company, by J. Howard Marlin; Peters Cartridge Company, by T. H. Keller; Hoyt Metal Company, by W. P. Markle; Chamberlin Cartridge and Target Company, by Paul North, and the Lefever Arms Company, by A. H. Durston. The following were represented by proxy: Tatham & Bros., by W. P. Markle; Ladlin & Rand Powder Company, by J. T. Skelly; Remington Arms Company, by A. C. Barrell, and the Hunter Arms Company, by T. H. Keller.

New business was at once taken up where left off. It was decided to change the policy of the association and to hold four tournaments on lines similar to the Grand American Handicap, which was by the tournament committee decided as follows: One in the East, one in the South, one in the West between the Mississippi River and Salt Lake, and one on the Pacific Coast. These sections were defined by geographical limitations, eastern section to be east of Buffalo and Pittsburg; southern to be south of the Ohio River and east of the Mississippi River; western to be west of the Mississippi River and east of Salt Lake and Ogden; Pacific Coast to be west of Salt Lake and Ogden.

It was resolved that each and all contestants of future Grand American Handicaps who have not shot in that event prior to 1906 shall be required to send in with their respective applications a specific statement of their respective averages through the six months prior to said application. In case said contestant is a club member, his statement of said general average is to be certified as correct by his club secretary. Any other contestant shall be required to divulge his general average as above set forth, if required so to do by the secretary-manager of the Interstate Association.

A committee, by resolution, was appointed to investigate the situation as it relates to rifle and revolver shooting, and report to the Interstate Association the feasibility of adding that kind of competition to Interstate Association interests. The members of

this committee are as follows: Col. J. G. Ewing, Wilfrid Hartley and W. R. Clark.

Grand American Handicap matters were then taken up, and it was decided by the stockholders' meeting that the Grand American Handicap of 1906 would be held in Indianapolis.

It was decided to hold two championship events, one for amateurs, the other for professionals, in connection with the Grand American Handicap, the conditions in a general way to be as follows: One hundred and fifty targets, 18 yards rise, use of one barrel, entrance \$5, and open to the world.

Mr. A. W. Higgins, in view of his long and efficient connection with the association, was unanimously elected an honorary member.

It was resolved that the tournament committee be authorized to provide for state association tournaments—on application—a trophy to be contested for in team contests of four men to the team and four individual trophies for the members of the winning team, the team trophy to become the permanent property of the club and the individual trophies to become the permanent property of the individuals winning same, the condition of giving the trophies being that each member of the Interstate Association be given an advertisement in the program of the tournament.

A vote of thanks was tendered to the sportsmen's journals for the assistance they have given the association in keeping its work prominently before the general public.

The board of directors elected the following officers for the ensuing year: President, J. A. Haskell; vice-president, W. F. Parker; treasurer, A. C. Barrell; secretary-manager, Elmer E. Shaner.

The directors appointed the following committees: Tournament Committee—Paul North, chairman; Irby Bennett, A. C. Barrell, T. H. Keller, W. P. Markle, J. T. Skelly and A. H. Durston.

Handicap Committee—Elmer E. Shaner, chairman; W. K. Park, B. Waters, C. M. Powers and W. D. Townsend.

Trophy Committee—A. W. Higgins and Edw. S. Lentillon.

The tournament committee decided to hold a tournament respectively in May, June, July, August and September and to add moneys to the programs of the different handicaps scheduled.

The meeting adjourned sine die at 5 o'clock p. m., with all business fully covered.

CANCELLATIONS IN THE NOVICE CLASS.

It appears that the rule concerning the Novice Class, passed at the last meeting of the American Kennel Club, is not understood by exhibitors, or show secretaries. The rule was thoroughly discussed at the meeting and was finally passed to read as follows: "The Novice Class shall be for American-bred dogs only, never having won a first prize at any recognized show, wins in the puppy class excepted."

This rule has been published several times in the Gazette, but entries are still made in Novice Class of dogs without pedigree or breeder. Such entries must be cancelled, as it stands to reason that it is impossible to identify a dog as American-bred if no particulars are given.

The rule met with the approbation of the kennel press, and no argument has yet been advanced against it. It is entirely in favor of the smaller exhibitors, and protects their interests. In order to enforce it, full particulars of all dogs entered in the Novice Class must be given, so that the public, as well as interested parties, can judge of their American breeding. Therefore it must be understood that any dog entered in the Novice Class, without breeder and pedigree, is ineligible and his award, if any, will be cancelled.

The following circular has been forwarded to all Show Secretaries on the Pacific Coast by the Pacific Advisory Committee: "The Secretary of the American Kennel Club advises that he will cancel all wins in the Novice Class, unless sufficient particulars are given on the entry blank to approximately determine whether the dog is American-bred. To accomplish this as far as practicable, it will therefore be necessary that the entry in the Novice Class contain the same details as an entry in the Puppy Class. I would therefore recommend that your entry blanks and premium lists contain, in bold type, the following clause: 'The Novice Class being for American-bred dogs only, the entries therein should show the date of birth, name of breeder and the name of sire and dam.'"

It would be well if this idea were acted upon by all show secretaries.—American Kennel Gazette.

Stockton Cancellations.—The following awards, made at the recent Stockton Kennel Club show, have been cancelled for the reasons stated below and the following dogs moved up:

Class 2, St. Bernards, Novice, Major, particulars not given. Linda Vista takes 2d.

Class 7, Great Danes, Novice, Wren, particulars not given.

Class 17, Pointers, Novice, Bingo, no particulars. Nesbit's King takes 2d.

Class 20, Pointers, Novice, Brownie and Fernet, no particulars given.

Class 25, English Setters, Novice, Ben Less and Sport F., no particulars given.

Class 28, English Setters, Novice, Bessie and Santa, no particulars given. Luella takes 1st.

Class 31, Irish Setters, Novice, Jerry and Lassie Jean, no particulars given.

Class 57, Cocker Spaniels, Novice, Daisy, no particulars given.

Class 83, Dachshunde, Fritz and Fritz, no particulars given.

Class 110, Pomeranians, Novice, Snowball Beauty M. and Beauty, no particulars given.

PACIFIC COAST ALL-AGE ENTRIES.

Secretary Albert Betz of the Pacific Field Trials Club states that conditions for the trials at Bakersfield, commencing on January 8, are very favorable. Birds have never been more plentiful, and the meeting will, beyond question, be one of the most successful held by the club, and will, with the probable exception of one trial, surpass in the number of starters and in the attendance, which promises to be exceedingly large, any trials held this season in the United States or Canada. As to the number of birds, we believe our grounds excel any in the country.

The stakes to be run in the order named are as follows: Members, open to members' dogs that have not been placed in any trials other than the Members' Stake of this club, and which will not start in any open stakes of the pending meeting; Derby, All-Age and Champion Stake. Judge Baughn, of Ridgeville, Ind., will act as judge, assisted by two members of the club to be selected the evening before the trials.

The entries for the All-Age Stake closed on the 15th inst., with a total of twenty-four nominations (seventeen Setters and seven Pointers), as follows:

T. J. Wattson's (San Francisco) orange and white dog Star's Rod (Starlight W.-Rod's Silvia), whelped April 18, 1902. Breeder, B. J. Baum, San Francisco.

John H. Schumacher's (Los Angeles) black and white dog Sir Roderick (Detroit Joe-Dolores), whelped May 19, 1903. Owner breeder.

Wm. Dornier's (Oakland) black, white and tan dog Mariposa (Detroit Joe-Countess Mark), whelped March, 1903. W. W. Van Arsdale, breeder.

S. Christenson's (San Francisco) black, white and tan bitch Belle Fontaine (Count Whitestone-Gracie Gladstone), whelped May, 1902. Frank Jacque, Humboldt, Ia., breeder.

John A. Peebles' (Seattle, Wash.) lemon and white dog Uncle Jimmie (Whitestone-Sport's May Belle).

W. W. Van Arsdale's (San Francisco) white and orange bitch Count's Gift (Count's Mark-Verona Schoolgirl), whelped April 10, 1902. Owner breeder.

W. W. Van Arsdale's white, black and tan dog Calaveras (Cal. Bellboy-Peach Blossom), whelped August 22, 1902. Owner breeder.

W. W. Van Arsdale's white, black and tan bitch Avalon. Same breeding.

W. W. Van Arsdale's white, black and tan dog Keepsake. Same breeding.

W. W. Van Arsdale's white, black and tan dog McCloud Boy (Tony Boy-Sadie Hopkins), whelped December 25, 1900. Hugh Hopkins, Minturn, Cal., breeder.

E. H. Cox's (Madera, Cal.) white, black and tan bitch Countess Lou (Count's Mark-Mary Lou), whelped September 4, 1902. J. E. Terry, Sacramento, breeder.

J. E. Terry's white and orange dog Romp (Orion-Terry's Lady), whelped July 25, 1903. Owner breeder.

J. E. Terry's white, black and tan dog Kenwood (Kilgarif-Ionia S.), whelped June 22, 1903. Owner breeder.

J. E. Terry's white, black and tan bitch Dainty Count (Whitestone-Mecca's Lady), whelped June 13, 1903. W. W. Titus, West Point, Miss., breeder.

J. W. Conside's (Seattle) black, white and tan bitch Policy Girl (Dave Earl-Top's Queen).

Pointers.

J. W. Flynn's (San Francisco) liver and white bitch, Sabine's Molly (Sabine's R.p. Rap-Fannie Coin), whelped April 26, 1903. George Demers, breeder.

John E. Lucas' (San Rafael, Cal.) liver and white bitch, Chiquita (Dr. Daniels-Fan Go), whelped May 17, 1903. Mountain View Kennels, San Rafael, breeder. Stockdale Kennels' (Bakersfield, Cal.) liver and white dog, Cuba Jr. (Ch. Cuba of Kenwood-Florida), whelped March 13, 1899. Owner breeder.

Stockdale Kennels' white and black bitch, Midget (Cuba's Zep-Jingo's Bagpipe), whelped November 1, 1901. Owner breeder.

Stockdale Kennels' liver and white and tan bitch, Ivywood (Ch. Cuba of Kenwood-Petronella), whelped January 22, 1903. Owner breeder.

Stockdale Kennels' white and liver dog, Checkmate (Cuba Jr.-Bow's Daughter), whelped August 1, 1903. Owner breeder.

Stockdale Kennels' black and white dog, Cuba's Jap (Ch. Cuba of Kenwood-Winnipeg Fly), whelped May 13, 1903. Owner breeder.

THE CHIHUAHUA DOG.

We have noticed at many of our bench shows entries of this breed, with now and then a very good specimen shown. In this city there is quite a number of these dogs, in fact they are by no means a rarity in California. The following account given during an interview with Miss Rosina V. Casselli (who has a troupe of performing Chihuahua dogs), which was published in Our Dogs, in consequence, will be of corresponding interest to the Coast fancy:

"To begin with, I may mention that out of my troupe of twelve dogs eleven are genuine Chihuahua (pronounced Chi-wa-wa) specimens. The smallest of the troupe, i. e., the one sitting on my hand, weighs about a pound, and the largest only five pounds. The rest from two and one-half to four pounds. The odd dog, which is the one second from the end, and just at my right hand, is a specimen of a small Brazilian breed of Spaniel. The type appears somewhat different to any of the other breeds of Spaniels, and in Rio de Janeiro, where I purchased this specimen, the type appears to be quite common, but whether they belong to a natural South American breed, or are a cross-bred King Charles or some similar breed, I am not prepared to say, as any amount of inquiry failed to shed light on their history.

Regarding the Chihuahua dogs, I am in a position to be well posted. Of all the canine breeds there is probably none so little known or understood as the little Chihuahua dogs of Mexico, and which were in

their natural state a distinctly Mexican race of wild dogs, very shy, and for their size very savage.

"They inhabit only a limited section of the mountainous state of Chihuahua, from which the dogs derive their name. It is believed that these wild dogs are now extinct, although they are reported by the natives to have been seen up to about fifteen years ago, and it is barely possible that they might still be found in some undisturbed spot.

"These dogs were noted, not only for their extreme smallness, but for other peculiarities which they possess.

"Their legs were very slender, and their toenails very long and strong, and very serviceable to them in making their homes, as they lived in holes in the ground. Apart from their size, their most striking feature was their head, which was very round, and from which projected a very short and pointed nose and large standing ears; there was also a peculiar skull formation, found only in this race. In color they varied somewhat in shade; it was through a mixture of reddish black and fawn, in which both vary considerably in different specimens. The hair was short, fine and thick, and the wild dogs, even when taken young, could not be domesticated, neither would they live any great length of time in captivity.

"The Indians, however, had a way of taking these dogs and crossing them with the small specimens of the domesticated Indian dog, and in this manner produced a domesticated Chihuahua dog, which was kept replenished from the wild stock as much as possible. Although the type was to a certain extent modified and varied, the finer specimens retain it in a most prominent way. Until the opening up of the Mexican Central Railroad, in about the year 1887, and which passes through the section in which the wild dogs were most plentiful, there were plenty of fine specimens to be had, as prior to this time this section was difficult to reach, being in a wild country, hundreds of miles from so-called civilization. The completion of the road, however, brought hordes of tourists and others, who rapidly thinned out the dogs, and scattered them in all directions, with the final result that today it is a piece of good luck to secure a really fine specimen.

"Although the wild stock is no longer available, the type is so fixed that very fine specimens still crop up here and there, but there is no certainty when or where just such a one can be found, as the natives, although they reaped a rich harvest for a time, failed to provide for the future, as they, with their experience, might have done. I have often been asked why it was that the breed has not been taken in hand by fancy dog breeders, knowing that they were very salable at fancy prices. My answer to this is that it is not for want of effort or interest, but failure to get genuine specimens the real cause.

"There are many difficulties in the way. In the first place, they are extremely difficult to breed, and a thorough understanding of these dogs in particular must be had. Without experience of them breeding is a most difficult matter, as the chances are all on the side that the mother would die in giving birth to her litter, and even did she survive the ordeal, she is likely to destroy her young, and for a time great precaution must be used to prevent this.

"Again the Chihuahua dogs are very exclusive in their affections, and as a rule will choose a favorite among those that care for them, and become extremely attached, and once such an attachment is formed it is very difficult to break off, and to turn them over to strangers is apt to be a fatal process. When procured at a proper age they are apt to be made a great deal of and spoiled, for they are very affectionate, and demand all sorts of attention. If they don't get it, they will pout and mope around for hours and seem to try and make their bodily suffering equal to their mental by hiding in the coldest and draughtiest spots they can find. Neglect of attention soon tells on them, and it is that more than anything else that has produced the very general idea that these dogs cannot exist out of their native climate. Such, however, is not the case, as they can stand any climate, and are strongly constituted. I have never known one to have distemper. Both of my Brazilian dogs had it. I lost one, and just got the other through by a miracle.

"The Chihuahua dogs slept in the same box with these nearly three weeks before we knew what was the matter, and not one of them got a touch of it. No one should acquire a Chihuahua dog unless inclined to pander to their whims and notions, and intend to continue so to do. Dog trainers are almost united in their belief that small dogs are useless as performing dogs, but most who have seen my troupe perform must of necessity alter their opinion and admit that the Chihuahua dogs are marvels of intelligence.

American Bred Dogs.—The Los Angeles Times publishes the following special dispatch concerning a new rule adopted by the American Kennel Club at a meeting held in New York on December 22nd:

At a meeting of the American Kennel Club an important decision was rendered regarding what shall be considered an American bred dog. Hereafter only dogs bred in the United States shall be allowed to compete under this head. As a consequence of this ruling Canadian dogs will be barred, except where special mention is made that they may compete. Fifty of the 109 clubs of the association were represented at the meeting which followed a reception, celebrating the twenty-first annual birthday of the organization. The presiding officer was H. H. Hunnewell of Boston. The question discussed was whether or not a dog bred anywhere on this continent shall be called American. When a vote was taken it was decided that the word American, wherever used by the American Kennel Club, shall mean a person "living in

the United States."

It was also voted that the Canadian dogs shall not compete for special prizes at the bench show, except where the conditions state that the prizes are for American and Canadian dogs. This will also apply to the Produce stakes of the specialty clubs in the future. It was further decided that the produce of a bitch bought in a foreign country and whelped in the United States shall be eligible to registration as American bred, if the purchaser is an American. Canadians, of foreign residence, may not give an American registration for the produce of such a bitch sent to the United States to whelp, the nationality of the breeder determining the right to such registration.

Hammam for Dogs.

Dresden has started baths for dogs. It is reported that the public baths of that city will shortly receive an addition in the shape of a new annex, which will consist exclusively of bathing establishments for dogs, organized on the strictest lines of class distinction. There will be first, second and third class, subdivided into swimming and single wash-baths. It is even gravely stated that there will be a hairdressing department. What next?

HUNTING NOTES.

Weather conditions for several days past are much conducive for great sport to-morrow on marsh, upland and snipe patch. The northerly winds have given the sportsmen who frequent the Suisun, Sonoma and Petaluma marshes and the up-river tule sections a decided advantage over the shooters who visit the resorts south of a line drawn between the mouth of Petaluma creek and the opposite bay shore at San Pablo. During the recent rainy and stormy weather however, these southern sections turned out many good bags of ducks—newly arrived northern birds, among which fat canvasbacks were very plentiful. The comparatively small rainfall this week, up to Friday morning, was not enough to change conditions generally, there being but few fresh-water feeding ponds in the interior, the ducks still frequent the baited ponds and tidewater feeding grounds.

Reliable observers claim that, all in all, there are as many ducks in evidence here and there on the many shooting grounds, and particularly in the Sacramento, Yolo and San Joaquin basins as have been noted for many years past. The shipments of market hunters and the bags shot by sportsmen seem to bear out the statement. As for geese, they are to be found in some sections apparently by the millions, notably so in Colusa and Glenn counties.

Quail hunters, excepting the members of some of the Marin county gun clubs, have now to go a considerable distance from this city to get feathers, for the majority of the nearby hunting grounds have now been pretty well shot out. The few birds that are left are wise to man and dog and keep safely out of the hunter's way by taking to thick covert.

Richardson's Bay is keeping up its past reputation as a loafing place for immense flocks of "caus" and bluebills, where they stay, resting in safety, until routed out by rifle shot or power boats sent out to make the birds move.

We know of a cut off between the rolling hills on the northerly spur of land that dips into the bay, about 300 yards from Dr. Lyford's residence, that is about as good a flightway for the birds as can be found anywhere. The morning and evening shoot, for limits is had by shooters standing in a stubble-field, taking the birds as they fly across the narrow neck of land. Thos. Dieffenbach bagged 33 fat canvasback late one afternoon this week in less than an hour.

During the week some excellent shooting was on tap along the bay shore near San Pablo station. Shooting from one of the brush blinds last Sunday Mr. Harry Freder accounted for the limit early in the forenoon.

The Alvarado and Mt. Eden shooting section is still productive of a plentiful supply of spoonbills. Those of the birds just down from the northern feeding grounds are in splendid condition.

One of the best duck hunting and snipe shooting preserves between Collinsville and Rio Vista is that of the Montezuma Gun Club. The club membership is composed of W. W. Richards, Walter D. Mansfield, I. F. Nickels, W. C. Swain, J. F. Rodgers and Fred P. Butler. The club house is most comfortably appointed. The resort is easy of access by train, steamboat and launch, the club having a landing on the river, at which point the members and shooting guests are taken by the launch either to Collinsville or across the river to Antioch, where connection is made with the trains.

On the club ponds can always be found a plentiful supply of birds; at this time of the year canvasbacks are the most plentiful. Within 100 yards of the club house there is a grand snipe patch which has produced a number of limit bags this season.

Last Sunday W. W. Richards, W. D. Mansfield, W. C. Swain, George H. Newman and the writer composed the shooting party on the club grounds. A frosty morning, followed by a very pleasant, sunny day, was not just what an exacting hunter would like for a good duck shoot, but at that there was a fine flight and good bags were made. A number of blackjacks killed were found to be pretty well soaked with oil. This sticky substance the birds came in contact with in San Pablo Bay probably.

One singular feature noticeable was the number of ponds frozen up, both on the Montezuma and the adjoining preserves. So much was the ice in evidence that there was but little shooting done on the U. M. C. ponds nearby. In consequence the flight was not quite up to the tradition of the preserve.

Further, the snipe patches were also frozen solid, there was nothing to do for the longbills until the ground thawed later in the day.

The Willow Slough Gun Club of Woodland, having a membership of sixty shooters, is endeavoring to settle a vexed question—whether or no club members may shoot for the market. The sentiment of the majority, it is claimed, is against it.

Geese are to be found on Ryer Island, above Rio Vista, now by the countless thousands. These birds are in pretty good condition at present.

Ducks in Tomales Bay.

Tomales Bay is at present a favorite resort for large flocks of ducks, canvasbacks, bluebills, widgeon and other varieties. Several months ago a scow schooner was sunk in the shallows off Marshalls, a part of the cargo was grain. This stuff was eventually scattered from the vessel's deck and hold all over the bottom of the adjacent bay. The ducks were not long in finding the feed and in consequence are now much in evidence at that locality. One hunter recently killed 150 canvasbacks in three days, shooting on the flyway of the birds in going to or returning from the submerged granary.

Santa Clara Valley Notes.

Recent reports from San Jose state that hunting on both marsh and upland has been excellent. During the present holiday season the sportsmen of that section have not been out in as great numbers as usual. The majority of the duck hunters favor the vicinity of the drawbridges, which lie about four miles out of Alviso. There is a heavy demand for ducks at the local game markets. Many of the Alviso duck hunters are kept busy supplying the city merchants.

Among the returns received are the following: Dan Flannery and Joe Nealon, the limit of ducks; G. Broderick, 35; E. Marcene, 22; J. Bailey, 34; J. Freine, 36; A. Bosquet, 17; Fred Fowler, the limit; Louis Wanderer, the limit; W. Lane, 38; Sam Lowe, 12 canvasback; A. Frick and G. Machado, 11 ducks each at Milpitas.

Quail shooting is fine in all parts of the valley and adjacent foothills. There are fewer persons hunting quail than ducks. The vicinity of Boulder Creek, Mount Hamilton and Stevens Creek are reported to be good localities. H. Sault secured the limit of quail and four wild pigeons near Boulder Creek on the 21st inst. J. Wilmes shot 16 quail near Stevens Creek.

A party of Haywards hunters spent a week back of Mount Hamilton recently. They had great sport and got the limit on quail every day. The following sportsmen comprised the party: C. C. VanEaton, Ed. Moffit, J. W. Nelson, of Oakland, F. Monnett, Bert and Arthur Manter.

They Like It Over There.

The grand bag of wild ducks secured at Balnagown Castle in three days, during the recent visit of Prince Arthur of Connaught, was on the part of English sportsmen the subject of much favorable comment. The district around the Castle is admirably suited for this form of sport, being studded with lochs, and the birds formed a strong flight from one to the other of these sheets of water, and gave excellent sport. The young Prince was delighted, and little wonder, for in the three days the bag included upwards of 2400 head of wild duck alone.

This puts the nineteen limits on canvasback by Alameda Gun Club members last season a bit in the shade.

Mudhens Are in Demand.

The humble and much abused mudhen (crow ducks in the East) has gradually obtained a fairly strong position as a game bird and table delicacy with Eastern sportsmen. In telling of the bird, looked upon with contempt by nearly all shooters and passed up by almost all of them when it comes to casting about for a day's shooting, one sportsman states:

"It is a fashion among sportsmen to decry the great American coot, mis-called a mudhen. It does not feed on mud, does not like mud, and will not live in mud if it can get any other sort of dampness to live in.

"It is a grain-feeding bird, fond of wild rice, will eat duck grass and such things, and prefers just such food as the mallard loves. It is good eating when properly prepared, and good shooting.

"It is not uncommon to see a man who has talked a good deal about the slowness of a mudhen get into a boat, go out on a lake and flush and miss a dozen of them. The fact is, the big coot has an appearance of awkwardness in flight and it takes up some time in getting off the water, but it is always going a good deal faster than it seems to be going, and, speeding down the wind, it is at least as hard to center and stop as many of the ducks—sawbills, for instance, or spoonbills or gadwalls.

"It is hard to account for the prejudice against the mudhen. It has a fishy flavor when scarcity of other food compels it to feed upon minnows and other chubs, but so have other ducks in similar straits.

"When making its way down from the north, using woods lakes for stopping places and winding down the big rivers, it lives on wild rice almost wholly, and it has a delicate and delicious flavor. There is always a chance that a mudhen has been feeding upon fish, because of the possibility that it has been on short commons somewhere; so it is better to skin it as a matter of precaution, but it is easier to skin any kind of duck than to pick it, and the skinning does not injure the table qualities.

"In preparing mudhens for the table they should be skinned and the legs cut off and thrown away. Only the breast and back should be served. They may be cooked in any of the customary ways of pre-

paring ducks and will be good. Some people parboil them, but this is not necessary and detracts from their flavor.

"They should be hung for a day or two after they are dressed, but so should any other wild fowl. No man should stay at home because there is only mudhen shooting to be obtained."

Mudhens are the bete noir of the club preserve grounds for they have a capacity for, and a persistent cunning in cleaning out the baited ponds of the food intended for the ducks.

Many of our Coast sportsmen praise the table qualities of this bird. At a swell San Diego resort mudhens have for several years been quite a favorite on the bill of fare, where they were designated as "poule dou"—water hens. The distinction in nomenclature may not have added to the flavor but it does certainly place the bird above the prosaic plane to which it has been relegated by sportsmen. In this State, in fact all over the Coast, mudhens are so plentiful that in some sections they are regarded as a nuisance.

This situation is but temporary, for the mudhen's indifferent place in the category of game birds here will soon pass away and the bird will in due course become comparatively scarce as has been the history of other, once plentiful, birds.

A Lucky Hunter.

German sportsmen take peculiar pleasure in stalking deer in the "roaring" season, but as they consider the trophies and not the venison, it does not matter. Rominten is the Kaiser's favorite deer-stalking forest, and nobody else is allowed to shoot there except the chief forest officials, the wardens of the forest, or those sub-foresters who kill a stag at their orders. Under Kaiser Wilhelm I the Rominten Heide was neglected; but after the death of Prince Frederick Charles in 1885 Prince Wilhelm's attention was drawn to Rominten, and from that time this forest has been reserved for his use alone. He did not, however, visit it till the autumn of 1890, and then—as there was no residence—he put up at the village inn, a very primitive sort of place for lodging Royalty! The following year he had a Norwegian house of wood erected by Norwegian workmen. The wood and even the bricks for the stones were brought over from Norway. The Norwegian workmen fancied that Germany could not supply pines like theirs, and were rather dubious as to Teuton bricks, so thought they had better bring their own with them. The Rominten Heide, as the forest is called, comprises about 72,000 acres, and is the remnant of a gigantic forest that spread centuries ago from Memel to Ortelburg, and was about forty miles broad, and served as a defence against anyone coming from Poland. It is the "Wilderness," as this tract of country in Lithuania used to be called. The Order of Prussian Knights acquired possession of it, and ruled it and hunted in it from their mighty fortress at Marienburg; and later on the Great Elector was fond of hunting there. The best German stags come from the Rominten Forest. Their heads are massive and dark, and the stalking in the forest is difficult and interesting. The stags, when they "roar" in the rutting season, have a very deep tone—a powerful throat, as they say over here. The Kaiser always kills some very fine pointers. The forest has also a good reputation for trout. Besides the Rominten, from which it derives its name, there are numerous streams and small lakes.

COMING EVENTS. Rod.

April 1-Sept. 15. Oct. 16-Feb. 1—Open season for taking steelhead in tidewater.

June 1-Jan. 1—Open season for black bass.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Sept. 10-Oct. 16—Close season for catching salmon.

Sept. 15-April 1—Open season for lobsters and crawfish.

Oct. 16-Nov. 15—Close season for taking salmon above tide water.

Nov. 1-April 1—Trout season closed.

Nov. 1-April 1—Closed season for taking steelhead above the water.

Nov. 1-Sept. 1—Open season for crabs.

Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and age hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Oct. 15-April 1—Open season for English snipe.

Oct. 15-Aug 1—Deer season closed.

Bench Shows.

Jan. 4, 6—Southern Ohio Kennel Club. Hamilton, O.

Jan. 17, 20—Cincinnati Kennel Association. Cincinnati, O. John C. Schomaker, Secretary.

Feb. 12, 15—Westminster Kennel Club. New York. Robt. V. McKim, Secretary.

Feb. 20, 23—New England Kennel Club. Boston. Wm. B. Emory, Secretary.

Feb. 28-March 3—Washington Kennel Club. Washington, Pa. F. C. Thomas, Secretary.

March 7, 10—Duquesne Kennel Club. Pittsburg, Pa. F. S. Steadman, Secretary.

March 14, 17—Passaic County Fish and Game Protective Association. Paterson, N. J. N. J. Mathews, Secretary.

March 21, 24—Wolverine Kennel Club. Detroit, Mich. K. G. Smith, Secretary.

May 29, 30—Long Island Kennel Club. Jos. M. Dale, Secretary.

June 1, 2—Ladies Kennel Association of Mass. Mrs. L. M. Speed, Secretary.

June 9—Wissahickon Kennel Club. Wissahickon, Pa. J. Sergeant Price, Secretary.

Field Trials.

Jan. 9—Georgia Field Trial Association. Waynesboro, Ga. P. M. Essig, Secretary, Atlanta, Ga.

Jan. 8—Pacific Coast Field Trials Club, 23d annual trials. Bakersfield, Cal. Albert Betz, Secretary, 201 Parrott Bldg., San Francisco.

Jan. 8—Texas Field Trial Club. 4th annual trials. Kalesa City, Tex.

THE MAKING OF BABY BEEF.

(Jos. Wing, before the Louisiana Stock Breeders' Association, condensed for Farm and Ranch.)

I sometimes illustrate this idea (of feeding calves just a little less than they want) by telling the boys how to keep their sweethearts glad to see them. That is a thing of importance to the young man, and to the sweetheart, too. It is mighty good to have her glad to see you when you call upon her, and the way is easy. Here is the rule, remember it. Always go away from her about five minutes before she wishes you to go! If you will do that, when she sees you coming again she will welcome you with a smile, but if, instead, you over stay five minutes, if you tire her with your company, when next she sees you coming, do you know the first thought that enters her mind? It is, "Why, here comes that man who made me so tired the last time he was here."

It is exactly so with the calf, too. When he comes up to get his feed, if he has been overfed, he thinks, "Why, this is the food that gave me that pain under my apron," and declines with thanks. Of the twelve hundred babies on Woodland Farm we try to keep every one in this eager expectancy, each one wishing that he had three grains more of corn.

Well, what next? Next that calf needs a clean, dry bed and sunny place. He needs a chance to find nice clover and alfalfa hay, some corn fodder, nice and bright, any forage that is available, in sufficient amount and of as good quality as can be had. He needs a small yard, dry and clean.

Perhaps I should have said before that the baby steer should be born in the fall. That mother of his will, if given good care and feed, with silage and alfalfa hay, and a comfortable place to live, give as much milk in winter as she will in summer on June pasture. There is leisure on the stock farm in winter to care for that calf right. The feed that he eats, though in unlimited amount, does not really amount to very much when he is so young a baby, and the flies do not trouble him then! And when summer comes he is a great big, strong fellow with a tougher hide and so much longer tail.

This reminds me of what I call "My Doctrine of Opportunity." Those calves finding forage in the barn before them, will consume a great deal more than they would had they to go and hunt their feed in the pasture. That matter of opportunity is all. It happened to me once to visit a friend of mine who was in the penitentiary. He was not a bad man, and as I talked with him the thought came, "Why, this man is here just because he has had so good an opportunity to get here." Then I thought of other friends, honored men, men in the ministry, teachers, good farmers, each having his especial opportunities. Then I remembered the calf. If one is given the opportunity to satisfy that little, innocent appetite of his, to eat the right sorts of food, he becomes a prime "Baby Beef," he makes his owner a profit; and that calf, denied his right, given no opportunity, bawls around the farm for several years and goes away in debt to his owner, not having paid for the food that he has managed to consume.

Well, why all this fuss? Why not continue the good old way of letting them mature slowly and finishing them after maturity has been reached? Is it not a lot of bother to fuss with babies for so many months?

Yes, but it pays. I have said that babies alone paid to feed; that is because with the baby the feed "sticks to the ribs," as they say. It does not stick with the older animals nearly so well. Why, when I am at home I have a fine illustration of this truth, for at my table sit three fine boys. One of these boys is twelve years old, one is eight and one is three. I help all the plates, and help my own, and note that I eat more than the oldest boy, and he more than the one younger than him, and that blessed baby eats half what the older brother eats, because he can't hold more, bless him! Well, we eat the whole year around, then we go to the scales to be weighed. I rather dread getting on to the scales these days, for I usually find that I have lost weight during the year, and that I

do not actually weigh as much as I did the previous year, and that worries me, when I remember all the food that I have eaten, all to no apparent avail. Why, it has not paid to feed me, it would have been cheaper to have knocked me in the head in the fall. But the oldest boy has gained about eight pounds, and that middle boy has gained ten, and the blessed baby has gained twelve pounds! Think of it with less food each one has gained a hundred times as much as I have gained. It has stuck to their ribs, but not mine.

"It is a fact that a pound of dry matter fed to a calf when it is very young will make a pound of gain on its body. Now, that seems impossible, but you must remember that the pound of gain is part of it water, and I speak of a pound of absolutely dry matter. Now, can you not see why it is imperative that you should feed those calves all the good food that you can get for them to consume while they are very young babies?"

Here are some figures for you to remember. It costs to create cattle about according to these figures, which are based on about forty-five different experiments of different experiment stations and fat stock show records. The value of the figures is in the comparison, for, of course, prices of food stuffs vary. For the first year it costs to make the baby grow, while yet all his cells are active, \$3.50 per hundred pounds. For the second year it costs a little more than double that, or \$7.50 per hundred. For the third year \$11, and for the fourth year \$17. Now you see why our food should go to babies, why you simply can't afford to lose your opportunity to feed them well at the earliest possible age.

Warranted to Give Satisfaction.

Gombault's
Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

For Sale

Inquire of H. R. RAND, Fashion Stables, Ellis Street.

BAY GELDING. Five years old, stands 17 hands, weighs 1200 lbs. By St. Whips. 1st dam by Daly, 2d dam by Milton Medium. Thoroughly broken single or double. A great actor, a grand road horse and warranted SOUND.

CHESTNUT GELDING. 8 years old, 16 hands high, weighs 1200 lbs. A grand surr or trap horse. Has been driven by a lady in the Park all winter. Without a doubt, this is the best family horse in the country. Guaranteed Sound.

One New Side Bar Stivers (of N. Y.) Buggy. Pneumatic tires, Carmine gear, black body.
One Side Spring, High Back, Business or Run-About Buggy.
One New Chicago Road or Breaking Cart. Long shafts. Best one in the city.
One Set New Coach Harness.
One Set New Surry Harness.
Ten Set New Single Harness.
Two Sets of Run-About Harness.
Also Light Road and Track Harness. Some Fancy Halters, Pads, Etc.

FOR EXCHANGE

ONE GOOD LOOKING SOUND YOUNG ROAD HORSE, good actor, thoroughly city broken—and **ONE CHESTNUT GELDING** sound and a good roadster; both guaranteed every way. I want to trade the above horses for a well matched thoroughly broken team something that will do to use for park driving.

Address, H. R. RAND, Fashion Stables, San Francisco.

"SAVE-THE-HORSE"

SPAVIN CURE

Registered Trade Mark

Running Horse Owners and Trainers

"Save-the-Horse" has proven absolutely unailing on Bucked Shins. One bottle will cure from five to twenty cases. For strained, injured and broken down tendons, it is marvelously effective.

W. A. Redmond, Attorney, McMill Building.

Washington, D. C., December 27, 1904.

Troy Chemical Company, Binghamton, New York.

Gentlemen—I first tried the remedy on a thoroughbred, which had bowed both tendons and which had been fired once and blistered a number of times, but every time he was trained one or the other of the legs would fall. This happened three years in succession. Last Spring I bought a bottle of "Save-the-Horse," and used it according to directions with the result that he started 7 times, at all distances in July last, and won 3 times, second 3 times and third once—an excellent record—and he appears to be perfectly sound to-day, and will be raced next month. I am firmly convinced without your remedy he would not have been worth a dollar as a race horse.

I have a roadster which stepped in a hole at pasture and wrenched a hind ankle—so badly that he could not put his foot on the ground. I was advised to shoot him, as it was claimed that he had injured his hip. Instead, I blistered him and he became serviceably sound, but limped at every step. Upon close examination I found a growth between the coronary band and the ankle which developed into ring bone. I used one bottle of "Save the Horse" on the growth, and it entirely disappeared. He has not taken a lame step since.

Knowing the value of the remedy I do not hesitate to recommend it to all horse owners of my acquaintance.

Very truly,

W. A. REDMOND.

The fire iron is uncertain; blistering is less effective, and both necessitate laying up the horse from four weeks to two months; mercurial and poisonous compounds produce irreparable injury. "Save-the-Horse" eliminates all these factors.

POSITIVELY AND PERMANENTLY CURES

Bone and Bog Spavin, Ringbone (except Low Ringbone), Curb, Thoroughpin, Splint, Capped Hock, Shoe Boil, Windpuff, Weak and Sprained Tendons and all Lameness.

Horses can be worked as usual, it cures without scar, blemish or loss of hair.

\$5.00 Per bottle, written guarantee with every bottle, constructed solely to satisfy and protect you fully. We know positively "Save-the-Horse" will absolutely and permanently cure, and for that reason guarantee is made all your way. The need of second bottle is improbable except in rarest cases. Send for copy of guarantee and booklet. All druggists and dealers or sent express prepaid.

BLACK MINORCAS.

The Black Minorca is one of the most stately and aristocratic of all the breeds recognized by the standard and at the same time a very profitable breed to keep.

This variety is black from the tip of its beak to the end of its toes, but when we say black we do not express at all, for the plumage of the cock fairly glitters with a brilliant green iridescence quite impossible to describe.

The comb of the cock is very large and upright divided in to six spikes and extending back over the head. The wattles are red, long and pendulous, the earlobes pure white and of the texture and appearance of the finest kid leather.

The comb of the hen is very large, thin, six spiked and falls with a graceful curve to one side. The wattles are moderately large and the earlobes pure white, as in the case of the cock.

The plumage of the hen shows the same greenish black iridescence seen in the plumage of the cock, but is not quite so brilliant.

Both sexes have an upright proud carriage, very long backs and full tails, that of the cock describing a sweeping curve, the long sickle feathers showing the characteristic sheen of metallic green.

The standard weight for cocks is 8 pounds, and for hens 6½ pounds. These weights are easily reached making the Minorcas the largest of the Mediterranean class. Black Minorca eggs are pure white, very large, and the hens are very prolific layers. The eggs frequently weigh from 30 to 32 ounces to the dozen when produced by fully matured hens, and as layers the hens rank among the best.

The Black Minorcas belong to the Mediterranean class, and originally came from Minorca, one of the Balearic Isles, lying in the Mediterranean Sea, east of Spain.

They have been bred in this country about twenty-five years, and have been popular from the first. The highest price ever paid for a chicken was paid for an American bred Black Minorca which was sold to a German breeder for \$1,000.

While somewhat sensitive to cold, on account of their large combs and wattles, one of the most successful egg farmers of this country keeps Black Minorcas, and his poultry yards are located near Spokane, Washington.

At the same time a warm climate is where they are most at home, and breeders in the Southern States will find them the ideal fowl for the climate they live in.

Black Minorcas belong to the non-sitting breeds but as they are all-year layers this is an advantage in these days of incubators and brooders. J. W. Miller.

Very fortunate indeed is the swine raiser who is not bothered more or less with a case of scours. The best remedy the writer knows of to check the scours in young pigs is to feed the sow sparingly, adding a tablespoonful of scorched flour to the ration twice a day or two or three times a day for two or three days. Meanwhile would suggest that the pen be thoroughly cleaned and see that the sow has plenty of exercise. Keep the pigs quiet in a warm dry bed. We deem it worth while to call your attention to the fact that the flunk is a weak, shrunken part of many a fashionably-bred hog and will be apparent just as soon as you make it a study long enough to compare the good flunk with the many poor ones that go into the ring. A good flunk is a far better thing than a fancy ear or fancy markings, and if either point is to be sacrificed in selecting breeders, save the flunk and add symmetry and quality at the same stroke. —Ex.

The farmer who knows nothing of balanced rations and who will not inform himself should seek safety and the welfare of his stock in providing a variety of feeds. This may be but a blind way to progress, but better this than no progress.

The science of feeding has gone hand in hand with the science of breeding so that it is often hard to distinguish the merit of one as compared with the other. Each has a place. The well bred, well fed farm animal yields the greatest profit.

The Perfectly Gaited Trotting Stallion

ALTA VELA 2:11-4

(Reg. No. 22449)

Sire, ELECTIONEER, sire of 166 in 2:30 and grandsire of Major Delmar 1:59¾.

Dam LORITA 2:18¼ (dam of Alta Vela 2:11¼ and Palori 2:24¼) by Piedmont 2:17¼; second dam, Lady Lowell (dam of Ladywell 2:16¼ and Lorita 2:18¼) by St. Clair; third dam, Laura, dam of Doc, sire of Occident 2:16¼.

Address all communications to BREEDER AND SPORTSMAN, 36 Geary St., San Francisco.

The Standard Bred Stallion

ODANROC

FOR SALE.

ODANROC IS A COAL BLACK STALLION; was four years old last September; is handsome. He is stylish and sound as a new dollar, and with less than four months' work has shown a trial mile in 2:28 and quarters at 2:20 clip. Odanroc is by Coronado 2:12¼, he by McKinney 2:11¼. Odanroc's dam is the standard and registered black mare Bessie Rex 2:28¼, sired by Atto Rex 2:21, he by Attorney, he by Harold Bessie Rex's first dam is the black mare Klatta, standard and registered. Odanroc is in every respect a fine individual. Stands 15¾ hands, weighs 1150 lbs. and is a square and level headed trotter. Wears no boots, is as kind as a kitten, fears nothing, and any child can drive him with safety. For price and further particulars address

G. W. DEFORD,
P. O. Box 303, National City, Cal.

McKINNEY STALLION FOR SALE.

ONE OF THE GRANDEST LOOKING AND best bred McKinney stallions ever foaled is offered for sale. He is five years old, sired by the great McKinney 2:11¼, dam by Dexter Prince, that sired the dam of Nora McKinney 2:12¼ (trial to wagon 2:09); second dam by a son of Electioneer; third dam by McDonald Chief, sire of the dams of Tom Smith 2:13¼ and Stella 2:15¼. This stallion has never raced and has not been trained, but has trotted miles better than 2:30 and quarters in 35 seconds. Stands 15¾ hands, weighs 1050 pounds, is a beautiful bay with black points and without a pimple. Is an exceptionally handsome horse, fine disposition and has marvelous endurance. No horse living has cleaner, straighter or more perfect legs. A grand prospect to train and a sure money-maker in the stud. Would make one of the grandest roadsters in America. For further particulars address

BREEDER AND SPORTSMAN,
36 Geary St., San Francisco.

FOR SALE OR LEASE.

Two Prince Airlie Stallions.

PORTOLA 37413, a handsome golden bay, 7 years old, 16 hands, weighs 1190 lbs.

MENLO BOY 37401, a magnificent brown with white points, 6 years old, 16½ hands, weighs 1200 lbs.

These two horses are full brothers being sired by Prince Airlie 28045; he by Guy Wilkes 2:15¼, sire of Fred Khol 2:07¼, Hulda 2:08¼, Seymour Wilkes 2:08¼; first dam Signal by Del Sur 2:24; second dam Lady Signal 2:35¼ by Signal 3327. Both of these horses are very fast for the amount of work, being only a few months last year, showing quarters around :34 and :35.

For further information apply to
P. H. MCEVOY, Menlo Park, Cal.

Registered Shire Stallion

FOR SALE.

JET BLACK STALLION: WEIGHT 1750; 7 years old. Is a blocky built, big boned horse and a sure foal getter, and his colts will be shown. Price reasonable. For further particulars apply to office of BREEDER AND SPORTSMAN.

JACK FOR SALE.

A BLACK JACK WITH LIGHT POINTS; large, heavy boned prompt and a good handler. Is a good foal getter and his foals are excellent individuals. Price very reasonable for prompt sale. Address for further particulars, S. B. WRIGHT, Santa Rosa.

INCUBATOR REMINDERS.

Study your incubator.
Acquaint yourself with all its parts.
Read the manufacturer's directions for setting it up.
Set it up carefully and according to instructions.
Never try to run an incubator in a drafty place, nor near a stove nor where the sun shines upon it.
Set fertile eggs only. Waste no efforts upon those that are doubtful.
Learn how to trim and clean a lamp.
Keep the lamps full and the wick and tube clean.
Avoid smoke.
See that the eggs are clean and dry before setting them.
Balance all eggs, large end up, a few hours before placing them in the tray.
Do not overfill the tray.
Turn every egg the third day.
Cool the eggs every morning.
Be sure your hands are clean when handling eggs.
Test all eggs by the seventh day.
Test again by the eleventh day.
Test again by the fifteenth day.
If the air space is too large, supply moisture; if too small put a saucer of dry lime in the room and run without moisture a day or two.
Do not expect to learn all about the air cell the first hatch. You will learn that later.
Do not disturb the eggs after the evening of the eighteenth day.
Have a regular hour for incubator work.
Do not tinker too much with the regulator before placing the eggs in the egg chamber.

"We have frequently called attention to the fertilizing value of wood ashes, especially as a source of potash. Without unnecessarily repeating what we have said as to the composition of ashes and the crops for which they are best suited, it may be advantageous to point out that while the commercial value of ashes will depend upon the potash and phosphoric acid content, the manurial value will be considerably higher. The presence of a large amount of lime, the mild alkalinity of the ash, the particular combinations in which two elements of plant food are held, are all, undoubtedly, factors that enhance the value of wood ashes as a fertilizer. In other words, the benefits derived from their use include, in addition to the supplying of mineral plant food, the correction of sourness, the conversion of injurious iron compounds into harmless forms, the encouragement of nitrification, and the general improvement of the tilth of the soil. It has frequently been noticed that soil to which ashes have been applied is much better able to resist the injurious effect of a protracted drouth than adjoining land that has not been so treated."

A novelty at the large agricultural show in London is a churn which is reported to make butter in sixty seconds. The cream is placed in the vessel so that the "dasher" is in the center, and about one and one-half inches below the surface. The handle is then turned slowly for a few seconds, and then at a good speed, and within one minute butter is formed. If some fresh cold water be poured in and the handle turned slowly two or three times, the butter is ready for washing and making up. There is nothing especially wrong with these quick butter gatherers, except that a large per cent of the butter fat is left in the milk, the butter is of poor quality and its keeping possibilities are very low.

Feeding embraces a large number of farm subjects to which it is directly related. Crop production is one of these. If the stock owner knows how to pasture his cattle, hogs or cows cheaply his foundation for success has been laid. The abundant winter pasture that may be had in the Southwest nearly every season for every month during the winter, prompts this statement. Wheat, oats, barley, emmer, speltz, rye, rescue grass, burr clover and the vetches are our primary pasture plants for winter use. Are they on a large per cent of our farms that carry stock as a leading feature? Here special knowledge is required. Know the plant know the land, are absolute requirements.

State Agricultural Society OCCIDENT STAKE OF 1908

TROTting STAKE FOR FOALS OF 1905

To be Trotted at the California State Fair of 1908. Entries to Close January 1, 1906, with ALBERT LINDLEY, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1907; \$25 to be paid January 1, 1908, and \$50 thirty days before the race. The Occident Cup, of the value of \$100, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six tenths; second colt, three tenths; and third colt one-tenth of the stakes. Five to enter, three to start. A horse not winning a heat in the first three shall not start for the fourth heat unless said horse shall have made a dead heat, but horses so ruled out shall have a right to share in the prize according to their rank in the summary at the close of their last heat. Otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1908 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1906.

ALBERT LINDLEY, Secretary.

B. F. RUSH, President.

ABSOLUTELY CURES
QUINN'S SPUNK
OINTMENT
REMOVES
SPUNKS
WIND PUFFS
BUNCHES

Why trade off or sell at a beggarly price a good horse just because he "goes lame," "throws a curb" or develops some other blemish? There is nothing in the way of Spunks, Curbs, Splints, Windpuffs or Bunches which will not yield readily and permanently to treatment with

**QUINN'S
OINTMENT.**

Dr. E. H. Davenport, a prominent physician of Sheridan, Ind., writes: "I have used a number of remedies for the removal of curbs, splints, thickened tendons and tissues generally, but for the last two years I have not been without Quinn's Ointment. I have tested it thoroughly at different times, and say without hesitation that it is the only reliable remedy of the kind I have ever tried." Price \$1.00 per bottle. Sold by all druggists or sent by mail. Write us for circulars, testimonials, etc.

BOOKS FOR STALLION OWNERS

1. Hoover's Stallion Service Record.

The most complete book for recording stallion service ever placed before breeders. Not a pocket edition. No more disputing of sires. No more mixing of dams where this book is used. There is space for entering 100 mares, giving their full breeding, description, dates of service, dates of foaling, etc., with index, complete, size 10x7 1/2. Each book is handsomely and substantially bound. \$2.00

2. The Standard Stallion Service Book.

The neatest Service Book published, containing space for entering 100 mares, giving space for full description, pedigree, date of services and returns, date of foaling, etc., with index complete, neatly bound in leatherine, suitable for pocket use. \$1.00

3. Breeder's Note and Certificate Book and Stallion Service Book Combined.

This book contains 75 blank certificates to be given to owners of mares, certifying that said mare has been bred to a certain stallion. Also 75 notes suitable for owner of mare giving to owner of stallion on account of stallion service fee. This book is well bound, and makes a book like No. 2, after certificates and notes have been removed. \$1.00

INDIANAPOLIS The LOGICAL and the BEST MARKET For CALIFORNIA TROTTERS AND PACERS

Recent sales have clearly demonstrated that INDIANAPOLIS is the country's greatest sales centre and traffic center of the Ohio Valley section.

SIDNEY DILLON and McKINNEY were purchased by INDIANA BREEDERS. INDIANAPOLIS SALES are frequented by liberal buyers not only from the MIDDLE WEST, but also by those same EASTERN BUYERS who in past years gave prestige to the sales at CLEVELAND.

EXPRESS CHARGES on carload shipments, CALIFORNIA POINTS TO INDIANAPOLIS, are less than FIFTY DOLLARS PER HEAD—a nominal expense in comparison to the increment of values OBTAINABLE AT INDIANAPOLIS.

NEXT SALE AT INDIANAPOLIS FEBRUARY 26, 27, 28, MARCH 26, 27, 28, 29, 30, 31, 1906

Horsemen, who may desire to consign stock of real merit to our great ANNUAL SPRING SALE, should advise us AT ONCE that arrangements for co-shipment with other California consignments may be made before it is too late to do so.

For full information and Terms governing consignments, etc., address QUICK

THE HUNTER ONE-TRIGGER IS ABSOLUTELY PERFECT

BECAUSE
The mechanism is positive in its action. Parts are large and strong. It never balks nor doubles; in fact, it does just what we say it will and does it every time.
